

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORT

OF THE

STATE BOARD OF CONTROL

HON. JAMES O. DAVIDSON,
Governor of Wisconsin,
Executive Chamber.

GOVERNOR: The State Board of Control of charitable, reformatory and penal institutions, herewith, respectfully submits its eighth biennial report, covering the biennial period ending June 30th, 1908.

The period covered by this report has been one of unusual activity because of the steady growth of most of the institutions and because many new problems connected with the changes and improvements, provided for by the special appropriations made by the legislature of 1907, had to be carefully considered and solved.

The increase in the number of inmates is shown in a general way by the following table:

	Normal capacity.	1906.	July 1st, 1908.	Dec. 1st, 1908.
State Hospital.....	650	535	611	621
Northern Hospital	650	634	612	636
School for the Deaf.....	210	188	201	191
School for the Blind.....	120	93	88	87
Industrial School for Boys.....	320	305	356	362
State Prison (with new cellwing)	765	639	655	673
State Public School.....	130	147	180	193
Home for Feeble Minded.....	1,000	687	760	780
State Reformatory.....	206	283	292	287
State Tuberculosis Sanatorium.....	80		53	72
Workshop for the Blind.....	25	25	33	33
Total.....		3,511	3,841	3,935

General Report.

The table, however, does not fully disclose the growth in the different classes shown. In the case of the hospitals for the insane there is in addition to the increase of population shown by the table an increase in the number of commitments and those returned for retreatment averaging nearly thirty-two per year or a total addition of sixty-four for the period. The effects of this is seen in the shortened average residence of patients at the hospitals which has now been reduced to one year, too short a period for the best results.

In the case of the Industrial School for boys there has been a rapid increase, coming shortly before and after the expiration of the biennial period, which carried the number to the highest ever reached and a long way beyond the capacity of the institution. In addition paroles have been increased in number so that the average population statement does not properly show the full increase. The actual increase thus accounted for is approximately sixty-eight. Necessity has compelled the paroling of these boys too rapidly for their own good.

At the State Prison the parole law has been in operation for nearly a year and thirty-one prisoners have been released before the expiration of their sentences, thus diminishing by a part of that number the increase of that class as reported.

At the State Public School, notwithstanding an additional agent was appointed in order to keep the population as nearly normal as possible, and notwithstanding the utmost efforts of the three agents, there has been a steady increase in the population since the expiration of the biennial period.

At the Home for the Feeble Minded many feeble minded people, otherwise eligible, were of necessity refused admittance for lack of room. Of these, twenty-eight were under the provisions of chapter 507, laws of 1907, transferred by order of this board to county asylums, placing the burden of maintaining them, in part, on the state. There are now one hundred sixty-five feeble minded people in the county asylums for the insane. The completion of the three new buildings has increased the capacity of the institution to somewhat over one thousand.

At the Reformatory three times during the period it was necessary to notify the judges that no prisoners could be received.

General Report.

At the Sanatorium at Wales, now practically filled to its limit, statistics show the entire increase of inmates at the institution but no statistics are at hand showing with certainty the number of cases of this disease in the state. The State Board of Health, however, states that there are not less than eight thousand cases, and probably ten thousand, in this state. It is probable that there is one such case to every two hundred and fifty of the population.

The beneficiaries of the Workshop for the Blind are listed here for the first time.

It is safe to estimate the real increase in the number of inmates of institutions to December 1st, 1908, exclusive of the Tuberculosis Sanatorium, as four hundred. In addition to this three hundred additional inmates to the Home for Feeble Minded will be admitted in March and April, 1909, making a total increase to be provided for during the next biennial period of seven hundred inmates or almost exactly twenty per cent.

The legislature of 1907 provided in liberal spirit for much needed and delayed improvements at the state institutions. The preparation of detailed plans for carrying out these improvements, the letting of contracts for buildings, for materials, for machinery and appliances, the consideration and determination of the large number and variety of matters involved, the constant inspection of the work as it progressed, and the final adjustment of contracts and bills for materials, all connected with the unusual number and variety of improvements greatly swelled the volume of business of the office and increased the necessary visits of the Board to the state institutions. Most of the improvements undertaken have been successfully completed and their use furnishes great relief.

It must be remembered, however, that previous legislatures had put off, time and again, much needed increase of accommodations and other improvements. Former Boards have called attention to the necessity for a home for epileptics. The need for such an institution is greater than ever. The segregation of these people in a village by themselves, to remove the harmful influence of their presence in normal society, to teach and develop them industrially as far as possible, but most of all

General Report.

to prevent their procreation is a great and pressing need. These people form the most harmful and the most dangerous class of defectives, yet the state has so far made only very partial provision for their segregation and care in the Home for the Feeble Minded and at the State Hospitals and Asylums for the Insane. From these institutions they should, as far as possible, be removed to a special institution or village for epileptics alone.

We deem it our duty to further call your attention to the situation regarding the feeble minded. Attempt has been made during the past year to secure a census of the defectives of the state. Blanks containing queries regarding the number, conditions, parentage, etc., of the defectives were sent to every institution, every town clerk and every doctor, in the state. Much difficulty was experienced in getting returns. The returns received, however, intelligently studied, show the existence of at least three thousand of these defectives, at least two thousand of them not cared for in institutions. Of this number three hundred will be cared for soon at the Home for the Feeble Minded in the new buildings now nearly completed.

It is clear that if all this class could be segregated and cared for until past the age of procreation, a great deal of suffering and sorrow could be saved to the people of the state and the growth of this burden on the community could be checked. It is earnestly recommended that steps be taken by this legislature to locate and begin the construction of an additional home for the feeble minded somewhere in the south-eastern part of the state.

In previous biennial reports your attention has been called to the necessity of securing additional land at several of the state institutions. At the State Hospitals, at the School for the Deaf, the Industrial School for Boys, the State Prison, the State Public School, and the Reformatory, there is needed approximately one thousand acres distributed as shown below.

The institutions now have grounds and farms as follow:

General Report.

Institution.	Grounds	Available for farming.	Needed for farming.	Needed increase.
State Hospital.....	407	330	530	200
Northern Hospital.....	430	280	530	250
School for the Deaf.....	32	20	100	80
School for the Blind.....	65	40	40
Industrial School for Boys.....	423	380	500	120
State Prison.....	325	325	400	75
State Public School.....	165	120	200	80
Home for Feeble Minded.....	1,010	900	900
State Reformatory.....	350	200	400	200
Total.....	3,217	2,595	3,600	1,005

The experience of the board in acquiring additional land for the state reformatory clearly points out that the method of having special appropriations for the addition of land to a particular institution, is not one well calculated to secure for the state the additional land needed, at moderate prices. It would seem that the interest of the state would best be subserved by placing in the hands of the board of control a fund for the purpose of acquiring real estate at those institutions where additional acreage is needed for their economical management, and to furnish out-of-door employment for the patients.

For that purpose we recommend that there shall be appropriated the sum of ten thousand dollars for each year of the next ten years and that the terms of the appropriation authorize the making of land contracts. This would leave it in the hands of the board of control to acquire the necessary real estate at such times as it is to be had for a reasonable price. This experiment was very successfully tried in Minnesota along the lines suggested here but with a larger appropriation.

STATE HOSPITAL.

At the State Hospital for the Insane the improvements provided for by the last legislature have, in a large measure, been carried out as will be clearly understood by reading the report of the superintendent.

General Report.

An appropriation was made by the last legislature for rebuilding the chimney stack of the power house. A careful examination of the conditions at the power house, and its relation to the buildings for which it supplies power and heat, makes it clear that it would be most desirable to make a complete change in the power house arrangements. The present power house provides for the steam and electrical power units required for heating and lighting and for the heating of the domestic hot water supply and the pumping of the domestic cold water supply. Under the same roof there is provided also the laundry, a mattress factory, a carpenter shop and a mechanical repair shop. The building is rambling, is old and is ill-adapted to the purposes for which it was built piecemeal, most of it fifty years ago. The boiler room is so low that it is impossible to keep it properly ventilated and a fit place to work in in summer. As a result it is very difficult to keep firemen, the oppressive heat making their work, at times, really dangerous. The shed for the storage of coal, adjoining the boiler plant, is in a very dilapidated condition. The chimney stack is very badly cracked, as before reported, and its continued use seems to us to be dangerous. To put this plant in good working order would require the expenditure of approximately sixteen thousand dollars, and it would not then be a good economical modern plant.

The position of the plant, nearly in front of the institution, is an objectionable feature, and its site is needed for other purposes. The entire plant should be gradually replaced by a new one placed in the rear of the hospital, the new chimney should be at least two hundred feet in height, and the laundry and shops should also be retired to the rear of the building and placed in simple and inexpensive buildings closely adjoining the power house. There is ample room for placing these subsidiary buildings in that position. We, therefore, recommend that as a preliminary to the general building plan, elsewhere proposed, a new power plant be constructed in the rear of the present building, just behind the water tower, and recommend an appropriation of thirty thousand dollars for this purpose. Much of the work can be done by the inmates.

General Report.

The increased population of this hospital, amounting to nearly forty per cent in the last three years, has made it necessary that additions be made to the herd of cows to increase the milk supply. The present cow barn is badly arranged and inadequate in size for the purpose. In like manner the stable for horses is inadequate for the purpose and in a bad state of repair and must be, in a large measure, reconstructed.

For these purposes there is recommended an appropriation of six thousand dollars.

NORTHERN HOSPITAL.

At the Northern Hospital for the Insane there was provided a fund for the fireproofing of the power house and the improvement of the boiler plant. This work is only partly completed.

During the summer of 1907 it became evident that the large barns grouped southeast of the main building were in bad condition and a careful examination showed them to be very unsafe, indeed their condition was found to be so dangerous as to compel prompt reconstruction.

The cow barn was reconstructed on its site, and the implement sheds, horse barn, barn for young stock and two store houses, were first moved from their too close proximity to the main building and gradually reconstructed in a new group so as to form a sheltered yard for stock. They were all founded on concrete walls and fitted with concrete sills and floors and rearranged and refitted to secure the greatest advantage from the space. This work is still in progress but nearing completion. It has been performed by the regular repair employes, carpenter, mason and painter, of the institution, assisted by the patients, and its additional cost is restricted to little more than the cost of the materials used in construction.

The cow barn and horse barns are now models of their kind and the remodeling of the other buildings has given largely increased capacity for growing stock and a model brood house for the poultry. The cost of this emergency work has been slightly in excess of six thousand dollars.

The visiting committee of the legislature of 1907, called at-

General Report.

tention to the bad condition of the floors of this institution. The main entrance hall has been refloored with tile, the wood floor having been badly and irregularly worn.

The floors of a considerable number of the smaller rooms have been relaid with hard maple but there remains a great deal of flooring which should be renewed during the coming year.

Owing to its proximity to the State Prison, and also to its larger capacity in an earlier day, the care of the criminal insane for the two state hospital districts has fallen on this hospital. They are, of necessity, kept in one of the regular wards, not properly planned for their custody and not at all secure, and must mingle more or less with the other patients. It is hoped that proper provision will be made by this legislature for the separation of this class of patients from the others and for greater security in their care.

The commitments to the two state hospitals for the acute insane have increased during the last biennial period so that now with the number returned to the hospitals for retreatment, and the still smaller number recommitted from the county asylums, for special treatment, almost equals the capacity of the institutions. It results, therefore, that the average residence of the inmates of the hospitals for the insane is reduced to about one year, making it necessary for the superintendents, often, to recommend people for transfer to county asylums before, in their best judgment, they ought to be transferred. There are but two ways to meet this situation; one to provide a new hospital for the insane; the other to enlarge the present hospitals.

Both superintendents of the state hospitals and the State Board of Control have given this subject very careful consideration for some years past because it was clearly seen that these conditions would soon be reached.

In determining which of these two courses is best it is clear that the governing condition is the determination as to what is the best size for a hospital for the insane, for the benefit of the patients, and from the standpoint of economy in management.

Much thought and much study has been expended upon this problem here and in many other states. We believe that the

General Report.

best judgment of experts suggests that a hospital having one thousand to twelve hundred inmates is of size to best fulfill all of these conditions. We, therefore, believe that it would be wise to develop the present hospitals for the insane by the addition of cottages for special purposes until they provide for one thousand or more inmates. For this purpose there should be built at each of the two state hospitals:

Cottage for male ward for convalescent, capacity sixty.

Cottage for female ward for convalescent, capacity forty-five.

Cottage for violent male patients, capacity forty.

Cottage for violent female patients, capacity forty.

Cottage for farm workers, capacity sixty.

Pavilion for the treatment of the female tubercular insane, capacity thirty.

Pavilion for the treatment of the male tubercular insane, capacity thirty.

A modern receiving ward or psychopathic hospital for the reception, treatment and observation of new cases, arranged for both sexes, capacity one hundred.

These additions will bring the capacity of each of these institutions up to something over one thousand patients.

There is one other matter which needs careful attention. Except for their half day leave once each week the attendants have almost no opportunity to get away from the surroundings of their work during any twenty-four hours. Their work requires long hours on duty and the dealing with people who are often exceedingly trying and vexatious. This constant strain on mind and body, with no really complete relief, is more than human temper can stand and remain sweet. It is universally recognized at hospitals for the insane to be extremely desirable that quarters for attendants shall be away from the main buildings and separated from the field of their duty. In most of the better hospitals for the insane in the country such quarters have been provided. It is believed that no one thing which the state could do would go farther to better the condition of the patients, by bettering the quality of the service they receive from the attendants, than to provide such outside quarters. It is, therefore, suggested that cottages for the living quarters of

General Report.

help be built at each of the hospitals for the insane in addition to the buildings listed above. These will slightly increase the capacity of the present main buildings by vacating the rooms for the attendants on the wards.

If the additional room which will shortly be required should be furnished by the building of a new institution that institution would be built along modern lines, on the cottage plan, but would require a large lump-sum appropriation and would put off indefinitely the modernizing of the present institutions.

By adopting the plan of adding cottages to the two present institutions they can gradually be modernized and no large sum of money will be required in any one appropriation period.

A careful study of the statistics of the insane for the entire state, omitting Milwaukee county, discloses that the average increase of cases committed and returned for treatment during the last seventeen years has been thirty-one per year. It is further disclosed that the rate of increase at the present time is nearly thirty-three per year.

The state hospitals should provide for an average residence of not less than fifteen or sixteen months. There must then be provided, to secure these conditions, additional accommodations for forty-four patients each year or eighty-eight patients during each biennial period.

A cottage erected at each hospital during each successive biennial appropriation period would just provide for this growth.

To secure that the average residence of patients at the hospitals shall be sixteen months, there is needed at once provision for housing about three hundred patients.

If provision is made for the addition of the buildings suggested for homes for attendants during the next two years, and an additional cottage at each hospital during each succeeding two years for a period of sixteen years, it is reasonably certain that the present condition of a too shortened period of residence will not again be reached before the expiration of an additional ten years, or twenty-six years from the present time, at which time it will become desirable to begin the construction of a new hospital for the insane. This estimate is based on the assump-

General Report.

tion that there will be no great change in the present rate of increase.

It seems to this Board, therefore, that it would be a wise plan for the state to adopt a regular program of construction to cover a period of sixteen years, during which these buildings should be built and added to each of these two hospitals. It is quite clear that they will be needed within that time.

It is estimated that the cost of these buildings together with the equipment and added power required would be approximately a total of \$400,000.00 at each institution. It is clear that this investment will postpone the necessity of establishing a new hospital for the insane for a period of not less than twenty years. In addition to this it will give to each of the two hospitals now established an opportunity to greatly better their classification and to readjust the management of the hospitals, their methods, conveniences and treatment to thoroughly modern lines. It will have the further advantage that because of the increased numbers more can be done for the patients without increasing the per capita cost or, that because of the increased number, the per capita cost can be decreased without detriment to the care and treatment of the patients.

At both hospitals for the insane there has been, until very recently, very great difficulty in securing the proper help. Indeed, at one time it was with the greatest difficulty that sufficient help was obtained to run the institutions. This condition has forced the gradual raising of the salaries of the attendants and others to fully twenty per cent higher than five years ago. Even these salary raises did not produce the desired effect until well after the financial crisis of 1907. Since then conditions have been somewhat easier, but it has, nevertheless, often been difficult to keep the force of attendants filled with good people.

A study of the statistics will show you that during the past two years the attendants have not averaged a residence at these institutions of much more than four months.

In order that these institutions may be enabled to secure and hold good attendants it is evident that their life and surroundings need to be made more attractive, in part by better separate

General Report.

quarters as proposed elsewhere, and it may be that the pay will have to be further increased. It is only by having first-class attendants, well trained and reasonably permanent in their positions, that good care of the patients can be secured.

At the State Hospital, a regrading of attendants made last year holds out to the ambitious attendant more steps of possible promotion, and more public recognition of meritorious service.

Some real improvement in service seems to have resulted.

SCHOOL FOR THE DEAF.

The past two years have been fruitful in many ways of real betterment in instruction and administration at the School for the Deaf under its present able and thoughtful management. A fine spirit seems to exist among scholars and teachers which contributes largely to the undoubted success of the school.

During the present appropriation period a high school department has been established. This will make possible a much better training of the scholars and provide such instruction as is necessary, if they wish to continue their education in the colleges for the deaf. There is no doubt that this increase in the course of study will yield valuable results in the training of these children for successful citizenship.

The legislature of 1907, made for this institution its first important appropriation in many years for improvements and additions, providing for a new dormitory building for young women, a new industrial building and a new combination barn.

Owing to the crowding together of the buildings on the limited area suited for building site, the adjustment of the new buildings in convenient relation to those already built, proved a difficult problem. It was finally solved by building the industrial building large enough to accommodate the manual training, as well as the industries, and planning to use the manual training building, remodeled, as a part of the dormitory for young women.

This compelled the building of the industrial building first in order that the regular work of instruction in manual training should not be interrupted.

General Report.

The barn and the new industrial building are completed, partly equipped and in use. The young women's dormitory is completed as to the new part but the funds are not sufficient to remodel the former manual training building, and an additional appropriation should be made to cover this work. If made reasonably early it will enable this important building to be put in use for the school year of 1909-10.

The report of the superintendent shows clearly a necessity for enlarged accommodations in the school department, a real serious need of an additional school building, equal in size and facilities to that at present in use.

The institution has a well equipped and well managed printing shop. If the space adjoining the shop, now in temporary use for school work and not well adapted for the purpose, can be set free, an enlargement of the shop can be made, which would enable it to handle a greatly increased amount of work, much to the advantage of the school.

The printing of blanks for the state institutions, of special reports, of the biennial report of the State Board of Control, of books of rules for the various institutions, and other similar work, could be undertaken here very successfully and to the very considerable advantage of the students, of the work of the Board of Control, and of the institutions.

This matter is brought to your attention in the hope that some way can be found to allow this to be done.

The institution pumps its own water from a deep well on the grounds. The water storage for fire protection purposes consists of a small tank in the attic of the main building. It is entirely inadequate for this large group of buildings. There should be a larger storage tank of not less than 30,000 gallons capacity, with its bottom 100 feet from the ground level. It is earnestly recommended that an appropriation of six thousand dollars be made for this purpose.

The chapel in which daily exercises are held is in a bad state of repair. Much plaster has fallen from the ceiling, and it and the walls are badly discolored. An entire new ceiling and new decorations are necessary. An appropriation for this purpose of \$1,300.00 is recommended.

General Report.

For an additional boiler and room to house it in, necessary to make the plant capable of heating the enlarged group of buildings, there is recommended an appropriation of three thousand dollars (\$3,000.00).

Other necessary items of improvement and equipment are:

Extension to coal shed	\$3,500.00
Drainage of pasture	600.00
Additional forges in blacksmith shop	400.00

SCHOOL FOR THE BLIND.

The population of this institution remains practically constant. The care and skill with which its affairs are conducted and the high quality of instruction secured for the pupils is every way creditable to the superintendent, matron and teachers.

The institution can readily care for and educate thirty to forty more scholars without crowding and with very little additional expense. There is no doubt that there are that many blind or partially blind in the state who are in need of instruction and are not getting it.

It is of more moment to the blind, bereft of their sense of sight, and thus peculiarly helpless, that they have their other senses and faculties thoroughly developed and that they be trained in as many ways as possible, so that they may become self-supporting and otherwise fitted for citizenship.

Every effort is therefore being made to bring all blind persons and their parents to a knowledge of the school and its advantages.

The serious interference with the success of the school year, caused twice in recent years, by the occurrence of contagious disease, suggests the necessity and importance of a small hospital suitable for segregation and treatment of such cases. It is recommended that an appropriation of three thousand dollars be made for that purpose.

There is pressing need for a new grand piano and for samples of the piano players now so generally used, to be utilized in instruction in tuning, and of some additional pianos for practice

General Report.

classes. For this purpose an appropriation of fifteen hundred dollars is recommended.

The roof of the industrial building requires prompt renewal. This will cost six hundred dollars.

The porches in front of the building were built in part of cast iron and in part in imitation. These latter parts are so badly rotted as to render the porches dangerous and required prompt repair which should be made in metal in the interest of permanency. Some of the porch floors will also require renewal. The total expense will be approximately twelve hundred dollars.

Renewal of part of the laundry machinery is absolutely necessary, after many years of use, at an expense of approximately one thousand dollars.

No additions have for a long time been made to the library. This library is for the use of all the blind in the state and is constantly in circulation and is badly worn out. An appropriation of five hundred dollars is badly needed for the purpose of additions and renewals.

There is being installed at this time a complete plant for water supply. As soon as put in commission it will replace entirely the city water supply, and save an annual tax for water of between seven and eight hundred dollars at an annual expense of approximately one quarter that amount.

The new music building, arranged to provide rooms for all piano practice for class work and for instruction in piano tuning, is nearly completed and will soon be placed in use. It will be a great relief for all in the main building to have the noise resulting from this work removed to apartments properly deadened to protect those practicing from confusion arising from the spread of the noise to fellow pupils and leave the atmosphere of the main building more conducive to study and rest.

A handsome swimming bath 30'x40' has been placed in the basement of the new building and fitted with shower baths, douches, etc., for the use of both the boys and girls. It will be a valuable addition to the facilities of the school.

General Report.

INDUSTRIAL SCHOOL FOR BOYS.

In the summer of 1907, the superintendent of this institution called the attention of this board to the critical condition of cottage No. 7. Careful examination showed that the building, an ancient one of wood construction and a most necessary one in the conduct of the institution, must either receive extensive repairs or be abandoned. Further consideration showed clearly that no reasonable repairs would render the building fit for its use and furnish decent living quarters for the officers. The board, therefore, replaced the building by a new one of practically the same size, substantially constructed and thoroughly well arranged and fitted up for its special uses. The labor of the inmates was utilized to a considerable extent in the construction, thus furnishing the means of instruction and training and greatly diminishing the cost of the building.

For many years the number of commitments to this institution has been so large in proportion to the number it can accommodate that it has been necessary to limit the residence of the inmates in the institution to about fifteen months. The shortness of this term of residence is very detrimental to the work of reformation and instruction which the institution is intended to and should perform. One direct result is that many boys are compelled to leave the institution, having carried their school work only through the fourth grade. As another result the boys leave the institution at such an early age that the teaching of trades becomes a practical impossibility, only some elementary sloyd, carpenter and blacksmithing work can be attempted and none can be trained to be thorough artisans. Since this school was established not to punish the boys but as a means of training them to become useful and productive citizens and to give them another chance, it is believed to be unfair to practically prevent their receiving a common school education, and to place them out on farms and other places of employment at such an early age as to practically prevent their learning a trade, thus compelling them to be, all their lives, common laborers. It is believed that the object of this school in making good citizens of these boys can be accomplished very much better if

General Report.

it is given increased facilities, increased capacity, and that no investment the state can make will be more productive of good than this would secure. Each boy should be kept in the institution until he has passed through the eight common school grades, if he is capable of receiving and benefiting by the instruction, and this instruction should be supplemented, wherever capacity is shown, by thorough instruction in a trade.

The original plans of this institution provided a group of residence cottages placed close together and close to the administration building, provided with a common play ground, a common school house and common heating facilities. The plan is defective in that it does not allow separate instruction, and separate play grounds, for the smaller boys.

During the past season there has been a very unusually large number of commitments to this institution and this, with the difficulty of finding places for the boys, has increased the population to three hundred and seventy at times, while there is proper provision made in the buildings for only three hundred twenty. It is necessary, therefore, to provide, at once, additional cottages.

Through the liberality of the last legislature there has been added to the grounds of the institution a tract of land lying east of and in line with the group of buildings. By using this tract for the building of additional cottages for smaller boys it will be possible to segregate them from the larger boys, provide them with independent play grounds and give to each cottage an individual garden. As soon as it is possible there should be added four cottages having a capacity of from forty to fifty boys each and a separate school for the younger boys. Such cottages will cost \$20,000 each to build and equip. A proper school building and its equipment will cost twenty-five thousand dollars.

There should also be added a machine shop where advanced instruction can be given to such of the boys as show an aptitude for this class of work, and it is desirable that this be so planned that it can be added to from time to time to provide for instruction in a number of additional trades.

General Report.

The whole school should be developed in an intelligent and rational way in order to become an industrial school really as well as in name.

The last legislature also made a special appropriation for coal shed, a cow barn and a printing office. The coal shed has been built at a cost of \$4,800.00 leaving an unexpended balance of \$3,000.00. Plans have been prepared for the cow barn but it is evident that it will cost not less than \$6,000.00.

Concrete blocks for this structure have been made by the boys during the past season.

There should be appropriated for the purpose of completing this barn \$3,000.00 in addition to the present fund and for the purpose of establishing the printing office \$2,500.00.

It is desired to reconstruct the present cow barn as a horse barn and to remodel the present horse barn, a substantial construction of stone, into a first-class blacksmith and sheet metal work shop for practical use and use in instruction. The remodeling of this building and the fitting out of the shop would cost \$4,000.00. The building and equipping of a suitable machine shop for metal work is needed and fitting it with the proper machinery and tools would cost \$12,000.00. A considerable diminution in the fire risk and improvement in convenience and arrangement can be had by moving to one side two of the small barns now used for storage purposes and placing them on new foundations and this is recommended. This will cost \$1,000.

The ventilation of the boys' cottages is entirely insufficient. It is recommended that \$3,000.00 be appropriated for the purpose of installing a ventilating system, which can now be done economically by use of the tunnel, recently constructed.

STATE PRISON.

The State Prison under its present able management has made an excellent record of economy in management, and creditable results on its productive side. It has steadily improved along lines of humane treatment and reformation and excellent discipline has been maintained.

General Report.

No single agency has been productive of so much good to the discipline of the prison, and to the prisoners, as the parole law passed by the legislature of 1907. This law enables prisoners who have a good record, and for whom employment can be secured, to be paroled out in such manner that they secure a foothold and a place in their community, living under the supervision of the prison authorities, and reporting to them, for a period of rather more than a year before final discharge. Up to the present time one hundred and nine applications for parole have been considered by this board, acting as a parole board, fifty-seven paroles have been granted and fifty-two denied. Of the prisoners so released thirty-one have served out their time honorably on parole and received their final discharge, twenty-two are still serving and reporting, and four have violated their paroles. One of these parole violators has been returned to the prison. The others escaped from the state.

Members of this board are personally familiar with the cases of many of these men, and are able to say without reservation that this system of paroling prisoners has been most beneficial to them, their communities and the state, by assisting them to become reestablished and self-supporting. Since such paroles are all earned by the prisoners, the fact that a man is a paroled prisoner constitutes a strong recommendation of his character and industry and helps to reestablish him in the confidence of the community. Basing its action on its own experience and that of prison boards in other states this board recommends a further extension of the law by which the parole privilege can be extended to all classes of prisoners as it is in Ohio and other states.

In addition to the good results to the prisoners, the relief of the overcrowded prison by the paroling of these prisoners has been great. Without such relief the crowding of the prison for the last year would have been very near unbearable.

The new cell wing with two hundred additional cells is now rapidly approaching completion. For a long time from forty to seventy prisoners have slept on cots in the corridors of one of the old wings, thus increasing largely the risk of escapes, and making necessary additional watchfulness and supervision.

General Report.

The contrast between the roomy, light and sanitary modern cells of this new cell house, with its simple but convenient door locking device, its sanitary plumbing, utility corridor, spacious outer corridors and good ventilation, and the dark, gloomy, small and necessarily unsanitary cells of the old cell wings, without plumbing and with the air poisoned by use of soil buckets, is very great. These old cells are still in use, not because their defects have not been long recognized, but because hitherto all methods of replacing them by really sanitary cells have proved prohibitive in expense.

In designing the cell construction of this new wing great care was exercised. By use of concrete and twisted steel bars, a construction both very strong and very secure as well as sanitary has been secured. The work has been visited by many experts during construction and since its completion, and has been highly commended by all.

Its cost including the building complete has been somewhat over \$350.00 per cell; for cell block alone somewhat under \$300.00 per cell. While this cell wing is but half filled it will be possible to reconstruct the cell blocks of the old cell wings. Later when the new cell wing is full the difficulty of housing and caring for the prisoners during reconstruction would be vastly increased. Moreover the prison now has a well organized and experienced gang of cement workers among the convicts, well fitted to carry out this work. It is therefore hoped that the legislature will see fit to provide for this necessary work at once. The estimated cost for the two hundred eighty-four cells in either cell wing is \$70,000.00. To carry through this work in either cell house will take two years. It will be necessary to take down and rebuild one-half of the cells in one cell wing each year. If this work is started at once but forty to fifty men would be required to sleep in the corridors during the reconstruction. If this work should be delayed until the prison population has increased fifty men or more the number to be kept outside of cells will make the operation very risky.

The six hundred fifty-five prisoners in the institution June 30th, 1908, were occupied as follows:

General Report.

Working in shops, directly paid for by contractors	426
Working on farm and in building operations productive to the state	41
Working in the power plant	13
Working in various occupations in running institution and in keeping up buildings and grounds	154
Losing time entirely by reason of sickness or old age	21

The most important changes and improvements of the past biennial period have been:

The completion of a double gate. This is a structure in form somewhat like a canal lock through which to admit the coal and other railroad cars which bring and take away the heavy freight of the institution. This was very successfully constructed of concrete by the inmates and answers its purpose admirably.

The construction of an underground coal shed and a turntable:

By means of the turntable coal cars are turned and landed upon a track running over the roof of the coal shed. The labor of unloading coal cars is reduced to less than one quarter what was formerly required. The cars are now handled rapidly and charges for demurrage are entirely avoided. The coal being now stored in this shed immediately adjoining the boiler house requires the services of three less men to deliver it to the stokers and the labor thus saved is diverted to active production in the shops.

The completion of the remodeling of the administration portion of the prison.

These repairs and remodeling were radical in their character.

The chapel in the third floor had long been too small. It occupied three-fifths of the third floor of this center portion. The quarters occupied by the officers were unsanitary and wholly lacking comforts and conveniences. By supporting the roof on steel trusses resting wholly on the outer walls and removing two heavy stone division walls and some minor brick walls, all this space was thrown into one large room. This was floored with reinforced concrete, arranged in amphitheatre plan and fitted with a gallery. This room has now been completed and

General Report.

occupied more than six months and constitutes a very handsome audience room for chapel, lecture and school purposes, with excellent acoustic properties. Fire proof stairways form the approach to the hall, and a thorough system of ventilation has been installed. The entire second story has also been remodelled and eleven single and double rooms for officers' quarters as well as sitting rooms, bath and toilet rooms, all modern and sanitary, have been completed and placed in use.

The building of the new cell wing.

This building was begun in the summer of 1906, and the walls were completed during the following winter. Work on the cell block was begun in July of 1907, and continued uninterruptedly to the present time.

The foundations and concrete wall to window height were constructed by the inmates under the skilled supervision and direction of guard Thomas Green. The brick were made at the reformatory at Green Bay and laid in the walls by a gang of six young men from that institution, who were for that purpose paroled to Mr. Green and lived in the village while engaged in this work. They were paid fair wages. It is a pleasure to record that they did their work in a thoroughly workmanlike manner, behaved themselves like gentlemen and were discharged for meritorious conduct at its completion. The erection of the steel work, trusses and planking of roof was well performed by inmates under the direction of guard George Steuck.

The entire work of erecting the reinforced concrete cell walls and finished floors of cells and cell house was carried to completion under the charge of Mr. Green. This work was so ingeniously and carefully planned by the use of a set of collapsible forms as to require the use of but two hundred dollars worth of lumber for forms, and is a splendid specimen of workmanship.

The work done on this building on contract is confined to the metal roofing and cornice work, the cell fronts, the corridor, window operating mechanism and the ventilating and heating apparatus.

The entire cost to the state of building and cells ready for use has been a trifle over seventy thousand dollars.

General Report.

The building of the Binder Twine Plant.

In a special report to the legislature of 1905, giving the result of the investigation by this board, this board estimated the cost of a suitable plant for that purpose at \$150,000.00. The legislature of 1907, appropriated for that purpose \$125,000.00, and there was the suggestion brought out in the legislature debates, that the building erected for this purpose should be also suitable for other manufacturing purposes.

In making the plans for the Binder Twine Factory this board has kept constantly in mind two essentials:

First, that the factory building shall be fire proof, thoroughly lighted and convenient for the work and for the supervision of the prisoners and finally of such form as to be capable of being adapted to other uses.

Second, that the production of the large power necessary should be on the basis of the highest possible economy.

The building is practically completed, is a fine specimen of reinforced concrete construction, of a bold type, a factory ninety feet wide by two hundred forty feet long, with but one row of columns. This makes possible the arrangement of machinery in the most convenient way and all on one floor, with a capacity of upward of four million pounds of twine per annum. It is designed to use the first story temporarily for the storage of the crude and finished product, and the arrangement of the building is such that if it is desired to double the output or to add another industry this can be done by simply adding a plain brick warehouse adjoining.

Care in excluding burnable material has gone so far that even wooden beams or plank to support shafting have been entirely excluded and the floors are to be partly of cement and partly of monolith. It has been built so that at any time, if desired, the roof can be raised and another story added.

Great credit is due to the C. W. Noble Company, the contractors for this building, and especially to Mr. O. A. Dieman, the efficient superintendent of construction, and to Warden Town; for their keen, active, interest in everything relating to this building.

The thanks of this board are also due to Hon. Henry A.

General Report.

Wolfer, warden of the Minnesota State Prison, who has freely advised with and assisted us in planning this work, and whose long and successful experience as a manufacturer of binder twine has rendered his advice most valuable.

The power plant will consist of two one hundred twenty-five kilowatt generators, direct connected to two two hundred horse power producer gas engines of the Rathburn-Jones type, and supplied with producer gas from two Smith Gas Producers of ample capacity, so fitted up that they can be used with either hard or soft coal. Hard coal is first to be used until soft coal shall be determined to be thoroughly reliable. This gas producer gas engine generator plant is guaranteed to produce power at the rate of one kilowatt per hour from 1.5 pounds of clean hard pea coal. This power will be distributed through main cables in a special tunnel to a series of enclosed twenty-five horse power electric motors. These motors each propel a certain section of the machinery and are under automatic electric speed control. The two line shafts are so arranged that should any motor on either line have to go out of commission for repairs the various sections can be bolted together and propelled by the remaining motors on that line, whose overload capacity makes this easily possible. Should two motors on either line of shafting go out of commission that line can still be operated by the remaining motors if the enclosing shields be temporarily removed, thus greatly increasing the overload capacity of the motors.

The water required for the cooling of the gas and for extracting the heat from the exhaust gas after its explosion in the cylinder, and for cooling the cylinders, will be heated to 130° and will be used in winter for the partial heating of the factory. At other times it will necessarily go to waste. It will be supplied from a well which has been drilled for that purpose, thirteen inches in diameter at the top, ten inches in diameter at the bottom and eight hundred feet deep, the last five hundred feet in the Potsdam sandstone.

The prison yard has long been much too small. There is now no space within the walls of sufficient size to be used for an exercising ground for the prisoners. It was necessary to

General Report.

build the binder twine factory outside of the present walls. To provide an enclosure for the binder twine factory, and at the same time an open space in which to allow the prisoners to exercise and take fresh air, there is needed at once an extension of the prison wall, two thousand feet in length, to enclose all of the prison property except a reasonable yard and garden surrounding the Warden's residence. It is proposed to build this wall of concrete. Preliminary studies of form and methods of construction have been made. Careful estimates, based upon these, show that the cost will be approximately thirty thousand dollars. The stone for this purpose will be quarried at the prison farm, carted to the grounds and crushed by prison labor. The appropriation asked is based on the cost of necessary materials and appliances only, all labor to be that of prisoners.

With the appropriation made by the last legislature of \$14,000.00 there was acquired one hundred sixty-five acres of land adjoining the farm and largely between it and the village. Somewhat more than half of this land was dry and well cultivated. The rest was low lying wet land adjoining similar tracts on the original prison farm. The new land furnished the ditch location for draining the entire tract. Ditching was begun in the autumn of 1907, and greatly relieved the situation. Broadening and deepening of the main ditch in 1908, together with the tile draining planned to be done in 1909, will bring all this land, somewhat more than eighty acres, into cultivable condition and provide proper pasture for the rapidly increasing herd of Holstein cattle. Radical changes in the farm management and methods have been made and it is believed that within two or three years this will become one of the best and most profitable of the state farms.

STATE PUBLIC SCHOOL.

The end of the present biennial period marks the end of the service at this institution of Mr. and Mrs. M. T. Park, as superintendent and matron.

For nine years this institution has flourished and done most excellent work under their faithful and efficient care.

General Report.

Mr. and Mrs. C. M. Bright of Appleton succeed them.

The work which this institution is intended to accomplish is that of receiving neglected and abandoned children and finding homes for them.

The institution now carries on its payroll three agents who are constantly traveling, finding homes for children and looking after the welfare of those already placed.

By these means the welfare of an average of two hundred and fifty children in the institution, and about three times that number in homes, is constantly looked after.

The institution has a moderate sized farm, a good garden and play grounds, and although the soil is light, the garden and farm have been quite productive. There are always, at the institution a considerable number of fair sized boys, for whom homes cannot be found or who have been returned from homes for various reasons, and some similar cases of larger girls. For these training in farm work and domestic science is given and they are made helpful around the institution. This training should be carried further in the school in order that these people may be better prepared to care for themselves when released from the care of the school.

This institution has had little spent upon it, other than for absolutely necessary repairs, for many years. In view of the increase in the number of commitments and the fact,

That there is but one cottage for girls, now greatly overcrowded;

That there is but one baby cottage, always much overcrowded;

That the plumbing facilities are very deficient in many ways;

That the provision of room for employes is insufficient;

That for the larger boys and girls added facilities for industrial training are needed;

That the farm buildings need extension and improvement;

That the character of the soil renders some simple means of irrigation very necessary during dry seasons;

That the condition of the grounds renders it very desirable that some planting of trees and shrubs be systematically done;

It is recommended that appropriations be made as follows:

General Report.

For a girls cottage	\$12,000.00
For annex to baby cottage	5,000.00
For turning present chapel into bed rooms, much needed for employes	1,000.00
For furnishing and fitting third story of hospital, fitting with fire escapes and providing a much needed ventilating system	3,400.00
Repairs to bakery, kitchen, etc	1,200.00
For assembly building	10,000.00
For plumbing in cottages	1,000.00
For tunnel	2,000.00
For extension to stock barn	1,500.00
For bridge	1,000.00
For fencing	300.00
For domestic telephone system	500.00
For cows	300.00
Total	\$39,200.00

An investigation of the methods of home finding societies operating in this state was directed by Joint Resolution No. 22, of the legislature of 1907. The work of investigation was carried on mainly by the agents of the State School, acting under the direction of this board, and its results are given in a special report. In order to carry on this work without interfering too much with the regular work of the agents, it was necessary to appoint an additional agent. The number of commitments to the institution has since so greatly increased as to render it necessary to keep the entire force of three agents constantly traveling. Even with the help of the additional agent it has been impossible to keep the population down to the normal, and the crowded condition of the institution calls urgently for added accommodations.

The Board of Control were invited to send delegates to the National Child Conference called by President Roosevelt and were represented by Dr. Frisby and Supt. Bright. It is pleasant to record that the state organization of the work of home finding for children in Wisconsin is almost exactly along the

General Report.

lines laid down in that conference. Such changes in our laws as are needed to bring them entirely in line with the recommendations of the conference will be worked out by us and brought to the attention of the legislature.

HOME FOR FEEBLE MINDED.

With the completion of the cottages now under construction at this institution, house room will be provided for a total population of nearly eleven hundred inmates. There will be left for the legislature to provide only two much needed buildings, a hospital for the sick and an additional school building, besides such small buildings as may sooner or later be needed as additions to the industrial and farm equipment.

This institution was carefully and wisely planned on modern lines and its buildings have been well constructed. It can be confidently expected that its repair and renewal account will be relatively small. It was wisely planned that this institution should provide for approximately one thousand inmates, only.

Experience here and elsewhere has clearly indicated that no economy can be secured by enlargement of the institution beyond those limits, and that it is better to provide additional institutions so distributed as to keep the necessary cost of travel, for inmates committed and for visiting relatives, as low as possible.

The management of the institution has been careful and economical. Its condition and the work it is doing are worthy of high commendation. Especial attention is called to the full report of the superintendent and its description of the methods of the institution.

It is clear that this institution will be filled to its capacity before the end of 1910, and that thereafter it will be only able to accept new inmates to replace the occasional vacancies caused by death or removal. This board, therefore, recommends that prompt steps be taken to acquire a site for a new home of similar character. Such an institution should be located somewhere in the southeastern part of the state, centrally placed with reference to the population of that section, and not too far from

General Report.

Milwaukee, from which place a very large number of inmates are committed.

If provision is made by the legislature of 1909 for the purchase of a site, and by the legislature of 1911, for the construction of buildings, it is clear that they will not be ready to open in time to prevent some distress because of lack of room, at the Chippewa Falls home which will surely begin early in 1910. It is, therefore, urged that both the site and some cottages be provided for, if possible, at this time.

Before the addition of the three new cottages the school building was so crowded as to necessitate the use of basement rooms for school and recitation purposes. The addition of three hundred inmates early in 1909 will render a duplicate school house necessary. Such a building and its equipment will cost thirty thousand dollars.

The increase in population will also render necessary an increase in the herd of cows. To accommodate these it will be necessary to add the third wing to the new stock barn. For this purpose, and in part to provide for the purchase of cows an appropriation of six thousand dollars is recommended.

STATE REFORMATORY.

The very general interest in and approval of the work being done by this institution, and the appreciation of its needs, shown by visiting legislators, the legislative visiting committee, his excellency Governor Davidson, and by visiting citizens generally, resulted in a liberal appropriation to supply the pressing needs of the reformatory for better quarters for school and industrial purposes.

As a result there has been purchased all the necessary granite to complete the principal building, in accordance with the original plans, a school of instruction in granite cutting has been organized, and from fifteen to thirty boys have been steadily at work cutting the granite into form for use and learning the trade of stone cutter. Some of these boys have been paroled and some released and are earning good wages at their trades as citizens.

The first of the principal objects of the Commission is to ascertain the extent of the land owned by the State, and to determine the value of the same.

The second object is to ascertain the extent of the land owned by the State, and to determine the value of the same. General Report.

so clear that we do not hesitate to recommend the moderate appropriations necessary to carry it on steadily during the next two years. By the close of the present appropriation period, June 30th, 1909, the rear portion of the center building will be nearly completed and the foundation work for the front part will be completed. The excavation for this work has already been begun.

Steady prosecution of the work will complete the enclosure of the front center part by the end of the year, and complete it entirely during the season of 1910, leaving ample opportunity for beginning and carrying well along the outer walls of the second wing, now very much needed, during the season of 1910 and their completion during the season of 1911.

The number of inmates committed to the reformatory has twice during the last two years, and most of the time since, exceeded the capacity of the institution and compelled the sending of some to the state prison and to county jails. The value of the reformatory training is becoming more generally understood by the judges having criminal jurisdiction and the need of further accommodations is definitely established.

If the building operations are carried on continuously, as outlined herein, new cells can hardly be ready until sometime late in 1911, after another legislature shall have made an additional appropriation for the materials necessary for the cells. For these reasons it is hoped that the legislature will grant the modest amounts asked for continuing this work. It is thought better to put up with the inconvenience caused by waiting for added cells rather than give up in any part the admirable opportunity this building work furnishes for practical instruction of inmates.

The pressing necessity for additions of more land to the holdings of this institution to assist in furnishing suitable employment and instruction to the inmates, and to prevent a village growing up around the immediate vicinity of its walls, is very urgent, and furnishes one of the several strong reasons for the special land appropriation recommended elsewhere.

The completion of the new rear center building will make possible much better and more thorough instruction in the

General Report.

schools of the institution and especially in the school side of trade instruction, and make possible the establishing of evening schools in which the more ambitious of the inmates can be helped to more thorough knowledge of these trades, and be given added schooling. In order that it may be possible for the institution to furnish a good grade of such instruction it is urged that the current expense appropriation be increased and determined with a wise liberality.

The board desires especially to acknowledge and express its thanks to Governor Davidson for his spirit of complete co-operation with the superintendent of the reformatory and board of control in maintaining the discipline, in assisting in the pardoning and releasing of those recommended, and refusing to listen to appeals based merely on sympathy and influence. The basic principle of all the reformatories in this country is to secure that anyone released before the expiration of his sentence is released because he has by industry, excellent deportment and showing himself worthy of confidence, earned his own release. The discipline of the institution and its value to the inmate can only be maintained at its most effective point by such mutual confidence as has happily existed during the past few years between the different governing bodies and officers in authority over this institution.

WISCONSIN STATE TUBERCULOSIS SANATORIUM.

The work of construction of the buildings for this institution, two miles north of Wales, a station on the Northwestern Railway, lying eight miles west of Waukesha, was begun in the summer of 1906 and was so far completed as to allow the opening of the institution on November 9th, 1907. The present buildings of the institution were planned so as to allow the institution finally to accommodate one hundred and sixty people. At the time of the opening the accommodations provided were for forty patients. It was not until the following spring that these first cottages were entirely filled. During the fall and early winter of 1907 two additional cottages or shacks, providing additional capacity for forty inmates, were built and were oc-

General Report.

cupied early in the spring. The number of patients has steadily increased until now the institution is uniformly running full.

The report of the superintendent shows the results of the treatment of the various cases under his charge.

It is clearly developed that too many people have, so far, been received whose cases were in an advanced stage. We believe that arrangements have now been made which will largely prevent this in the future. It is also clear from the experience of the past two years that an infirmary or hospital ward is a vital necessity of the institution.

At best there will be frequent occasion for removing incipient cases from the shacks to the infirmary and giving them special medical care and individual nursing. With the present arrangements it has been necessary frequently to use the administration building for this purpose, for which it is entirely unfit. Furthermore, its use for such purposes involves elements of additional risk to the official force and nurses, to which we have no right to subject them.

Under the law it became necessary for the superintendent of the institution and the board of control to establish the cost of maintenance in advance and this was determined to be \$10.00 a week, that amount representing the experience of other institutions of the sort. During the entire period of the maintenance of the institution up to the present time the per capita cost per week has largely exceeded that estimated amount. This is the universal experience in opening new institutions while the number of inmates remain small, and it is very evident from the experience of the past six months that the weekly cost per capita per week will exceed the limit of \$10.00 until the population approximates one hundred fifty patients.

It is evident from the number of patients now at the institution and from the applications which have been received that the capacity of the institution should at once be increased to one hundred and fifty or one hundred sixty beds, besides those of an infirmary. With that number of patients in the institution the cost of maintenance can be brought well within the cost established by the board.

General Report.

The law establishing this institution provides a method by which patients unable to pay for their own care can be certified by the county judge so that their care in the institution will be paid for by their county at the rate of \$5.00 per week, intended to be practically one-half of the cost. There is a large class of cases, however, who are able to pay a part of their own way and wish to do so and not become county patients. While the institution was filling up, this board accepted the responsibility of receiving some patients of this class at the same rate as that paid by the county for indigent patients, where it was clearly shown that they could pay that rate and become patients, but could not pay more. In several of these cases they paid their way as long as their money held out and were then compelled to leave the institution too soon for their own good.

It seems to us that these cases are worthy of consideration and that the law should be so amended as to allow this board, in case it shall find, upon investigation, that the patient is unable, to pay the smaller but not the larger charge, to provide for his being received into the institution on the same basis as the county patients.

The law providing for the establishment of this institution also contains several radical differences from the laws governing other state institutions.

1st. It provides for an advisory board to be appointed by the Governor, which is authorized to select the site, to approve of plans for buildings, to appoint and remove the superintendent of the institution and to determine the amount of medical assistance necessary and to approve or disapprove of the appointment of medical assistants.

2nd. The superintendent is given full power to govern the institution in accordance with rules and regulations for the government of employes made by himself and approved by the advisory board. He is given full power to appoint all employes not subject to the approval of or removal by any board.

In each of the other institutions under its management this board has power to appoint and remove the superintendent and principal officers. The superintendent has power to appoint all subordinate officers, subject to the approval of this board, and

General Report.

power is given both to the superintendent and to the board to remove any officer or employee for cause.

It is the experience of this board that these powers are all essential to the proper control by them of the management of the institutions.

The powers granted to this board by the law creating the tuberculosis sanatorium are, therefore, too limited to enable it to secure such efficiency of management as it deems necessary to the usefulness and success of the institution. We believe that this board should be given, in relation to this institution, practically the same powers as it has in relation to the others and that the powers of the advisory board should be limited to visitory and advisory powers in matters relating to the medical policy and management.

As suggested before, there is immediate need for four additional shacks to provide accommodations for eighty more patients. Also some slight betterments to the two shacks first built. These were built in a crude and simple way and have not proven satisfactory.

It was necessary in building the refectory to omit one short wing in order to bring the original contract within the first appropriation. This provided for rooms for help and it has now become necessary to the institution to add this wing for the accommodation of the help at present employed.

With the increased population of the institution it becomes necessary to establish a bakery, no room for which was provided in the original plan. An addition to the refectory can be made for this purpose.

One-half of the present dining room has up to the present time been used for amusement purposes. With the completion of new shacks the entire refectory building will be used to its full capacity and it will be necessary to provide a meeting and amusement hall. The life of patients in this institution is of necessity very tedious and dreary, and if good results are to be secured, amusements must be provided.

A residence for the superintendent and his family is one of the pressing necessities of the institution.

The coal shed at the power plant is too small to provide stor-

General Report.

age for a proper amount of coal and no sufficient quantity to provide for contingencies can be stored.

The institution is situated two miles from the village of Wales and it is necessary to provide for some of the male employes small cottages, in order that a good and steady class of employes can be obtained, and to accommodate officers with families like the chief engineer, who must be kept constantly within call.

The grounds upon which the institution is placed are very irregular and uneven, necessitating a very considerable amount of grading and it is further necessary to gradually improve the road leading to the institution from the north, since many of the patients, and much of the service of the institution, come from that direction. A moderate appropriation is asked to further this work.

It is, therefore, asked that the legislature appropriate the following amounts in order to meet the pressing needs of this institution:

Additional shacks for patients.....	\$24,000 00
Infirmary	15,000 00
Enlargement of refectory.....	4,000 00
Enlargement of coal shed.....	1,500 00
Chicken house	600 00
Grading and planting.....	3,000 00
Storm sash on buildings.....	1,000 00
Amusement hall	9,000 00
Bakery	1,500 00
Cottage for superintendent.....	4,000 00
Cottages for employes.....	4,000 00
Total	<hr/> \$67,600 00

In establishing an institution having a capacity of one hundred sixty patients and a probable capacity of caring for from three to four hundred each year, the state will have made a beginning in the fight to exterminate pulmonary tuberculosis.

A large proportion of the patients who apply at such an institution are between the ages of twenty and thirty-five years

General Report.

and are persons of very moderate means. In assisting them in a return to health, the state returns them to the class of producers, and prevents them and their families from becoming public charges. In a small way, also, it tends to prevent the spread of the disease.

Scattered through the rural districts and through every village and city of the state, however, are advanced cases of tuberculosis. Wherever they are to be found they are sure to be very active sources of infection, and especially where in cities and villages each case is sure to carry the infection to large numbers each year. It will be impossible to greatly diminish the spread of the disease unless active and intelligent efforts are made to segregate these cases. It is believed that the state should take the initiative in this work.

The grounds obtained for the sanatorium at Wales include upwards of two hundred acres of rugged, hilly land and contains two or three sites suitable for small camps or settlements somewhat widely separated. It is believed that at least one of these sites, situated a little more than a quarter of a mile from the present sanatorium buildings, would be well suited for a camp, providing for such advanced cases. The grounds suited for the purpose could easily provide accommodations for one hundred patients. Such an institution, placed upon the same grounds as the present sanatorium, controlled by the same management, supplied with water and light from the same power plant, could be carried on economically and well. Careful consideration of the subject leads us to the belief that under these conditions these advanced cases could be cared for at a per capita cost of \$5.00 per week.

To establish such a settlement or camp it would be necessary that the state appropriate the sum of sixty thousand dollars; thirty thousand dollars for the necessary buildings to accommodate one hundred people, and thirty thousand for their maintenance during the year and a half left of the appropriation period after the completion of the buildings. The subject is recommended for your earnest consideration.

General Report.

SEMI-STATE INSTITUTIONS.

The care of the chronic insane in county asylums, under state supervision, has proved, on the plan adopted in Wisconsin, in most ways decidedly successful. In most respects the asylums are satisfactorily managed and the quarters, food and care are excellent. Much greater freedom is allowed to the inmates, it is believed, than in any similar institutions. Whereas, the proportion of parole patients, or those having the freedom of the buildings and grounds, ordinarily varies from ten to twenty per cent in hospitals for the insane in states having entire state care of the insane, the proportion of the insane in Wisconsin having the liberty of buildings and grounds, is nearer sixty-five per cent of the entire insane population in institutions.

The system has, of late, received some attention from alienists and students from other states. Hon. Hastings H. Hart, LL. D., of Chicago, a leading authority on and student of the care of the insane, who has been familiar with this system for many years, who had previously studied these institutions and again visited them last year, has recommended that a similar system be adopted for Oklahoma for which state he is acting as an expert.

Mr. Hart in a special report on the subject says, "The writer has been familiar with the Wisconsin county system almost from its inception, having lived in the adjoining states of Minnesota and Illinois. For many years he entertained serious doubts as to the permanent success of the Wisconsin plan, but, having watched its development for twenty-five years, visiting the Wisconsin county asylums from time to time and comparing the care of patients there with the care of similar patients in state institutions, he can testify from his own knowledge that the Wisconsin county asylums are furnishing better care than the average state institution for the same class of patients."

The state of Pennsylvania in 1901 sent a committee to study the Wisconsin system, and as a result adopted it in part. They, however, failed to make the separation of the chronics from acute cases, a part of this system. During the fall of 1908 Doctor Woodbury, the secretary of the lunacy committee of the

General Report.

state board of commissioners of charities of Pennsylvania, accompanied by Doctor Orth, superintendent of the Harrisburg hospital for the insane, acting as a committee, made a second visit to Wisconsin to study again the Wisconsin system of county care of chronic insane. They visited seven county asylums and two state hospitals for the insane and the home for the feeble minded and made a thorough study of the institutions, their methods and management. In his report of his investigation to the committee on lunacy Doctor Woodbury discusses his observations quite fully. We quote from his report, "It may therefore be regarded as a fact, after twenty-five years experience with this method in the state of Wisconsin, that "County Care" is based upon sound business principles, and that from the standpoint of administration, it satisfactorily solves the economic problem of caring for the indigent insane. It is worthy of notice, from an historical point of view, that the "County Care" system was inaugurated and carried on successfully under the former state board of public charities, the present state board of control having come into existence about fifteen years ago."

"More important, however, than the financial aspect of the subject, is that point of view which regards the welfare of the patient, and especially the bearing which it may have upon his restoration to reason, and replacing him in his home, as a useful, self-supporting member of society. Three questions particularly require consideration:

1. Is the patient as well cared for in the county asylums as he would have been if kept in the state asylums?
2. Has he greater or less chance of recovery under the present than under the former system?
3. Is the increased amount of work (chiefly agricultural in character) a benefit or an injury to him?

"Summarizing the impression made by these several institutions, it must be stated that on the whole they are highly favorable. Wisconsin apparently has made adequate provision for the treatment of the indigent insane, not merely with a view to satisfying present demands, but with proper provision for the future needs of this doubly unfortunate class, with a wise generosity which calls for words of highest commendation. It is

General Report.

questionable if the indigent insane are better fed, better housed and better cared for generally, than they are to-day by Wisconsin; there are few communities in which, taking the insane population as a whole, they are treated as well."

"The question whether the patient is as well cared for in the county asylum as in the state asylum, is considerably modified by this fact; that he must be a chronic case before being placed in the county asylum. Observation shows that this class of patients is better off in the smaller institutions, where they do not lose their individuality as they would in a larger one, indeed, the patient in the county asylum usually soon becomes personally acquainted with the superintendent and friendly relations are frequently established which are favorable to recovery."

"Replying to the second question, it may be said that the chances of recovery of the chronic patient are at least as good and presumably better under the "County Care" system."

"As regards the third question, our personal observation of the good physical condition of the patients and the reported small amount of sickness in these institutions, argues strongly in favor of the hygienic value of out-door employment, such as is provided by the dairy and other farm work. In fact, a small proportion of these patients recover sufficiently to permit them to work on other farms in the neighborhood and in the course of time, they may be ultimately paroled, and returned to their friends"

During the past year the county of Douglas has completed its new county asylum, a departure in some ways from those previously planned and in every way a fine and complete asylum. It will be occupied early in 1909 and will accommodate one hundred twenty patients.

Improvements were made the past two years increasing the capacity of the Trempealeau, Marinette, Fond du Lac, Dodge, and Dane county asylums and other additions are promised in Jefferson and Vernon counties during the coming year.

These institutions are now somewhat more filled up than they should be and it will be necessary to have two additional asylums built during the next biennial period.

General Report.

WORKSHOP FOR THE BLIND.

The workshop for the blind continues, under the faithful superintendence of Mr. Oscar Kustermann, to fulfil in an efficient manner the objects for which it was established. It has been necessary that this institution should occupy rented quarters in the city of Milwaukee in a neighborhood where the inmates of the shop can find living quarters at reasonable rates and where the rent of the institution quarters would not be too great.

The excellent work which has been done in providing employment for the blind seems to this board to entitle that institution to special consideration and that it should no longer be compelled to occupy such insufficient and badly arranged quarters but that it should have a home of its own. Such a workshop as it should have, together with the necessary simple warehouses for the storage of the raw material and the finished products of the shop, could be built for a very moderate sum. It is, therefore, earnestly recommended that the legislature provide at an early date for the establishment of the institution in a conveniently planned home of its own.

Orders Issued by the Board.

ORDERS ISSUED BY THE BOARD.

ORDER NO. 1.

OFFICE STATE BOARD OF CONTROL

MADISON, WIS., April 26, 1898.

"For the purpose of establishing and more clearly defining the functions of the Superintendent and Wardens of the several State Charitable, Penal and Reformatory Institutions governed by the Board of Control, and the officers and employes therein, their relations to each other and to the Board of Control, and the tenure of their respective offices, the following order is promulgated for the information and guidance of all concerned:

First—Superintendents, wardens, stewards and general matrons shall be appointed directly by the Board of Control.

Second—The following officers shall be appointed by the Board upon the nomination of the proper superintendent or warden: Chaplains, physicians, and assistant physicians, principals and teachers of schools, assistant wardens and stewards, head engineers, and agents at the State Public School and the Industrial School for Boys.

The superintendent or warden may suspend any of the officers mentioned in this paragraph, and may remove any of them except the assistant warden, principal of schools, chaplain and the agents above mentioned, promptly reporting to the Board such removal, or suspensions, and the causes therefor.

Third—Each superintendent or warden shall appoint, and in his discretion may remove, all other subordinate officers and all employes, not officers of his institution. The superintendent or warden shall monthly report to the Board, with his estimate for the ensuing month, all changes of subordinate officers during the past month, and the dates of such changes.

Fourth—The regular term of office of each officer or person mentioned in paragraphs No. 1 and 2 shall be one year from July 1st next after appointment. The nominations required in paragraph No. 2 shall be submitted to the Board May 20th in each year. Appointments to fill vacancies terminate on July first, next after they were made, and nominations therefor shall be submitted to the Board as soon as practicable after the vacancy occurs.

Fifth—Superintendents and wardens are charged with the duty of giving all subordinates in their respective institutions affected by this order timely notice of its contents."

Orders Issued by the Board.

ORDER NO. 2.

OFFICE STATE BOARD OF CONTROL,
MADISON, WIS., January 3, 1900.

"A careful examination of the law fixing liability for the expense of the care and maintenance of the insane in the State Hospitals and County Asylums seems to lead to the following conclusions:

I.

The only statute giving the State a right of action against individuals for such expense is Section 604g., R. S. It applies alike to all persons committed as insane whether inmates of a State Hospital or a County Asylum, but it only reaches the case of an inmate who has an estate sufficient to pay for his or her maintenance, the cost of which must not exceed \$3.00 per week. The judge has the power in his discretion to refuse to charge the estate for the cost of maintenance of the owner, even though sufficient for that purpose, if such owner has a parent, wife or child dependent upon such estate for future support.

If a proceeding is instituted under the above Section, whether by State or County authority, it should be prosecuted before the judge in behalf both of the State and County, and his order for the payment should probably be in the name of the State and County, although perhaps action in behalf of each might be allowed.

II.

Pursuant to Section 600, R. S., the sums charged any county for maintaining a patient in the State Hospitals, chargeable to it, may be collected by such county, by suit, out of the property of the patient, or from any person legally bound to support such patient. The State has no interest in, or concern with, any such proceeding. It is merely designed to reimburse the county for its expenditures for maintaining such patient in the State Hospitals.

III.

If an insane person resident of and chargeable to any given county is maintained in the asylum of some other county, it seems quite certain that the county so chargeable may recover, in like manner, the sums legally paid by it for such maintenance, out of the estate of such insane person, or from any person legally liable for his or her support.

If the patient is maintained in the asylum of the county chargeable for his maintenance the recovery should be limited to \$3.00 per week for such maintenance, and in addition thereto, the cost of clothing, necessarily furnished such insane person by the county.

Orders Issued by the Board.

IV.

If the county collects a sum equal to \$1.50 per week for the maintenance of such insane patient no part of the expense of his maintenance can properly be charged to the State. If less than \$1.50 per week be so collected the State is chargeable only for the difference between the sum collected and \$1.50 per week.

V.

Under the provisions of Section 604*d*, and 604*e*, R. S., the State is not chargeable with the \$1.50 per week specified in Section 604*d*, for the care of an insane inmate of any county asylum who is a resident of the county maintaining such asylum, "whose support is not properly a public charge."

The support of any such inmate is not properly a public charge: (1) If some responsible person within the reach of the process of our courts is liable therefor, as in the case of a wife or minor child of a responsible husband or father; or (2) if such inmate has a father, mother or child in like manner amenable to the process of our court a sufficient ability under Section 1504, R. S., to maintain and care for such inmate or (3) if such inmate has an estate sufficient under Section 604*g*, R. S., to defray the cost of his or her maintenance and care.

This paragraph applies only to the maintenance of insane inmates of a county asylum who are residents of, and chargeable to the county maintaining such asylum.

VI.

For the purpose of protecting the State from being charged for the support of insane persons for whose maintenance it is not legally chargeable, county asylum trustees are required to certify in their reports upon which State allowances, under 604*d*, R. S., are claimed that after diligent inquiry they believe no such claim is made therein on account of any insane persons, whose support is not properly a public charge under the laws.

Each board of trustees will also report to this Board the name of each inmate in their asylum, and in the State Hospital, chargeable to their county, for whose maintenance in whole or in part their county has been reimbursed during the time covered by their report, and the amount thus recovered on account of each such inmate.

VII.

In determining whether some responsible person is liable, or may by legal proceedings be made liable, for the support of an inmate of any county asylum who is a resident of the county maintaining such asylum, or whether such inmate has a sufficient estate to pay for his or her own maintenance, this Board does not insist upon or desire the application of any rigid rules in favor of the State. In making such determination the officials of the asylum should consider the nature of the property of the person sought to be charged, its productiveness and the probable income which may be derived from it, the size and reasonable cost of maintaining the family of the owner and all other con-

Orders Issued by the Board.

ditions which may reasonably be supposed to effect the liability of the owner to support such inmate. The mere fact that the cost of such support can be collected by legal proceedings against some person does not, of itself, necessarily prove that such person ought to be charged with the maintenance of such inmate and the State thereby relieved of such charge. All that the Board requires is that the asylum officials exercise a discriminating and just discretion in making their classifications of the inmates of their asylums who are residents of their county. Such is believed to be the true intent and spirit of the statute in that behalf.

VIII.

Under section 604f, for all inmates of a county asylum whose support is not chargeable to the county maintaining such asylum, the State pays such county \$3.00 per week each and the amount necessarily expended for clothing them. The liability to pay this sum, and the liability of counties to refund to the state a portion of it, does not depend upon the question (as in the former paragraphs) whether or not the expense of the support of such patient is properly a public charge. The obligation of the State is absolute to pay the stipulated sum for each patient of that class, and it is equally absolute that the county chargeable with the maintenance of any such inmate shall refund to the State \$1.50 per week, and the amount necessarily expended for clothing him or her.

STATE BOARD OF CONTROL,
By W. P. LYON, President."

ORDER NO. 3.

COUNTY ASYLUMS FOR THE CHRONIC INSANE—DIRECTIONS CONCERNING
THEIR MANAGEMENT IN CERTAIN PARTICULARS.

OFFICE STATE BOARD OF CONTROL,
MADISON, WIS., April 5, 1900.

Although the County Asylums for the Insane are erected, organized and managed by county authority, are primarily maintained by the respective counties, and, properly speaking, are county institutions, yet because the State contributes largely toward the support of all the inmates therein and has the necessary authority to prescribe proper care and treatment of such inmates (each of whom is a ward of the State) such asylums are also in a large sense state, or quasi-state institutions.

The State exercises its functions in respect to these asylums chiefly through the agency of this Board. In the discharge of its duty in that behalf this Board has from time to time requested county asylum officials to adopt certain policies and methods of procedure in their respective asylums for the purpose of improving the condition and promoting the welfare of the inmates thereof. Such requests have the force of orders made by authority of the State, and must be so regarded. This Board has also decided to give some additional directions concerning the management of such asylums. These, with the directions heretofore given, are briefly as follows:

Orders Issued by the Board.

I.

Asylum physicians should not be selected and contracts for the medical care of the insane awarded upon competitive bids. The Trustees should appoint some competent physician and fix his salary. The selection should be made with the care and consideration that might reasonably be expected in the selection of a family physician.

The asylum physician should visit the asylum at least twice in each week. At each visit he is expected in addition to attending to the sick inmates to examine the sanitary condition of the asylum and grounds and the condition of the patients, their health, diet, clothing and cleanliness, the work required of them and any other condition affecting their welfare and comfort. He will advise and direct the Superintendent as to which of the patients should be required to labor and the kinds and amount of work each working patient is able to perform. At each visit to the asylum the physician shall enter in a book, furnished by the Superintendent, the date of his visit, the name, age and malady of each patient treated by him, the treatment prescribed and the name of each patient he has advised the Superintendent should not be required to labor. At least once in each month the physician should also enter in said book, statements of the sanitary condition of the institution, and the general condition of the patients in respect to matters herein mentioned. He is invited to enter therein any suggestions he may think proper to make for the improvement of the institution and the promotion of the welfare of the inmates. Such report book should be properly ruled and the required entries affecting individual patients should be made under the following heads:

Date of visit.	Name of patient.	Age.	Malady.	Treatment.	Remarks.
----------------	------------------	------	---------	------------	----------

Patients excused from labor may be named in second column or under the head of "Remarks." A separate portion of the book may be set apart for the monthly report above mentioned.

II.

Each County Asylum shall have upon its staff of employes a female night attendant who shall be constantly on duty during each night in the apartments occupied by the female inmates. Such attendant shall make a daily report to the Superintendent, to be written in a book provided by him for that purpose, stating the name of each patient who was sick or disturbed during the night, the nature of her sickness or cause of her disturbance and what was done for her relief; and stating also any unusual occurrence in the female apartments during the night. The Superintendent should see that this rule is faithfully complied with. The reports of the physician and female night attendant shall be kept by the Superintendent for the inspection of all persons entitled to see them,

Orders Issued by the Board.

III.

The Trustees of each County Asylum are required to employ and keep on duty a competent night watchman at their institution through each night during the whole year.

When it is considered that each of these institutions is inhabited by from one hundred to one hundred and fifty, and more, irresponsible persons, many of them prone to mischief, and nearly all incapable of self preservation in case of fire or other peril, it seems absolutely necessary to their proper protection that some intelligent man in full possession of his faculties be with them and upon the grounds of the institution constantly.

IV.

Regulations for ascertaining the amounts chargeable for clothing furnished by the Trustees of any County Asylum to the inmates thereof, a portion of whose maintenance is charged to counties other than that in which such asylum is situated, or wholly to the State, pursuant to Section 604f, R. S.

1. An accurate account shall be kept of the clothing furnished each such inmate and the same shall be charged to the proper county, at the actual cost thereof. The asylum authorities are expected to use reasonable diligence to make purchases of such clothing in the cheapest available market.

2. Clothing accounts made pursuant to Section 604f, R. S., must be verified by the affidavit of the proper Superintendent (or in case of his inability, by a Trustee) substantially in the following form:

"State of Wisconsin, }
 County } ss.

....., being first duly sworn, deposes and says that he is the Superintendent (or a Trustee) of the..... County Asylum for the Chronic Insane and has the keeping and custody of its accounts for clothing furnished the inmates therein, that the above and foregoing statement of clothing account charged to other counties, or to the State is accurate and just, that the value of such clothing so chargeable necessarily furnished each inmate of said asylum during the fiscal year ending September 30th,....., and the sums necessarily expended therefor are correctly stated therein and that no part of such sums has been paid or previously audited.

Subscribed and sworn to before me
 this.....day of.....

.....
 Notary Public."

3. The Board of Supervisors of any county charged with a portion of the expense of maintaining any person or persons in the Insane Asylum of some other county may at any time request the Trustees of such asylum to furnish it with an itemized account of the articles and cost of clothing furnished such person, and such Trustee when so requested will be expected to promptly furnish the same. The Board of Control will adjust any controversy as to the accuracy of such account.

Orders Issued by the Board.

v.

If the County Asylum and the County Poor House are under the same management, the salaries and wages of all officers and employes whose duties are common to both institutions should be apportioned to such institutions on the basis of the average population of each. The monthly report of wages and salaries should be made, and the per capita cost of maintenance in the annual report should be computed on this basis.

There shall also be kept an account of all the products of the asylum farm used or consumed in the asylum, or disposed of and the proceeds so used. The fair market value thereof, or the money received from the same and so used in each year, shall be deducted from the annual interest at 4 per cent. of the cost of the asylum plant and equipment, excluding cost of poor-house and equipment, if there be a poor-house under the same management. The balance represents the net annual interest on the investment at 4 per cent. This balance should be included in the current expense account of the asylum upon which the per capita cost of maintenance is computed.

vi.

Section 601, R. S., provides that every female over ten years of age committed to any hospital or asylum for the insane shall be accompanied by a competent female. This Board has been astonished to learn that this most salutary law, demanded by common decency for the protection of helpless insane women from possible outrage or neglect, has recently been disregarded in two instances, in each of which an insane woman was brought to the hospital, in one case by a sheriff alone and in the other by the sheriff and a male assistant only.

Failure to obey this law cannot be tolerated. Hence, Superintendents of hospitals and asylums are directed to report any such failure to this Board with the name of the delinquent officer, to the end, that a representation of the facts may be made by this Board to the authority having power to remove such officer.

The above directions were adopted and ordered printed and distributed April 14th, 1900.

STATE BOARD OF CONTROL,
By W. P. LYON, President.

Statement of Current Expenses.

STATEMENT OF CURRENT EXPENSES

At the several state institutions for the fiscal years ending June 30, 1907 and 1903, after taking into account the supplies on hand at the beginning and close of each year, and receipts and transfers from the different departments.

SUPERINTENDENT'S REPORT.

MENDOTA, WISCONSIN. July 1, 1908.

The Honorable, State Board of Control,

GENTLEMEN:—In compliance with the law, and the request of your Honorable Body, I take pleasure in submitting to you this, the thirteenth biennial report of the Wisconsin State Hospital for the Insane, for the period ending June 30th, 1908.

The daily average patient population of this institution for the fiscal year ending June 30th, 1904, was 425; for the year ending June 30th, 1905, 431; for the ending June 30th, 1906, 459; for the year ending June 30th, 1907, 568; and for the year ending June 30th, 1908, 612. There are now beds for 650 patients, and in a few weeks when the new plumbing is completed and some changes are made, there will be room for ten more, making a total of 660 beds; thus making it possible to have a daily average of 630 patients. The improvements made in the past four years have increased the capacity of this institution two hundred patients, giving the lowest cost per bed in the history of the hospital. The cubic space and the ventilation of all the rooms have been considered and all beds located accordingly. The general health for the biennial period has been very good; no epidemic and nothing uncommon in the causes of death have occurred. The mortality has been low and about the same as in the past thirty years.

The installation of large general bath rooms in the new building for each sex is of inestimable value in the care and treatment of the patients. The patients are bathed twice a week by means of the shower system, which prevents the use of the same water for more than one patient. These baths are followed by a soap, salt, or plain rub under the direction of the physicians in charge. The general bath rooms and the ward bathrooms with their new plumbing and their new equipment furnish complete and up-to-date bathing facilities.

State Hospital.

The congregate dining room with a seating capacity of five hundred, has proven a great success for the reason that both food and service are easily observed. The constant attention given to the kitchen and to the preparation and serving of food has been conducive to the health, comfort and happiness of the patients.

The infirmaries have been removed from the third floor of the new building to the first floors on either side of the main building, thus the sick are under better conditions; they are more easily visited by the physicians; and are more closely observed by the supervisors at meal time and during any special treatment. Most of them spend nearly the entire day surrounded by flowers and vines on the recently built porches, which form part of their wards, and others who are strong enough further enjoy themselves on the lawn. In case of fire these patients are insured much better protection than they were under former conditions. The location, surroundings, and comfort of the infirmary patients have been markedly improved.

In May, 1907, I attended a meeting of the National Medico-Psychological Society at Washington, D. C., and with the interest of this institution in mind, I visited several of the largest hospitals in the East, among others the National Hospital at Washington, D. C., the Manhattan Hospital at New York, the Battle Creek Sanatorium, Michigan, and the Hospital at Dunning, Ill., for the purpose of investigating the most improved methods in the uses of hydrotherapy, particularly the continuous hot water bath in the treatment of patients during periods of excitement. Upon my return home, I recommended to your Honorable Body the installation of this method of treatment, which met with your favor and is now nearly completed, and very soon we shall have in use three tubs on the male side and four tubs on the female side. For the past year this method of treatment has been followed as well as possible by the use of the ordinary tub and the results have been very satisfactory. It is not expected that the continuous hot water bath will insure a cure for all disturbed patient, but we do anticipate more recoveries under this method than that of the old method of treatment by drugs. The irritation of the nervous system

Superintendent's Report.

produced by autointoxication is reduced by the elimination of poisons from the body and the patient is quieted and refreshed by sleep.

In the care of patients, employment in and out of doors is rigidly adhered to. Fresh air, sunlight, and exercise have more influence on metabolisms within the body than all other forces in nature. All patients unable to perform light manual labor, but who are physically able, are taken to walk for exercise two or three times daily. Upon arriving at the hospital, all new patients are examined, bathed and put to bed for a shorter or longer period according to the case, for the purpose of observation, and securing a clinical record, and to cause the patient to realize that he is in a hospital for treatment.

A pathological laboratory has been recently installed so that in the future the blood and secretions of a patient can be examined and a better knowledge of the case gained.

The surgery has been remodeled and equipped with most approved and up-to-date apparatus.

Amusements have been about the same as in former years and the usual religious services have been observed.

The stenographer has charge of the library, magazines, periodicals, and newspapers and distributes them regularly to the different departments. There are about One thousand volumes in the library and the following magazines and papers are taken by the State:

Harper's Weekly
 Outlook
 Judge
 Century
 Munsey
 Youth's Companion

By the permission already granted by your Honorable Body, I am going to place an industrial teacher on the ladies' side of the institution.

On the first of last May, Dr. Eugene Chaney, who has been connected with the Hospital for the past ten years and who for several years had been First Assistant Physician, resigned to become First Assistant Physician with Dr. Dewey at Wauwatosa, Wisconsin, at a very much increased salary. Dr. M. K. Green, who has been in the hospital about six years, was promoted to First Assistant Physician; Dr. August Sauthoff, who has been in the Hospital two years, was promoted to Second Assistant Physician; Dr. Willard W. Decker of Chicago, was elected Third Assistant Physician; and Dr. Mary Blake-lidge of LaGrange, Illinois, was elected Pathologist and Woman Physician.

On the first of last April, the salaries of all Charge Attendants were raised and they were classified as officers, the idea being to elevate them above the average attendant and to con-

Superintendent's Report.

stitute them part of the management, hoping thereby to make them more interested and more willing to report improper actions of their assistants. The change has resulted favorably and the service has been improved.

During the last biennial period there has been no cessation in making repairs and constructing substantial improvements. When it is considered that the main buildings are fifty years old and that for many years no special repairs or improvements were made, it is evident that a large amount of labor and material has been and will be necessary.

Since my last report the following substantial improvements have been made:—a power cold storage; an up-to-date bakery with a Peterson oven, a dough mixer, flour room, bread room, work room, work tables and bread cupboards. A water heater and softener which will improve the water for bathing and laundry purposes and decrease the soap bill materially, has been placed in the power house.

The new plumbing in the old building for the sixteen ward bath rooms is about completed and the new plumbing for the two continuous bath rooms for the purpose of treatment, will soon be ready for use.

On account of the injury to walls and plaster during the installation of the electric lighting system and the general decay and delapidation of the hospital buildings, it has been necessary to paint both inside and out, which has cost \$5,500.00 for paint and painters. The entire hospital has now been renovated.

New roofing has been placed on two of the main parts of the wings of the old building, also on the rear center, on the cold storage, and on the cow shed.

Two hundred iron beds, and bedding for the same, have been purchased.

Several hundred dollars worth of new furniture has been made in the carpenter shop by the carpenter and patients, and a large amount of furniture from all over the hospital has been repaired and re-upholstered in our shops and made practically good as new. Wardrobes; cupboards for dishes, brooms, mops, wood, etc., have been made and are conducive to order and convenience.

State Hospital.

A small pathological laboratory has been installed with proper plumbing and fixtures.

The surgery has been remodeled and furnished with a modern table, sterilizers, and plumbing, which equips it for any kind of surgical work.

A new method of making and filing reports of cases has been installed, which includes all the records of a patient in one folder and relieves the physicians of much writing as the work is done by the stenographer.

Two large porches have been built of steel and cement in front of the infirmaries.

A cement walk five feet wide and three fourths of a mile in length, has been built from the hospital to the railroad station, and the country road has been parked, graded and protected by stone gutters.

A cement walk has replaced the board walk in the rear of the female wing, and a stone gutter has been built from the garden house along the private drive to the island.

A new railroad scale for the purpose of weighing coal cars has been placed.

The florist has done much to further beautify the grounds by planting hundreds of trees and shrubs and making large rustic and cement vases, which are filled with plants and used in decorating the lawn. Twenty-five new benches have been added to those on the lawn for the convenience of the patients.

A cement root cellar, 22x60 ft., has been constructed.

We have proven it to be profitable to grow potatoes in large quantities, and so have purchased a potato planter and a potato spraying machine.

Last spring fifty apple trees were added to the new orchard which was planted three years ago, making now seven hundred and fifty trees.

Last year we received fifty-six more patients from our old district than in 1907, and we received seventy-four patients from the counties of Kenosha, Racine, Waukesha and Jefferson, recently added to the district, making one hundred and thirty more patients admitted to the State Hospital during 1908 than in 1907, or a total of four hundred and sixty new admissions

Superintendent's Report.

for the past year. This condition in the old district shows that the population in the state is increasing rapidly and that the state will be obliged in the near future to provide more room for the acute insane. The capacity of this hospital is only six hundred and thirty daily average.

The private sanitarium is the rich man's insane hospital, and the patients taken there for a few weeks or months during the early stages of a mental or nervous break down, are restored to family, friends and society, without the legal mark of insanity placed upon them by the court, the value of which can never be estimated. Many patients treated in a private sanitarium, although as much insane as those committed by law to the State Hospital, are shunned by no one and suffer no stigma. I recommend that your Honorable Body request the next legislature to strike the word "insane" from every institution in Wisconsin, and that in the future they be recognized as state and county sanitariums for the treatment and care of mental disorders. Let there be no reminder to the patient of his mental trouble and allow him the same right to be treated for nervous diseases as for any other disease.

Statistics show that a much larger per cent of mental troubles recover if treatment is obtained in the early stage of development. Statistics also show that it costs the state on an average, two thousand dollars to care for a patient who becomes a dependant. If these statements be true, should not the state be anxious both from a humanitarian and a financial standpoint to provide for its less fortunate citizens the same opportunity for treatment and recovery in the early stages of mental disease, that the private sanitarium offers to the rich? I see no reason why Wisconsin should not establish in connection with its hospitals for the treatment of acute mental disorders, Psychopathic cottages, or wards, where any citizen of the state may come of his own free will and request observation and treatment for mental, or feared mental trouble, and if, after consultation with the medical staff of the institution, it be decided that he requires treatment, admission may be gained by the payment to the state the actual cost of treatment, or if unable to pay, the cost should be charged to his county. No such citizen should be legally

State Hospital.

committed as insane unless by authority of the physicians in charge. It is not intended that the patient who comes voluntarily be given treatment any different from that employed in the case of every patient regularly committed, but the idea is to make popular the seeking of early treatment without commitment.

The management of the insane has resolved itself into two great problems:—the treatment of the acute in the best hospitals possible, employing the best methods known, and without the legal mark of commitment, and the re-education of the chronic insane for the purpose of making them useful in the community and for the further purpose of increasing their own comfort and happiness in the use of their remaining mental faculties.

It is very unfortunate, but a fact nevertheless, that the popular mind is thoroughly pervaded with the idea that a hospital for the insane is not a place to help or cure mentally afflicted persons, nor that those so afflicted should be taken to institutions for treatment at the first appearance of such disorder. All physicians agree that if early treatment be obtained in the first stages of development that the number of cases cured would be increased. With the popular mind in the present state many people are retained and restrained at home until at last the disease has become "incurable" and the unfortunate committed to some hospital for years, or for life, for the security of society and to protect him, it may be, from self destruction. I would recommend as a matter of educating the people in the different localities of the Hospital district, that your Honorable Body request the Legislature to pass a law requiring the county judge, district attorney and the chairman of the county board of supervisors to visit the State Hospital annually and make a report to the County Board of Supervisors. No other agency could do more towards teaching the people that State institutions are not prisons but hospitals, indeed, for care and cure of the inmates. The members of these boards are of easy access to the people and many hundreds learn through these members the actual conditions and real merits of the hospital.

Superintendent's Report.

I desire to call your attention to the deplorable condition of the power house, which is fifty years old and worn out. The laundry is directly over the four large boilers, making it dangerous to forty people who work there. The machinery in the laundry is worn out and the coal shed is practically useless, as it is ready to fall to pieces. Our engineer states that thirty per cent of the fuel is wasted on account of the distance of the boiler room from the main buildings. Repairs have been constantly demanded and extensive repairs are needed now, which have been estimated to cost \$15,000.00. A new power house could be built for \$30,000.00 so there is no economy on the part of the state to continue repairs when an entirely new plant is so imperative.

I respectfully recommend to your Honorable Body that the grounds around the hospital buildings be carefully surveyed and a general plan be made for new buildings, which shall include two cottages—one on the male and one on the female side—a home for nurses, a new power house, a laundry, and workshops. The two cottages will increase the capacity of this hospital to about eight hundred and fifty beds and give opportunity for better classification of patients and make it possible to have the Psychopathic wards. I would not recommend that your Honorable Body ask the next Legislature for an appropriation to cover the cost of all these extensive improvements at once, but that you present a general plan to that body, which, if completed in a few years, will place the Wisconsin State Hospital on a par with the best in the country.

The smokestack has not been repaired or rebuilt, neither has the receiving house or the morgue been built, for the reasons that the appropriation of two years ago would not cover the cost, and because if the power house be removed, a lower driveway must be constructed and a receiving house and morgue be built in a different location from where they would be under the present conditions.

I respectfully ask your careful consideration of the appended statistical tables which show the financial and other conditions of the hospital, and I trust that you will be satisfied that the management has been as economical as possible compatible with

State Hospital.

good care and proper treatment of the inmates and employees.

The cost of living could be reduced by the addition of more land and the patients benefited by the labor afforded. It is a serious mistake that the state does not own the land lying between the hospital grounds and the railroad tracks to the east. With a dancing pavilion, picnic grounds, and campers in such close proximity, and all kinds of careless, curious summer visitors invading the grounds of the institution, the peace and quiet necessary for the welfare of the inmates is seriously menaced and the gardens materially depleted.

I wish to tender my thanks and acknowledge my sincere appreciation to the officers and to all employees who have performed faithful and efficient work during this biennial period.

In conclusion, I beg to express my appreciation to your Honorable Body for your valuable suggestions, your generosity, and your constant and unfailing support while administering the affairs of the institution.

Respectfully submitted,

CHAS. GORST,
Superintendent.

Farm Foreman's Report.

REPORT OF THE FARM FOREMAN.

MENDOTA STATE HOSPITAL,

Dr. Chas. Gorst, Supt.,
Mendota, Wis.

GENTLEMEN:—I have the honor to submit herewith the first report of the farm at this institution.

Since entering upon my duties in April last, the progress made—while not especially striking in any particular direction—has been steady and substantial in all branches of the work. Agriculture is the fundamental support of the American Nation, and soil fertility is the absolute support of agriculture. “If he who makes two blades of grass grow where only one grew before, is a public benefactor, then he who reduces the fertility of the soil so that only one ear of corn grows where two have been grown before, is a public curse.”

The soil has two distinct functions to perform in crop production. First, the soil must furnish a home for the plant where the roots can penetrate the earth upon which the plant must stand. Second, the soil must furnish plant food, or nourishment, for the growth, development and maturing of the plant. To improve the physical condition of the soil is to improve the home of the plant; while to add to the soil, or to liberate from the soil fertilizing materials, is to increase the available supply of plant food.

The land at this institution falls short of these two functions. It is quite necessary to begin at once. First, to prepare a home for the plants by a thorough and scientific method of plowing, and to do this we must have first class plows, of which this institution is devoid. Second, in order to furnish plant food we must plan a system of crop rotation, which on account of the demand upon the farm by the institution for a greater production of potatoes and corn than cereals, which are required in

State Hospital.

rotation, this fertility will have to be kept up by the production of barnyard manure, which calls forth some immediate improvements such as a manure vat; manure carriers to convey the manure from horse and cattle barns to the vat, there to decompose; then to be conveyed to the soil by the means of manure spreaders, two of which we are in need. Then in order to do this plowing and fertilizing satisfactorily, we will have to have horses, of which we are now practically without. There are at present fifteen head of horses:—Four driving; eleven work horses. Of the eleven, two are used by the gardener, one by the lawnman, and one dray horse; five are worthless other than for plug service. These horses should be sold and replaced with extra heavy draft horses of the Percheron breed.

The milch cows, of which we have fifty-seven head, forty of which are giving milk, are an average grade of dairy cattle; producing quantity less quality in milk.

The hogs are of the Poland China breed and are all that one could ask for in the way of breeding and fattening.

The crops consist of oats, corn, hay and potatoes. Oats following a crop of corn, for which the ground the previous year had been heavily manured, was of extra quality and a good yield, producing an average of sixty bushels per acre. Corn, of which thirty-three acres was of poor quality, being planted on ground that had been producing corn until the fertility was gone; this ground will have to be heavily fertilized and properly rotated, which will take some two or three years to bring it to a crop producing condition. Fifty acres of this corn will produce on an average of forty bushels per acre, about two-thirds of what it should produce, partly on account of the season and also the lack of rotation and fertilization. The hay crop was an extra yield, due to the continued rains in the spring, being two hundred, sixty-five tons from fifty acres, this being the second crop on a part of the ground and a third on part of it, this ground should be plowed under and put into corn or potatoes, yet because of the lack of sowing grass seed this spring, and the killing out of what was sown, this land will have to produce another hay crop.

Farm Foreman's Report.

The potato crop will make a yield of about two-thirds of what it should; partly because of the drouth at the time the potatoes were making themselves and partly on account of the lack of the fertility of the soil.

Now in order to place this farm in the condition it should be in, we will, in order to get crop rotation, have to produce less corn and potatoes and more cereals and grass for at least two or three years, then gradually drop back to the production of corn and potatoes.

Thus I recommend the disposal of five of the work horses and the purchase of five Percheron, or any other good draft breed.

The purchase of four follow ground plows.

The purchase of two manure spreaders; the building of a manure vat, and the equipping the cattle and horse barns with manure carriers.

Respectfully submitted,

M. J. FREIDLINE,

Farmer.

SUPERINTENDENT'S REPORT.

WINNEBAGO, WIS., July 1, 1908.

To the Honorable State Board of Control:

The thirteenth biennial report of the Northern Hospital for the Insane—from July 1st, 1906 to July 1st, 1908—is herewith submitted. The usual tables showing “movement of population” etc. are appended.

The two years have been comparatively uneventful.

There has been of course the customary and inevitable anxiety and labor.

Two cases of small pox and several of varioloid developed in May, 1908. I notified the State Board of Health, and Dr. W. F. Whyte, the President of the Board, came promptly and advised as to the management of the outbreak. All of the cases recovered without complication. The occurrence of this dreaded and dreadful disease will be prevented in the future, as we now vaccinate all patients and employees who come into the Hospital.

There have been a number of improvements of a minor character during the two years. These are set forth in the reports of the carpenter, mason and engineer, which are annexed.

The financial standing of the Hospital has been brought low because of unavoidable repairs.

The front hall, which was of wood, was worn out and a tile floor was put in its place. Tile floors were also laid in the bakery and engine room at a total cost of \$1,536.00.

The barns were decayed and about ready to fall down, so that cement foundations were laid under them and cement floors were also put in and the structures were removed to a greater distance from the Hospital at an expense of \$4,120.23.

On account of the decayed condition of the ice storage plant, it became necessary to either rebuild the old plant or put in a

Northern Hospital.

new one, and the decision of the Board of Control to install a modern chemical cold storage plant for the institution necessitated the expenditure of \$7,864.52. The North wing of the Hospital and the barns were reroofed at an expense of \$2,141.14.

Wages have been higher and food has been more expensive. For these reasons the appropriation by the last legislature was not sufficient for the absolute needs of the institution.

The efficiency of the Hospital is lessened by the constant changes in the force of employees.

The office of hospital attendant is not an occupation or a profession. It is a temporary job for a man or woman, who is waiting for something to turn up. Not over one attendant in fifty intends to remain at the work any length of time. The reasons are well known. The work is hard, the hours long, the pay small, and there are practically no chances for promotion. It is work without a future. Twelve to fifteen hours a day of watching, waiting on and associating with insane persons is a very trying business. The trials of women attendants are especially laborious and exasperating. It is a wonder that we are able to obtain women to do this work.

For the State to refuse appropriations big enough to permit the paying of reasonable wages to hospital attendants is a barbarous proceeding.

It requires 160 people to do the work in this hospital. During the biennial period just closed there were 554 persons on the pay roll. These persons as a rule have had no practice in the work they engaged in. They are merely herders. The insane need educated associates who can utter intelligent sentences at the proper moment.

There is no place on earth where "a word fitly spoken" is so needed as among the insane, and no place where such words are so scarce. The ideal hospital attendant should have the patience of Job, the strength of Sandow, the psychological insight of Wm. James, and the compassion of Jesus.

Many of those who have been here in the years that are gone had none of these qualities.

If the occupation were made remunerative, so that people

Superintendent's Report.

would wish to continue in the service, a more desirable class of employes would come to us.

Many of those now here are excellent persons, but in two years they will nearly all be working at something that pays better.

It is quite probable that every year in this hospital eight or ten (may be more) persons become permanently insane through being under the care of ignorant and indifferent herders.

This represents a large money loss to the State, so that there is no real economy in continuing this ancient method because it appears to be cheap. It is certain that the antiquated usages are expensive.

When it comes to the humanity side of the question, a volume should be written to show the suffering in desolated homes, and the long years of waiting for the merciful funeral from the County Asylum.

In all the progressive States of the Union the Hospital attendants have cottages to which they can retire when the day's work is done, where they can enjoy themselves without disturbing the patients. The reasons are many and well known for having the attendants away from the wards, and these have been set forth many times, and so far to unheeding ears.

The epileptics should have a place apart from the ordinary insane.

The reasons for this separation are well known to all who know anything about hospital management, and in the humane States especial provision has been made for these unfortunates.

The care of the insane is one of the most momentous and costly problems with which the State has to deal. It is therefore of importance that legislators should be instructed in the various phases of the subject. An academic knowledge is not sufficient to move legislators to action.

Personal investigation of the institutions is the only effective method of enlightenment.

The failure to give the insane wards of this State as good treatment as other States give the same class is a disgrace to us.

The issues involved are as grave as any matter of taxes, education, railway legislation or other subject that comes before

Northern Hospital.

the law makers, and it is to be hoped that at the coming session of the legislature appropriations large enough will be made to put Wisconsin in the ranks with New York, Illinois, Massachusetts and other humanitarian communities.

During the biennial period there have been 88 patients' dances, 4 patients' and employes' dances, 3 employes' dances 2 mask balls, 51 concerts (home talent), 6 band concerts in the grove, 2 fire work displays (4th of July), 1 picnic for patients, 2 entertainments and Christmas trees, 1 concert by Chas. E. Phipps and wife, 4 concerts by the Arion, Jr. orchestra, 8 lectures and stereoptican views by Rev. Payne, 1 entertainment by Franz Rielhofer and others, 1 concert by Oshkosh lyric orchestra, 1 entertainment by Gavin Spence and niece, 1 lecture and stereoptican views by Rev. Trenery, 1 lecture and stereoptican views by Chas. Turner, 1 recital by Edward Brigham, 1 concert by Normal Mandolin Club, 1 entertainment by Prof. Garretson, 1 entertainment by Archie Leon French, 1 entertainment by Prof. Garns, 1 entertainment by Mrs. Stuart-Richings, 1 entertainment by the Lawrence Glee Club, 1 entertainment by the Carroll College Glee Club, 1 entertainment by W. L. Bush and others, 1 lecture and stereoptican views by Edward Balch Barr, 1 lecture by Prof. J. C. Freeman, 1 Memorial address by L. K. Eaton, 1 entertainment by the American Stock Company (Prince of Liars), and Rev. Abbott and J. M. Hurn gave Fourth of July addresses.

Religious services have been held every Sunday. Rev. J. P. Abbott, Rev. J. W. Bailey, Rev. E. H. Smith, Rev. Geo. Farnum, Rev. John Helmes, Rev. Leon Hammitt, Rev. M. J. Trenery, Rev. Peter F. Stair, Rev. F. A. Pease, Rev. W. A. Ganfield, Rev. R. H. McDonald and Rev. J. H. Schmidt officiated at different times. In addition to this Rev. Schmidt and Rev. McDonald have been here a number of times to see patients who were in extremis.

The following donations have been received and grateful acknowledgment is hereby made of them. Periodicals, illustrated magazines, books and newspapers are always welcomed by the patients and much appreciated.

Superintendent's Report.

Hon. Henry Hagemeister, Green Bay, Wis.....	Seven elk.
Wm. Rogge, Oshkosh, Wis.....	One wild pig.
Walter Geller, Watertown, Wis.....	Two Muscovia ducks.
Geo. H. Budd & Mrs. Powers, Oshkosh, Wis.....	Two barrels of magazines.
K. Klug, Oshkosh, Wis.....	One coyote.
R. P. Finney, Oshkosh, Wis.....	Magazines.
Wm. Horlick, Jr., Racine, Wis.....	Three dozen wild ducks.
Wm. Horlick, Jr., Racine, Wis.....	One bull dog.
Wm. Horlick, Jr., Racine, Wis.....	One eagle.
Wm. Horlick, Jr., Racine, Wis.....	Four barrels of magazines.
John Heinsen, Chicago, Ill.....	Twenty gallons of oysters.

Waupun Times.....	Waupun, Wis.

The old pump house at the lake has been utilized as a treatment house for women.

Every day in the year except the warm days in summer and fall, ten women patients and two or three attendants are sent to the house (which has been designated as the Winnebago Academy of Domestic Science), where they spend the day. They prepare their own meals, read, sew, sing, etc., and after the evening meal return to the Hospital. This is one of the most helpful of all the various devices for directing the minds of patients into healthy channels. The cost of fitting up the "Academy" was \$563.58.

Northern Hospital.

The following changes in the medical staff have occurred during the biennial period:

Dr. A. Nainka resigned in August, 1906.

Dr. R. J. Dysart came Oct. 17, 1906.

Dr. Lucy M. Warner came July 1, 1907.

My sincere thanks are hereby tendered the officers and employes for their courtesy and diligence in the discharge of their onerous duties.

To the members of the Board of Control, all of whom have been so patient with my shortcomings, who have always been so eager to assist in lightening the burdens, and whose unfailing kindness and consideration have made a hard task comparatively easy, I wish to express my gratitude.

No Hospital was ever blessed with a governing body that ruled with greater tact, kindness, firmness and justice than you have shown in directing the affairs of this institution.

Yours respectfully,

W. A. GORDON,
Superintendent.

Northern Hospital.

MATRON'S REPORT.

For the biennial period ending June 30, 1908.

DR. W. A. GORDON, *Superintendent.*

SIR:—Herewith is an account of the foods and delicacies prepared in the kitchen during the last two years. Also a list of the articles made and repaired in the mending and sewing rooms.

Yours respectfully,

MINNIE SCHREIBER,

Matron.

Fruits—Pieplant, 6 qts.; Strawberries, 48 qts.; Strawberry jam, 6 qts.; Currants, 16 qts.; Raspberries, 40 qts.; Blackberries, 24 qts.; Blackberry jam, 10 qts.; Blueberries, 18 qts.; Plums, 48 qts.; Peaches, 20 qts.; Cherries, 48 qts.; Currant jelly, 72 glasses; Apple jelly, 48 glasses; Tomatoes canned, 1,172 gallons.

Sweet Pickles—Peaches, 36 qts.; Pears, 60 qts.

Pickles—Sauerkraut, 56 barrels; Piccalilli, 600 gallons; Chillisauce, 300 gallons; Cucumbers, 48 barrels; Salad pickles, 6 gallons; Pepper pickles, 10 gallons.

MENDING ROOM.

Articles repaired—Aprons, 500; Bedspreads, 20; Clothes bags, 400; Bathtowels, 200; Hose, 10,172 pair; Jackets, 24; Napkins, 48; Overalls, 70; Pillow cases, 40; Pants, 60; Pants shortened, 172; Strong dresses, 98; Strong suits, 20; Sheets, 300; Table cloths, 162; Under drawers, 1,280; Under vests, 5,972; Vests, 62.

SEWING ROOM.

Articles made—Aprons (carpenter) 4; Aprons (men) 315; Aprons (women) 41; Aprons (dress) 16; Aprons (rubber dress) 2; Aprons (rubber men) 16; Billiard table covers, 4; Blanket shoes, 24 pair; Baby outfits, 4; Bibs, 12; Bags (feather) 18; Bags (clothes) 72; Bags (clothes pins) 18; Blankets (strong) 3; Blankets (hemmed) 172; Bath towels (hemmed) 144; Coffee sacks, 24; Clothes curtains, 8 pair; Camisoles, 4; Camisole strings, 100 yds.; Curtains (cheese cloth) 60 pair; Curtains (hemmed) 16 pair; Covers (table) 72; Curtains (half) 18 pair; Dresses, 743; Dresses (entertainment) 8; Dresses (night) 551; Dresses (bed) 2; Dresses (denim) 18; Dresses (strong) 18; Dusters, 48; Door pads, 48; Holders, 62; Milk strainers, 24; Mattress ticks, 114; Napkins (table) 553; Napkins (sanitary) 582; Pillow cases, 1,401; Pillow ticks, 108; Sheets, 1,785; Sheets (restraint) 6; Sheets (mangle) 16; Skirts, 557; Strong suits, 12; Shirt waists, 6; Towels (roller) 294; Towels (yard) 732; Towels (one half yard) 1,384; Wrappers (dress) 161; Table cloths, 323.

Carpenter's Report.

CARPENTER'S REPORT.

DR. W. A. GORDON, *Superintendent.*

SIR:—I herewith present a list of the principal jobs of work done during the last two years.

Built form for septic tank.

Repaired new cow barn.

Tore off old shingles on cow barn, and replaced the boards for covering of 20,000 ft. roofing.

Repaired 195 ward locks.

Laid 30,000 ft. hard wood flooring.

Remodeled the old pump house, making an Academy of Domestic Science.

Put up 11,500 ft. steel ceiling.

Built 41 lockers on North side.

Tore out the old cold storage, took out timbers, put up steel I beams to carry floor above, and built form for the concrete.

Fixed up first floor center for tile.

Repaired floor in laundry.

Worked on addition to pump room.

Built 9 shoe racks.

Repaired 597 chairs.

Repaired 78 tables.

Repaired 71 bureaus.

Repaired 300 windows.

Repaired 209 screens.

Repaired 61 lawn settees.

Repaired 210 doors and other small jobs of repair.

Yours respectfully,

A. A. JOHNSON,
Carpenter.

Northern Hospital.

MASON'S REPORT.

DR. W. A. GORDON, *Superintendent.*

SIR:—I herewith present a list of the most important items of work done in this department during the last two years.

3,400 sq. ft. of cement walk.

8 culverts.

2 concrete bridges.

Set of scales and railroad track in boiler room.

1 set of concrete stairs (12 steps).

Remodeled Domestic Science Academy.

Concrete work on cold storage.

Solid concrete mangers and floor of cow barn.

Concreted floor of power room, also main center hall for tile.

Built cement foundation for pump power house.

Set and bricked in two kettles for hog house.

Cut brick floor for plumber on North wing.

Built cement base in power house.

Enlarged door from center to rear.

Removed brick walls from back of boilers.

Placed flue blowers in four boilers and rebricked same.

Changed elevator, north wing.

Built cement floor, peeling room.

Cement floor from Ward 2 North to hall bath house.

Built tank cow barn.

Placed two set pipes in filter bed, No. 2.

Built four cement valve houses, septic tank.

Removed old boiler in green house.

Replaced old brick wall at green house also boiler.

Built concrete tank, elk yard.

Cut wall for plumber, Wards 1, 8 and 9 South. Replaced same.

Whitewashed ceiling and side walls in basement from end to end.

Kalsomined North and South side bath houses, also club house.

Built one concrete foundation for scales at barn.

Placed pipe filter bed, No. 3.

Yours respectfully,

JULIUS PISTOHL,
Mason,

Painter's Report.

PAINTER'S REPORT.

DR. W. A. GORDON, *Superintendent.*

SIR:—I herewith present a list of the principal jobs of work done during the last two years.

Painted machine shop.

Painted filter room.

Painted Academy of Domestic Science.

Painted baker shop.

Painted rear kitchen.

Painted center kitchen.

Painted laundry.

Set 750 lights of glass.

Kalsomined and painted three wards.

Kalsomined and painted Turkish bath rooms, North and South.

Painted cow barn.

Painted first center hall.

Painted part of third and fourth center.

Painted cold storage.

Tarred center roof.

Put new paper on half of the boiler room.

Painted club house.

Yours respectfully,

J. T. HARWOOD,

Painter.

Northern Hospital.

ENGINEER'S REPORT.

DR. W. A. GORDON, *Superintendent.*

SIR:—The last two years have been very busy ones in the engineer's department of the Northern Hospital. There have been an immense number of small repairs. Many closets have been blocked up by patients and attendants throwing in clothing, paper and rubbish of various kinds. Everybody connected with the department has been busy every hour of every day, Sundays included. Herewith is a statement of the principal work done during the biennial period:

The old brick smoke stack has been built 25 ft. higher; the old steel stack torn down to the roof and capped, doing away with the old induced draft.

A new 2 ft. track has been installed in front of boilers on which are operated 10 steel coal cars.

Scales have been installed on the main track running to the coal shed for weighing coal and ashes.

Four Diamond flue blowers have been installed in the four H. & I. boilers.

Blow off pipes have been renewed in these same boilers, extra heavy 4" pipe being used, and new blow off valves installed, and new linings put in furnaces.

New throttle valves have been placed on fire pump to take the place of old lever valves, which became leaky.

Returns from steam heating coils and sweat boxes in both bath rooms have been rearranged, bringing the hot water back to the boilers instead of discharging in sewer.

The old pump house at the lake has been rewired for electric lights and new fixtures put in. Has been piped for hot and cold water, and a new closet, bath tub and lavatory installed. Heat is obtained from a new furnace.

A new switch has been installed on the switch board, and new feeder wire run to motors in laundry, machine shop, bakery, compressor room and peeling room.

A 13 ton ice machine belted to 120 H. P. motor has been installed to take the place of old cold storage.

New cold storage has been wired, using conduit; new butcher shop piped for hot and cold water and new enameled sink put in.

A potato peeler has been installed in peeling room, belted to $\frac{1}{2}$ H. P. motor.

Wire was run to carpenter shop, and an old motor installed which was originally direct connected to an old Quimby pump, the old pump being taken off and pulley placed on shaft, belted to shaft in carpenter shop, taking the place of the old engine, which on account of its distance from boilers was an expensive engine to run.

Engineer's Report.

The cow barn has been rewired and new lights put in, and piped for cold water.

Barn motor has been rewired and raised to the upper floor, where it is belted to feed grinder, feed cutter and bone grinder.

The sewer to rear kitchen, bakery and peeling room has nearly all been taken out and new soil pipe traps installed.

The scullery of general dining room has been piped for drinking water.

Six new 4" stacks have been run from main sewer out the roof on the wards and piped complete 6- 3 bowl lavatories, 12- 4 bowl lavatories, 18 slop sinks, 7 foot baths and 6 bath tubs.

About 2,000 ft. of old water pipe has been taken out and replaced by new galvanized pipe.

A drinking fountain has been placed in the front center hall for the accommodation of visitors.

About 1,000 ft. of old gas pipe has been taken out, and used for the purpose of conveying drinking water to the animals and fowls about the place.

Many other minor jobs have been attended to such as:

Repairs on kitchen utensils.

Repairs on farm machinery.

Repairs on electric lights.

Repairs on toilet rooms.

Repairs on pumps.

Repairs on boilers.

Repairs on engines.

Yours respectfully,

F. M. BEMIS,
Engineer.

Northern Hospital.

Northern Hospital.

STATISTICAL FORM, STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of Charities and Corrections, adopted May 15, 1906.

Name of institution, Northern Hospital for the Insane.

Population.	1907.	1908.
Number of inmates at beginning of year.....	634	632
Number received during the year.....	626	629
Number discharged, paroled or died during the year.....	628	649
Number at end of year.....	632	612
Daily average attendance, i. e., number of inmates actually present during the year.....	622	631
Average number of officers and employes during the year.....	151	149

EXPENDITURES.

Ending June 30	1907.	1908.
Current expenses:		
1. Salaries and wages.....	\$54,306 53	\$57,214 73
2. Clothing.....	8,237 86	8,579 94
3. Subsistence.....	46,674 66	49,677 67
4. Ordinary repairs.....	10,050 86	10,234 88
5. Office, domestic and out door expenses..	22,059 12	25,862 23
Total.....	\$141,329 03	\$151,569 45
Extraordinary expenses:		
1. New buildings, lands, etc.....		
2. Permanent improvements to existing buildings.....	\$17,227 67	\$15,938 13
Total.....	\$158,556 70	\$167,507 58

Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
- Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
- Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
- This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicine, engineer's supplies, postage, freight, library, etc.

Superintendent, Dr. W. A. Gordon.

WISCONSIN SCHOOL FOR THE DEAF.

THIRTEENTH BIENNIAL REPORT

OF THE

WISCONSIN SCHOOL FOR THE DEAF

AT DELAVAN, WISCONSIN

FOR THE BIENNIAL PERIOD ENDING JUNE 30th, 1908.

OFFICERS AND TEACHERS.

E. W. WALKER.....	SUPERINTENDENT AND STEWARD
E. D. FISKE.....	ASSISTANT STEWARD
Mrs. E. W. WALKER.....	MATRON
TILLIE CANNON.....	ASSISTANT MATRON
E. J. VINCENT.....	BOYS' SUPERVISOR
W. M. STILLMAN.....	ENGINEER
C. C. BLANCHARD.....	PHYSICIAN

SUPERINTENDENT'S REPORT.

DEHAVAN, WIS., July 1, 1908.

To the State Board of Control:

GENTLEMEN: The close of another biennial period, the third of my tenure here, makes it my duty to report to you upon the condition, progress and needs of this school. I, therefore, take pleasure in submitting to you this Thirteenth Biennial and Fifty-sixth Annual Report of the Wisconsin School for the Deaf.

GENERAL CONDITION OF THE SCHOOL.

The biennial period just closed has witnessed conditions here that have been very satisfactory. The three-fold ideal which this school stands for is to make each student intellectually bright, industrially capable and morally sound. Through the faithful and efficient efforts put forth by the officers and teachers this ideal has been more nearly approached during the past biennial period than at any previous time within my knowledge. We have just graduated a class of eighteen members, nine young men and nine young women. The average capability of the members of this class is way beyond that of most deaf young men and women and will, indeed, compare creditably with many hearing ones. I have been in public and normal school work all of my life but I have never graduated a class of hearing people whose average strength of character excels that of these deaf graduates. They have finished their academic course which includes all of the common branches taught in graded schools for the hearing with some high school work, as in Bookkeeping, English History, General History, Civics and a few other branches. Four members of this class have taken their examinations for admission to Gallaudet College at Washington, D. C., and have been admitted. Each

SCHOOL FOR THE DEAF-INDUSTRIAL AND MANUAL TRAINING BUILDING.

Northern Hospital.

STATISTICAL FORM, STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of Charities and Corrections, adopted May 15, 1906.

Name of institution, Northern Hospital for the Insane.

Population.	1907.	1908.
Number of inmates at beginning of year.....	634	632
Number received during the year.....	626	629
Number discharged, paroled or died during the year.....	628	649
Number at end of year.....	632	612
Daily average attendance, i. e., number of inmates actually present during the year.....	622	631
Average number of officers and employes during the year.....	151	149

EXPENDITURES.

Ending June 30	1907.	1908.
Current expenses:		
1. Salaries and wages.....	\$54,306 53	\$57,214 73
2. Clothing.....	8,237 86	9,579 94
3. Subsistence.....	46,674 66	49,677 67
4. Ordinary repairs.....	10,050 86	10,234 88
5. Office, domestic and out door expenses..	22,059 12	25,862 23
Total.....	\$141,329 03	\$151,569 45
Extraordinary expenses:		
1. New buildings, lands, etc.....		
2. Permanent improvements to existing buildings.....	\$17,227 67	\$15,938 13
Total.....	\$158,556 70	\$167,507 58

Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
- Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
- Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
- This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicine, engineer's supplies, postage, freight, library, etc.

Superintendent, Dr. W. A. Gordon.

WISCONSIN SCHOOL FOR THE DEAF.

THIRTEENTH BIENNIAL REPORT

OF THE

WISCONSIN SCHOOL FOR THE DEAF

AT DELAVAN, WISCONSIN

FOR THE BIENNIAL PERIOD ENDING JUNE 30th, 1908.

Wisconsin School for the Deaf.

tered. This with the decoration of the same and of the main corridor in the administration building will cost approximately \$1,300.00.

Our heat plant is already taxed to its uttermost. In fact in extreme weather it can not do the work put upon it now. The new buildings already completed and in process of construction makes it absolutely essential that we have one more heat unit consisting of one boiler 72 in. by 16 ft. with furnace. There is no room for this in our present boiler room and an excavation must be made under the roadway between the refrigerator building and laundry. This will be a somewhat expensive place in which to install the furnace and boiler but there is no other available space. This will cost \$3,000.00.

We need more coal room. Our present sheds hold nearly five hundred tons, not quite half a year's supply, and we experience so much trouble in trying to get the coal during the fall and early winter months that we should have our capacity increased at least three hundred tons. Besides this, we now keep our hard coal for range use in the wood shed, a long distance from the kitchen and in a building that is now only temporary and will soon be abandoned. The new shed should include a place for this anthracite coal. This will cost about \$3,500.00.

The administration building, the boys' dormitory and the school house need re-shingling. The estimated cost of this is \$500.00. Our hog pen, never well arranged, and now partially decayed, looks entirely out of place by the side of our new barn. I recommend that a new hog pen be erected at a cost of \$600.00.

In the erection of the new industrial building a place was reserved and foundation laid for two bowling alleys. As offering a wise opportunity for wholesome exercise for boys who are quite closely housed during the long winter months I recommend that the alley be now placed upon this foundation. The cost will be about \$800.00.

It seems to me that we ought to have land enough so that we might raise all of the vegetables needed in this school and most of the feed for the horses and cows. The addition of from forty to sixty acres would I believe be a money saving proposition for us. This would cost in the neighborhood of \$8,000.00. A move

Superintendent's Report.

in this direction would be to increase the effectiveness of our present low pasture by underdraining. This will cost about \$600.00.

Our water tank is in the attic of the main building. It has been in constant use since 1881. It is somewhat pitted although could probably be used a time longer, but I think the place is thoroughly objectionable and it is too small to supply an institution of this size. We should have an outside ten thousand gallon tank erected on a steel frame. The cost of such a one would be about \$1,200.00 including the substructure.

The forge room in the new industrial building has never been equipped. We have, of course, the old equipment which we had in the old building but it is not sufficient now. To add four forges and furnish an exhauster and motor with the necessary additional tools will cost \$600.00.

As you know I have been very anxious to secure a bowling alley here in the new industrial building. There is an excellent room for it and the foundation timbers were set when the building was erected last year. Two alleys put in this room will cost \$800.00. This might seem an unnecessary expenditure to some people but when it is recalled that I have over one hundred boys here who have no long distance to travel to school and therefore, no opportunity for working off surplus physical energy during the long winter months, the conclusion is clear that such an opportunity for physical exercise as a bowling alley gives is a real moral uplift.

All of the above recommendations I hope your body will urge upon the legislature at its next session. I know the objection will be raised that a good deal was done for us two years ago. This is true and I am deeply grateful for it, but for many, many years nothing was done in the way of giving this school a modern equipment and that long neglect can not be made up by a single appropriation. I am ambitious for this school and shall not rest until we are able to do as much for our students as is done in any similar school in the country. It will be further argued that because of many other demands upon the legislature our appropriation must suffer. This argument means that the deaf are to be made to pay for the needs of other classes

Wisconsin School for the Deaf.

of unfortunates. I would not argue against the establishment of any worthy institution that will provide comfort and better training for any class of defectives but I do object strenuously to the argument that because the state establishes other institutions the income for institutions already established must be cut down. This in effect supports one class of unfortunates at the expense of another instead of at the expense of the able bodied people of the state.

ATTENDANCE.

There have been enrolled in this institution during the past biennial period 243 students. This is an increase of 8 over the last biennial period. Of these 103 are girls and 140 are boys.

Statistics of attendance will be given on succeeding pages. I also append a copy of the year book which will set forth to you much more detailed information regarding the work of this institution.

It is a matter of great gratification to be able to state that while the executive committee has not yet held its formal meeting, nevertheless, six out of its seven members who were present at the Ogden convention stated definitely that they favored Wisconsin as the next meeting place for the convention to be held in the summer of 1911. I believe this will be a real uplift to Wisconsin education of the deaf. It in itself constitutes a compliment to our state which was also honored by being given the chairmanship of two of the most important sections of the convention, the normal and the industrial sections. No other state was so favored. I trust it is not out of place for me to express here publicly my high appreciation of the faithfulness, zeal and efficiency manifested by the officers and teachers of this school and to express to your honorable body my gratitude for the many evidences of confidence you have reposed in me. Your constant support of my plans and sympathetic interest in the welfare of this institution has made my work exceedingly pleasant.

Respectfully submitted,

E. W. WALKER,
Superintendent.

Wisconsin School for the Deaf.

COUNTY REPRESENTATION.

By attendance of pupils, June 30, 1908.

- Ashland—Martha Blumel, Glidden; Margaret Schmidt, Glidden; Alice Sturgulewski, Ashland; Iline Yorton; Clara Anderson, Ashland.
- Adams—Veda Billings, Plainville.
- Barron—Mary Kollenbach, Prairie Farm; Edward Svacina, Dobie; Andreas Schramski, Turtle Lake; Walter Van Horn, Mills Center; Ethel Calkins, Chetek.
- Bayfield—Wm. Harvey, Washburn.
- Columbia—John Confer, Pardeeville; Leslie Davis, Pardeeville.
- Chippewa—Tillie Guenther, Chippewa Falls; Henry Hebert, Chippewa Falls.
- Clark—Meta Hansmann, Thorp; Harry Hansmann, Thorp; Lynn Harding, Neillsville; Edward Hubing, Neillsville; Jessie Oldham, Neillsville; Huldah Rehberg, Columbus; Minnie Rehberg, Columbus; Alphonse Sutkiewicz, Withee.
- Crawford—Earl Bailey, Soldiers Grove; Albert Thomas, Eastman; Sadie Thomas, Eastman.
- Calumet—Matthew Fisch, Hilbert Junction.
- Dodge—Harold Linde, Beaver Dam; Hubert Suhr, Hustisford; Elsa Suhr, Hustisford; Amelia Schwartz, Burnett Junction; Willie Uebel, Juneau; Bertha Wolfgram, Rolling Prairie.
- Dane—Clara Erdahl, Stoughton; Earl Erdahl, Stoughton; Clarence Erdahl, Stoughton; Mabel Erdahl, Stoughton; Merle Hook, Madison; Joseph Hamre, Morrisonville; Tillie Jensen, Stoughton; John Marter, Madison; Addison White, Madison; Stella Goff, Stoughton; Alvan Hahn, Dane; Mary Stein, Madison; George Sands, Brooklyn.
- Dunn—Anna Johnson, Colfax; Helen Wilcox, Menomonie.
- Douglas—Pearl Stensrud, Superior.
- Eau Claire—Nellie Stone, Augusta; Etta Phillips, Eau Claire.
- Forrest—Clarence Peters, Crandon.
- Fond du Lac—Gordon Bristol, Oakfield; Ambrose Castonia, Fond du Lac; Kenneth Johnson, Waupun; Stanley Tomlinson, Waupun.
- Green—Leon Bongey, Monroe; Lester Bongey, Monroe; Gwendolin Broderick, Brodhead; Marian Karney, Brodhead.
- Grant—Anna Bausch, Cassville; Bessie Munns, Fennimore; Belle Reed, Boscobel; Belle Ramsour, Fennimore; Ruby Starr, Lancaster; Roy Thompson, Fennimore.
- Iowa—Willie Eagan, Avoca; John Jones, Mineral Point; Elsie Jones, Mineral Point; Elmer Prideaux, Dodgeville; Elsie Buckingham, Ridgeway.
- Iron—Harris Borysecka, Hurley; Frank Dzralkowski, Hurley.
- Jefferson—Carrie Fleming, Jefferson; Alfred Mules, Palmyra; Florence Tyler, Jefferson; Herman Reige, Waterloo.
- Juneau—Reinhardt Schneider, Fink.
- Kenosha—Hazel Birchard, Kenosha; Lillian Fish, Kenosha; Louis Seidischlag, Wilmot.
- Kewaunee—Willie Gallenberger, Kewaunee.

County Representation.

- La Crosse—Frances Kabat, La Crosse; Elise Lee, La Crosse; Harry Willard, La Crosse; John Capper, Mindoro.
- LaFayette—Guy Anderson, Argyle; Brice Campbell, Woodford; John Matson, Dunbarton; Frank Stewart, Woodford; Clarence Lewis, LaFayette; Harry Swanson, Gratiot.
- Langlade—John Kettner, Antigo; Wilda McGregor, Post Lake; Ira St. Louis, Eland Junction.
- Lincoln—Elizabeth Herman, Tomahawk; Arthur Leisman, Merrill; Joseph Nick, Tomahawk; Olaf Sorrenson, Merrill.
- Marathon—Henry Chaignot, Wausau; Curtis Kidd, Spencer; Lucy Ceir, Edgar; Nellie Damon, Wausau; Clara Damon, Wausau; Julius Goetsch, Wausau.
- Manitowoc—Theodore Erickson, Collins; Emil Gauger, Kellnersville; Clara Gauger, Kellnersville; Theodore Ziarnik, Manitowoc.
- Monroe—Hubert Feelder, Tomah; Christian Hirte, Norwalk; Emily Hirte, Norwalk; Gertrude Hirte, Norwalk; Norah Hirte, Norwalk; Amy Peterson, Tomah; Charles Reidell, Sparta.
- Marinette—Mabel Nelson, Peshtigo; Lydia Schroeder, Peshtigo; Paul Vandenboom, Marinette; Louis Vandenboom, Marinette.
- Milwaukee—Minnie Dunc, Milwaukee; August Groth, Milwaukee; John Gableman, Milwaukee; Eva Halliday, Milwaukee; Herbert Huchthausen, Milwaukee; Henry Hein, Milwaukee; Walter Lorch, Milwaukee; Nona Maahs, Milwaukee; Ellis Mongon, Milwaukee; Martha Neuhaus, Milwaukee; Lottie Sprague, Milwaukee; Frank Schriell, Milwaukee; Lucille Bodden, Milwaukee; Clarence Heiden, Milwaukee; Louis Huckbarth, Milwaukee; Arnold Klatke, Wauwatosa; William Ost, Milwaukee; George Puttler, Milwaukee; Sophia Zareck, Milwaukee; Julia Zareck, Milwaukee.
- Outagamie—Donald Clark, Appleton; George Hahner, Kaukauna; Willie Hahner, Kaukauna; Willie Huss, Little Chute; Lawrence Weigand, Appleton; Marie Buckman, Hortonville; Barbara Buckman, Hortonville.
- Oconto—Eric Olsen, Oconto.
- Ozaukee—Alma Ehmke, Saukville; Christopher Port, Grafton.
- Pierce—Charles Booth, Diamond Bluff; Floyd Bulmer, Elmwood; Lyle Bulmer, Elmwood; Helmer Hanson, Spring Valley; Sherman Pierce, Elmwood; Grace Scroggie, River Falls.
- Polk—Victor Broberg, Trade Lake; Herold Hedlund, Frederic; Esther Hultquist, West Sweden.
- Price—Ray Martin, Phillips.
- Richland—Henrietta Greenheck, Lone Rock; Mary Greenheck, Lone Rock; Benjamin Greenheck, Lone Rock.
- Racine—Peter Bengaard, Racine; Edwin Drinkwine, Racine; Charles Hlenosky, Racine; Mida Wilson, Racine; William Wilson, Racine.

EXPENDITURES.

Ending June 30.	1907.	1908.
Current expenses:		
1. Salaries and wages.....	\$26,778 91	\$23,494 10
2. Clothing.....	242 67	31 69
3. Subsistence.....	11,337 63	12,282 18
4. Ordinary repairs.....	1,823 62	2,192 73
5. Office, domestic and outdoor expenses...	10,197 82	16,100 99
Total.....	\$50,380 65	\$59,101 69
Extraordinary expenses:		
1. New buildings, lands, etc.....	\$35,987 03	23,475 64
2. Permanent improvements to existing buildings.....	3,437 58	2,440 71
Total.....	\$39,805 26	\$85,018 04

Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
- Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
- Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
- This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

SUPERINTENDENT'S REPORT.

JANESVILLE, WIS., July 1, 1908.

To the Hon. State Board of Control of Charitable, Reformatory and Penal Institutions:

GENTLEMEN:—In the performance of my duty I have the pleasure to submit herewith the report of the Wisconsin School for the Blind for the biennial period ending June 30, 1908.

Although there must of necessity be much similarity in the biennial report of this Institution, as well as the other institutions under your control, we are glad to avail ourselves of the opportunity to give to the public a brief account of what has transpired concerning the work and progress of our people during the past two years. The one thing to be regretted most is that the information embodied in these various reports comes before the eye of but few of the citizens of our state, who, we are convinced, are sadly lacking in their knowledge of what is being accomplished in our institutions. "Pity 'tis, 'tis true," for this fact is largely responsible for the prejudice so deeply seated in the minds of so many persons against institutions in general. That this prejudice results primarily in the lowering of the educational standard, and secondarily in the increase of cost, and responsibility on the part of the state in caring for its afflicted classes cannot be seriously questioned. One is furnished much food for thought and reflection along these lines, when apparently intelligent people ask our pupils, while they are en route to and from their homes, if they have windows in the school building, and even manifest surprise when they learn that we actually have lights, and that the pupils do not have to be fed and led around to their classes and other places. Inferentially it is not strange that we are frequently referred to as an asylum, or home, instead of a school. We wish some method could be followed, whereby the people of our state

Wisconsin School for the Blind.

could become more familiar with its institutions, and this one in particular, and not be limited in their information to a report or an occasional newspaper clipping. It has been our aim to work through the public school system of the state, in order that children who are being deprived of the chances to secure an education therein, on account of defective vision, may be sent to us. While we have secured some co-operation from school officers and teachers, it is not at all what we believe it should be, and very few of the county superintendents do their full duty by reporting these cases as provided by law. Although we have a compulsory law, it does not seem to compel, and there is good reason to believe that many blind children, and it is doubtless quite true with the deaf, are growing up in ignorance, even though advantageous facilities for an education are at hand. It seems to us that if a state agent, or field officer, could be provided, whose duty it would be to travel over the state and give talks on our institutions, and at the same time look up children that should be in this school, or at Delavan, or some other school so equipped as to provide them with an education, and enforce their attendance by law, when necessary, much good might be accomplished, and in the end a saving would accrue to the state. While on this subject of familiarizing the public with our institutions, I wish to say that I believe that the policy inaugurated by your Honorable Board two years ago, of having as many members of the legislature as possible personally visit the different institutions before the convening of the legislative session, was productive of immeasurable good. About one ninth of the members visited this school, and went away with a clearer idea of the life and work that was being carried on here.

1907-1908.....	47	50

SCHOOL FOR THE BLIND—READING CLASS.

Superintendent's Report.

It will be noticed by comparing the last two with the previous two years, that there has been some falling off in our enrollment, and more so with the males than with the females. There appears to be no very satisfactory way to account for this, except for the fact that several of our larger boys had reached an age when they thought they ought to be out in the world doing for themselves, and, consequently, sacrificed the finishing years of their course for a fancied commercial advantage. Our graduating class for last year was a little larger than for some years past, consisting of one young lady and three young men. This year it was back to two again, with each sex represented, and if all the seniors return in the fall, it promises to be an unusually large class for the coming year: viz., five young ladies and four young men.

There have been a number of changes in our staff since the last report, caused by more alluring salaries elsewhere, changes in vocation, leave of absence, etc., but with possibly one exception, we are confident no loss was suffered by the change. We sincerely believe that two years of successful and progressive work have been accomplished. We have not been sorely tried by questions of discipline, and the spirit of willingness and cheerfulness manifested by the pupils, and the faithful and efficient service rendered by the teachers and employes, is a subject for much commendation.

LITERARY.

The establishment of a course of study anticipated in our last report, has been productive of much good in several ways. Our pupils are now graded more carefully, despite irregularity in their ages and degree of previous preparation, and it is pleasing to report that a number in the junior and senior classes are already making plans, for the first time in years, to pursue work in higher institutions of learning after finishing the course here. There are several features about the work of our pupils, that need be given more attention such as writing and a better knowledge of business methods. Apparently slight attention has been given to these subjects in times past, with the result that too many of the pupils in our high school branches are

Wisconsin School for the Blind.

unable to write with a pencil or pen, when they should be able to at least sign their names. Inasmuch as a number of the graduates of this school have been successfully engaged in business, it does seem as though instruction in the elementary principles of commercial law and practical training in book-keeping and business methods, would greatly assist pupils who expect to deal in a business way with the public, and it shall be our endeavor to increase the efficiency of the course along these lines.

MUSICAL DEPARTMENT.

In a musical way we have advanced even more than could reasonably be expected, when all the unfavorable conditions and circumstances are taken into consideration. In the first place, it so happened that nearly all of the members of the last two graduating classes were well advanced in music, both vocal and instrumental. When we add to them the other pupils who dropped out of school, a large majority of whom were also musical, the real situation can be better understood. Large gaps were made in our orchestra and chorus, and in the latter it has proved extremely unfortunate, for we have been lacking for several years in male voices, and it will doubtless be some time yet before we can fill the void. We were not crippled quite so badly in the orchestra, as we have considerable young material that seems very promising. The young ladies' and the young men's quartettes also suffered on account of the absentees. In the second place, Mrs. J. H. Jones, who has had charge of the piano and organ work for a great many years, obtained a year's leave of absence to travel in Europe, and a substitute teacher was engaged to take her place during the year just closed, and her work was carried out very satisfactorily. Nevertheless there is always a change of interest on the part of the pupils when teachers are thus substituted, and in spite of the best efforts shown, the work is bound to suffer to a greater or less degree. Notwithstanding these several obstacles, we have felt much pride in the advance made in our musical department. Our proficient pupils have been called upon on numerous occasions to take a place on the program at various church exercises, recitals, conventions, etc, while the orches-

SCHOOL FOR THE BLIND—MANUAL TRAINING.

Superintendent's Report.

tra has become so favorably known that it is unable to accept all of the engagements offered to play at the high school commencement exercises in adjoining cities. While the pupils always give a regular commencement recital, they are also given frequent opportunity to appear at the literary and rhetorical programs and social gatherings, and thereby wear off any timidity they might otherwise have in appearing before an audience. It has become a regular practice with us to give an Easter Vesper Concert, consisting of instrumental and vocal numbers, and some light oratorio or cantata by the chorus. So popular have these become that on Easter afternoon for the last two years, the seating capacity of the gymnasium has been taxed to its utmost to accommodate the visitors. One of the greatest handicaps we have to contend with at the present time is the lack of good instruments. If our work is to progress, it is imperative that we have some new first-class pianos. Of this more will be said under the subject of our needs.

INDUSTRIAL DEPARTMENT.

There has been little change in the different industrial departments. The classes in manual training have shown much interest in their work, and some very creditable pieces of furniture, such as desks, tabourets, book and magazine racks, and the like, have been turned out by them. The wisdom of establishing of such a course, particularly for the blind, has been successfully demonstrated by the results already obtained, and we regret that we have not yet been able to satisfactorily arrange for classes in this work for the girls. However, they have done some very nice work in their sewing classes, and many of the articles made by them, put on display, find ready purchase. The cooking classes last year were sources of earnest attention and effort, but during the past year we have been unable to carry them on on account of conflicting class periods and a change of housekeeper, who has charge of this work. We plan to resume them, however, the coming year. There have been about the usual number taking instruction in weaving and willow work, and while we have no authentic report in regard to

Wisconsin School for the Blind.

the number of pupils that have taken up weaving after leaving the school, we feel certain that the blind, with slight assistance, can pursue this work with no small degree of success. As for the willow work, there is tangible evidence at hand of its availability as a means of profitable occupation. Quite a number of our former pupils are now at work in the workshop for the blind, in Milwaukee, and are earning good wages. In truth, one of them has become so expert, and able to earn such good wages that it has deadened his ambition for an education, and he has permanently dropped out of school, a circumstance greatly to be deplored in his particular case. Feeling that this one instance is the exception to the rule, we see no reason to change our opinion, and still maintain that the willow work is a remunerative source of employment for the blind. The instruction they receive while here really accomplishes a two fold purpose, in that they learn sufficiently about it to enable them to take up the work in the workshop without being obliged to sacrifice any expense or time as an apprentice, and the time devoted to it here did not detract any from their work, but in most instances was an utilization of time that would otherwise have been wasted. Some forty pupils are daily receiving instruction in the use of the typewriter, and many have become so dexterous in its use that one could not tell that the work was done by a blind person. We are just at present considering the advisability of putting in some machines of different makes, as all of our machines are of one kind, the Remington, thinking by so doing that the pupils would thereby become familiar with the different style of key boards. Piano tuning still holds out the greatest attraction for our young men. There were 18 carrying the work last year, and 13 the past year. In the reports received from pupils who have finished the course and gone out in different parts of the state to tune, we find a source of much encouragement to those planning to choose it for their occupation. There is one matter in this connection that I wish to particularly direct your attention, and that is the need of an automatic piano player for the use of this department. This wonderful invention, while known under many different names, has one basic principal on construction, and in-

SCHOOL FOR THE BLIND—CLASS IN PHYSICAL CULTURE.

Superintendent's Report.

asmuch as they are becoming so general in their use, our tuners are going to be seriously handicapped if they go out from here without a detailed knowledge of the construction of this attachment, and the ability to repair it the same as the instrument itself. Furthermore, the installation of one of these players, which I understand are now made as a part of the piano, and therefore might constitute one of the number of new instruments needed and referred to in another part of this report. It would be advantageous in another respect: viz., it would be the means of placing before the pupils pursuing the musical course all of the compositions of the great masters, with which they could become familiar in no other way, and the value of which is immeasurable. To be sure, such playing would be somewhat mechanical and lacking in expression, but to the student this would be insignificant as compared to the knowledge they would acquire of the technique.

PHYSICAL CULTURE.

Regular and systematic exercises in gymnastics have been given to all the pupils, and also considerable special individual work, which has resulted in improving the physical condition of most of them. No one longer questions the necessity for building up a strong body in order to build up a strong mentality, and, as has been repeatedly stated, our pupils need more attention in this particular line than normal children, and their physical work should be so supervised as to bring out the best that can be developed in both body and mind. Every year we can notice marked improvement in the courage and self reliance of our pupils, and it is directly traceable to their physical training. During the winter season games and drills have been held in the gymnasium, while in the fall and spring outdoor sports have been carried on. A basket ball team from among the pupils was formed last winter, and played many an interesting game with a team composed of teachers. This last spring a National Athletic Association of the Schools for the Blind was formed, and sixteen of the state schools have already joined. An annual telegraphic field contest is to be held on the third Saturday

Wisconsin School for the Blind.

of each May, and trophies awarded to the school scoring the highest number of points. Owing to the late date at which this organization was perfected, and the unusual lateness of the opening of the spring season, we were greatly handicapped in training for the several events in the test recently held, and were, therefore, not greatly disappointed in our failure to carry off high honors. We plan to lay out a running track this fall, and make early preparations for next year's meet, and confidently believe that in this new association a much needed stimulus has been found for athletic progress and development. One of the strongest features of this organization is that the several tests of strength and skill are had on our own grounds, while simultaneously they are being held at the different state schools, and the results promptly wired to the Central Committee, thereby maintaining the spirit of competition, and at the same time economizing in time and money, that would necessarily involve were they to meet at a central place for the tests. No arrangements have been perfected so far for events for the girls, but it is hoped that such steps will be taken in due time that will enable them to compete in these annual tests.

Our pupils are anxiously looking forward to the time when our new music building will be completed, and they can have the use of the swimming pool to be constructed in the basement thereof. That this will prove of incalculable benefit to our people, has been fully demonstrated by those schools so equipped.

LIBRARY.

Both the ink print and embossed libraries have been sources of constant interest and occupation. In fact, it is safe to say that since our last report the amount of reading and reference work that has been done in the point library has increased nearly fifty per cent. This rate of increase is also proportionately true in the circulation of our point books to blind readers throughout the state. It has been some years since any quantity of books was added to our embossed library, and after the necessary text books are purchased, very little of the U. S. government fund is left to be applied for this purpose. The result is that we are not keeping abreast of the times in providing our people with

Superintendent's Report.

the best literature that can be had for them. Furthermore, the constant passing back and forth through the mails of the large and cumbersome point books, even though well encased in heavy canvas bags, is extremely hard and wearing on them, and we have reached a stage where we must spend considerable money in rebinding and replacing a number of them. To this we will refer again under the subject of our needs. To the usual supply of daily papers and leading magazines and periodicals that come to our tables, there have been added in the past two years two very interesting and worthy publications. I refer to The Outlook for the Blind, an ink print quarterly, published at Boston, Mass., by Chas. F. F. Campbell, under the auspices of the Mass. Society for the blind. It handles in an able and progressive manner all matters relating to the education and welfare of the blind, both here and abroad, and has already proven that there was a pressing need for such a publication. The other reference is to the Mathilda Ziegler Magazine for the Blind, printed in New York through the instrumentality of a wealthy widow lady, by the name of Ziegler. This lady was long anxious to devote some of her wealth to a good cause, and after thorough investigation of different things, decided she could render valuable service and fill a long felt want by publishing and circulating, practically free of charge, a monthly magazine printed in both N. Y. point and braille, so that it could be read by every blind person in the United States who was able to read. She secured the services of Mr. W. G. Holmes as manager and editor, and what he has accomplished in making this most worthy production a success in less than two years time, is something really marvelous. The magazine consists of about fifty pages of printed matter, and is published monthly, and its contents compare favorably with many of the leading ink print magazines. We know of nothing that has proven a source of greater interest and joy to the blind, and one thing is certain, that whether Mrs. Ziegler is conscious of it or not, she has through this philanthropic act built for herself and name an enduring monument, and deserves a place in the Hall of Fame. In order that all readers of books from our circulating library may become thoroughly familiar with the provisions of the law passed by

Wisconsin School for the Blind.

congress, permitting the circulation of embossed literature through the mails free of charge, we will again publish the important features of the law.

“Books, pamphlets, and other reading matter in raised characters for the use of the blind, whether prepared by hand or printed, in single volumes, not exceeding ten pounds in weight, and containing no advertising whatever, unsealed, and when sent by public institutions for the blind, or by any public libraries, as a loan to blind readers, or when returned by the latter to such institutions or public libraries, shall be transmitted in the United States mails free of postage, and under such regulations as the Postmaster General may prescribe.

“On the upper left hand corner of the envelope or wrapper containing the matter, the name and address of the sender must appear, and on the upper right hand corner the word ‘FREE’ over the words ‘READING MATTER FOR THE BLIND.’”

SOCIAL LIFE.

There has been the usual amount of social activity during the past two years. Some very interesting debates have been held by both the Lincoln and White Rose Literary Societies, also a number of rhetorical and musical exercises. The Christian Endeavor, the Junior League and the Sunshine Club have carried on their respective work with much devotion and enthusiasm, and beside the regular Saturday night parties, which are looked forward to so eagerly and enjoyed so much, a number of socials have been held at opportune times throughout the school years. That these various social gatherings have wielded a powerful and healthful influence on the minds of the pupils cannot be doubted, and it is equally true that they have proven a strong factor in the matter of discipline.

RELIGION.

There has been no change whatever in our Sabbath day observance, and the assignment of the two Sunday services, one at nine in the morning for Sunday School, and the other at seven in the evening for general services, has been found very satis-

SCHOOL FOR THE BLIND—LATHE WORK.

SCHOOL FOR THE BLIND—READING HOUR.

Superintendent's Report.

factory. The Christian Endeavorers hold a regular meeting on Sunday afternoon at 4 o'clock, the attendance of which is entirely voluntary. While the pupils are required to attend the morning and evening services, those of suitable age are privileged to attend the churches of their preference in the city, when condition are suitable.

HEALTH.

The general health of the school has been far above the average. We must have endured the full limit of affliction the year prior to our last report, for we have not had one case of contagion since that time. In fact, the physician who has been in attendance here for the last twenty-five years, says he never has visited the school as little as during the past two years. Our ailments have been all of the light and ordinary kind commonly found among young people. We are grieved, however, to report the death of one of our young men, Carl Frederick Hoffmann during the summer vacation of 1907. He died at his home in South Milwaukee on the 4th day of August, after an illness of but a few days, of tumor of the brain. Carl, or Fred, as he was commonly known by us here, was eighteen years of age, and was just passing over the threshold from youth to manhood. He possessed many traits of character that will cause his early demise to be deeply lamented. Notwithstanding this most favorable condition of health, we have no assurance that it will prevail for any definite length of time, and the arrival of that unwelcome day will, unless better facilities are provided, find us as helpless as before to cope with and stamp out a contagious disease. To this we will refer again under the subject of our needs.

IMPROVEMENTS AND NEEDS.

A number of much needed improvements have been made in the past two years. A new roof has been put on the barn, also a portion of one on the power house has been renewed. A 40 ft. brick addition has been made to the west end of the latter building, providing us with a coal shed that permits of the storing

Wisconsin School for the Blind.

of from five to six months' supply of coal. On the east end a brick addition of 32 ft. has been added for the housing of the horizontal water tanks, that form a part of our new water system. These tanks, which are three in number, and each 7 ft. in diameter and 28 ft. long, provide an ample reserve capacity, and by being connected with an air compressor, a sufficient pressure is obtained to supply the uppermost portions of the building, and give good fire protection. This is a much more economical, and, we believe, advantageous system than the elevated tank system, and has proven very satisfactory as far as completed, but until we have drilled another well, and put in another pump and air compressor, we will not feel that we have an adequate and independent water supply of our own. This will be necessary for the reason that the rate now charged by the Water Company is much higher than we paid two years ago, which the company alleges is due to the passage of the public utility bill. It was our plan at the time we asked for the appropriation to install this system, to put in only the tanks and compressor, but inasmuch as the water company insist on an exorbitant price for leaving their water in our mains and hydrants, for reserve purposes only, and as it would be hazardous to cut it off entirely with the facilities we now have for meeting emergencies, it would seem to be good economy to put in a duplicate outfit, and we would then be entirely protected and independent. This pump and compressor should be electric driven, because of the fact that we have to pump water during the summer vacation months, when we do not fire our boilers, and, therefore, cannot have steam for our present machinery. By using the city electric current during that time, it would enable us to operate at small expense. For the completion of this water system we will need \$1,000.00. You, of course, do not need to be reminded of the fact that you recently took action to carry out the will of the Legislature in awarding a contract for the construction of a new music building. If the plans are carried out, there is every reason to believe that before the first of January, 1909, we will have realized a longfelt want, and have our music department housed in a suitable and separate building. This arrangement, together with a fine swimming tank and shower baths provided

Superintendent's Report.

for in the basement thereof, will prove of inestimable benefit to our school.

While the Legislature at its last session, was very considerate of our demands, and made an appropriation for the installing of an elevator in the main building, it was found that the amount appropriated was not sufficient for the purpose, and the matter has consequently been held in abeyance. While on this subject we would like to report that the old dummy waiter that is operated by hand, and that carries the food from the kitchen to the first and second floors, is in a very dilapidated condition, and has caused much trouble and inconvenience in getting the food to its proper destination in a clean and palatable condition, not to speak of the expense that has been caused in the breakage of large quantities of dishes. Now that we have our own water and electric supply, we should have a dummy waiter operated by one of these methods that could be depended upon. In addition to the amount heretofore appropriated for the purpose, it would probably require an additional \$1,000.00 to properly install the two elevators.

Two years ago we laid considerable stress upon the pressing need of a building for isolation purposes, and it was a source of deep regret that the Legislature, in the exercises of their judgment, did not see it as we did. Glad, indeed, we are that no outbreak has occurred to more vividly impress this fact upon the responsible parties. Nevertheless, we are still in the same helpless condition as we were three years ago when we were stricken, and what we said in our last report concerning the need of isolation facilities at this kind of an Institution, of all institutions, is just as true now as it was then, and we sincerely trust that some adequate arrangements will be provided us before an outbreak, resulting in possible fatalities, may occur.

A portion of the tile floor in the main corridor has been re-laid, and hardwood floors have been put in some of the basement corridors, the reception room, officers and teachers' dining room, also in the superintendent's parlor and dining room. All of the roofs have been thoroughly covered with paint, as has also all of the wood work in the main building, with the exception of the girls' side. A cement walk has been laid along the

Wisconsin School for the Blind.

front of the south lawn, and will do away with the pupils walking through the quantities of mud and water that they have frequently encountered there. A new walk must be laid along State St., where it connects our grounds with the city. The old board walk has been in a bad state of repair for some time, and only by constant watching and replenishing of a plank now and then, have we been able to avoid an accident. There is something over 5,000 sq. ft. of this, and with the new walks leading to the several separate entrances of the new building, a sum not less than \$700.00 will be needed for their construction.

The roof on the trades building, on account of its age, has long since passed its day of usefulness, and considerable money has already been expended in patching it up to protect the interior of the building. It is false economy to spend money for repairs on a roof in the shape that this one is in, and it is imperative that a new roof be put on this building another season, if not earlier. Up to recently it has generally been supposed that because the supporting columns and posts of the west wing of the main building were iron, that those on the east wing were also of iron, but such is not the case. They are all of wood, and as many are in a bad state of decay, it will be necessary to replace them in a short time. Judging from the pattern, it will doubtless be good policy to replace them with iron, and as they are of considerable height, and there are a number of them, it will doubtless cost in the neighborhood of \$1,000.00 to restore them and put on the roof mentioned above.

We need to add from 150 to 200 embossed books to our point library, which will cost not less than \$500.00.

It has been a number of years since any new pianos were installed here, and the last one that was purchased, a baby grand, proved quite a disappointment. Considering the constant use made of them, and the wear and tear resulting therefrom, they probably last for practice work as long as could be expected, but even after they are unfit for this service they continue to be useful, for they are then transferred to the tuning department. On account of the contemplated new music building we have refrained heretofore from pressing our needs for these new instruments, even to the detriment of the work, but now as we are

Superintendent's Report.

making preparations to occupy it, the purchase cannot longer be postponed, if we are to make the progress we should in the several departments. Mention has heretofore been made of the several advantages to be derived by having a piano player in connection with our musical and tuning departments, and it cannot be urged too strongly that this matter be given favorable consideration at the time the new instruments are purchased. We are in actual need of four new pianos, one of which should be a grand, and the cost of all of which would approximate \$1,500.00.

The time is near at hand when there must be some improvements in our laundry in the way of new machinery, for that now in use is badly worn and of an antiquated pattern. A new washer and mangle will shortly be a necessity, and if we can rely on assurances given by the manufacturers, as well as practical laundry men, the installation of such machinery would prove a financial saving in a short time, as it would doubtless enable us to dispose of the services on one laundress. The expense involved in making this change would amount to about \$500.00.

It has been my constant endeavor to keep the expenditures at all times within the limit, and in this connection it might be pertinent to refer to the fact that it was found absolutely necessary, soon after the opening of school last fall, in order to secure and retain competent help, to raise the salaries of our employes, and this has resulted, as you know, in a \$1,000.00 yearly increase to our pay roll.

To recapitulate the completion of our water system, a passenger and dummy elevator, an isolation building, sidewalks, a new roof and veranda supports, new books for the point library, new pianos and a piano player and new laundry machinery are much needed, all of which are most strongly recommended for your earnest consideration.

GRADUATES.

On account of their value as reference, and also as general information to the public, we take the liberty of again publishing a sketch of the careers of the graduated former pupils of

Wisconsin School for the Blind.

this school, as prepared by former officers, and also of two addresses delivered at the conference of the American Association of Workers of the Blind, held at Boston, in August, 1904, and August, 1907, one being entitled "Graduates of Schools for the Blind and their Needs," by Dr. C. F. Fraser, Superintendent of the School for the Blind, Halifax, Nova Scotia, and the other entitled "Prevention of Unnecessary Blindness and Public Duty," by Dr. F. Parke Lewis, Chairman of New York Commission for the Blind.

The first formal graduating exercises were held in 1885. The total number of graduates to date is seventy-four. They hold honored and respected positions in the communities in which they live. Not all are independent. No one in our complex life is wholly independent. Seeing people must look to one another for support and assistance. Defining independence as that condition of self support in which one earns a salary sufficient for his needs or does for others as much as others do for him, at least 75 per cent of our graduates are self supporting. Their record in this respect will compare favorably with the graduates of the high schools for seeing. Following is given a list of graduates. Those marked with (a star) are totally blind or so nearly blind as to be unable to read ink print. Of these graduates eight are married. The total number of children resulting from these marriages, so far as I am able to learn, is eight and not one of them is blind. Three only are children of a parent congenitally blind.

Wisconsin School for the Blind.

PUPILS NOT GRADUATES.

In the last twenty-four years about three hundred pupils have left school without graduating. Of these over forty are dead, many have left the state and their whereabouts are unknown to us, some have come into possession of property, and others are supported by parents or relatives who are financially well-to-do. There are over eighty of whom officers or teachers in the school have knowledge who are self supporting or nearly so.

Following is a partial list giving names, degree of blindness, residence and trade or business:

Chas. Adams, partial, Greenwood, weaver.
 Mark Albert, partial, Milwaukee, workshop for blind.
 John Amerhine, total, Milwaukee, peddler, supports wife and 4 children.
 Medar Alleyn, partial, Evanston, Ill., cook, married.
 Jers Anderson, total, Stoughton, weaving and other school trades, supports himself and assists parents.
 Jos. Bergs, partial, Milwaukee, workshop for blind.
 George Brooks, total, Linton, N. Dakota, weaving, violinist, singer, partially deaf.
 R. Buckser, total, Milwaukee, tuner.
 Jas. M. Biggs, total, Richland Center, weaver and store keeper.
 Archie Belognia, partial, Oconto, store keeper.
 Frank Bus, total, tuner.
 Albert Bitter, partial, Milwaukee, rat killer.
 Anthony Brunson, partial, Chicago, bicycle repairer.
 Jas. Babcock, partial, Illinois, farm hand.
 Thos. Carney, partial, Galesville, farmer.
 Wm. Crandal, total, Walworth, undertaker, supports wife and 2 children.
 Arthur Covey, total, Oshkosh, peanut dealer.
 John Cunningham, total, Sun Prairie, weaver.
 Grover Carey, partial, Madison, clerk.
 Edward Donahoe, total, San Francisco, Cal., married, two children, school trades.
 Philip Donahoe, total, Big Spring, weaver.
 Oscar Follansbee, partial, River Falls, married, two children.
 Hugo Felck, total, Plymouth, salesman.
 Emil Faulk, total, Oshkosh, weaver.
 Jos. Gockle, total, Milwaukee, editor and publisher.
 Edward Genrich, total, Eau Claire, tuner.
 Walter Goetzinger, total, La Crosse, married, musician.
 Laddie Gorna, total, Two Rivers, tuner.
 Louise Marsden (Goetzinger), partial, married, La Crosse.
 Frank Harmon, total, Elkhorn, farmer.
 Peter Holmgren, total, Harley, weaver and merchant.
 Howard Hall, partial, Poynette.
 Edward Johnson, partial, Kendall, weaver.

Wisconsin School for the Blind.

Bert Johnston, total, Milwaukee, tuner.
 Terrance Knight, partial, Darlington.
 Bernard Knuth, total, Milwaukee, workshop for blind.
 Julius Koepke, total, Whitewater, tuner.
 Levi McCulloch, partial, Janesville, broom maker and canvasser.
 Dennis Murphy, partial, Waupun, farmer.
 Ernst Montgomery, partial, Poplar Grove, weaver.
 Edward McMurphy, partial, Prescott, farmer.
 Wm. Mann, total, Milwaukee, workshop for blind.
 Louis Manz, total, Milwaukee, workshop for blind.
 Gustav Mansky, total, Milwaukee, deceased.
 Ernest Meissner, partial, Janesville, laborer.
 Placid Mougenot, total, weaver.
 Lizzie Nix, partial, Milwaukee, clerk.
 John Nelson, partial, River Falls, printer.
 Nels Nelson, total, Pine Grove, fiddler.
 Wm. Nelson, total, Cushing, farm work.
 John Olson, total, Elroy, farm work.
 Peter Oren, total, Blanchardville, laborer.
 Edward Ouradnik, total, Slovan, weaver.
 Joseph Preston, partial, Janesville, shoe merchant.
 Ulmer Park, partial, Cong. clergyman, Belnwood, Iowa.
 Frank Pratt, partial, Madison, music dealer.
 Alpheus Parseneau, partial, Fall River, farmer.
 Violet Patterson, partial, Milwaukee, teacher.
 Howard Pratt, partial, River Falls, butcher.
 Nels Peterson, total, Racine, weaver, married, two children.
 Emil Reutzen, partial, Milwaukee, deceased.
 Frank Richardson partial, Burnam Woods, weaver.
 Adam Rickert, blind and deaf, Waukesha, peddler.
 Chas. Rcot, total, Milwaukee, tuner.
 Hays Rouse, partial, Bay Settlement, farmer.
 Frank Siegel, partial, Racine, married, tuner and salesman.
 George Stuenfig, partial, Portage, farmer.
 Edward Shattuck, partial, Milton, merchant.
 Henry Schart, partial, Milwaukee, workshop for blind.
 Philip Slack, total, Oklahoma, book merchant, married.
 Jerry Scribner, partial, Denver, tuner.
 Charles Stern, partial, Hintz, weaver.
 Frank Tamplin, total, Janesville, farmer.
 Frank Tummand, total, Dubuque, weaver.
 John Wilson, total, Eastman, musician.
 Hesto Washburn, partial, Delavan, teacher.
 Hirman Woodard, total, Lodi, weaver.

Of women who left school without graduating, twenty with partial vision and four of the totally blind have married and have charge of homes. Two or three are music teachers. Many earn a little money by selling bead work and other articles of their handicraft. The large majority live with relatives and support themselves not by earning salaries but by helping in the work of the household. "Home helpers" is our name for

SCHOOL FOR THE BLIND—COOKING CLASS.

SCHOOL FOR THE BLIND—TYPEWRITING.

Superintendent's Report.

the positions they fill and it is to train blind girls to be a real help and blessing in the homes in which they live that much of the energy of the school is directed.

Of former pupils, two women and five men are in poorhouses. One of these women has money and pays two dollars a week toward her support; the other one makes and sells bead-work which helps in paying her expense. Two of the five men will probably soon be earning a living in the workshop for the blind in Milwaukee, so that four persons—three men and one woman is nearly a fair statement of the number of our former pupils now public charges in the almshouses of the state.

Of former pupils, not graduates, twenty-one women and thirteen men, with partial sight, and four women and ten men with no sight, have married. The marriages have resulted in forty-one children, two with defective vision.

Only four marriages have occurred the parties to which both attended school here, and in not more than one case, if any, was an attachment between the young people formed while attending school.

In concluding this report I desire to acknowledge my deep appreciation of the cordial support and consideration shown me by your Honorable Board at all time. All of which is most respectfully submitted.

HARVEY CLARK,
Superintendent and Steward.

Wisconsin School for the Blind.

GRADUATES OF SCHOOL FOR THE BLIND AND THEIR NEEDS.

DR. C. F. FRASER,

Superintendent School for the Blind, Halifax, N. S.

Address Delivered at the Conference of the American Association of Workers for the Blind, Boston, Mass., August, 1904.

In considering the needs of our graduates a few preliminary remarks as to the training given in schools for the blind may not be out of place.

The officers and teachers in schools for the blind should be enthusiasts in their particular line of work. They should endeavor to impress upon their pupils a strong spirit of self-reliance, and faith in the idea that the world has work for them to do. The spirit of the school should always be optimistic, for while blindness is a handicap, it is not an insuperable obstacle to success. I wish that each instructor of the blind could fully realize the importance of this truth and could learn by experience how best to administer the tonic of encouragement.

The mental, moral and physical training given in many schools for the blind is admirable, but in some schools it fails in that it is not specific and definite. The lad with sight who goes out from the grammar or high school requires an additional training of from one to five years to fit him for the activities of life. If he were dependent upon the education he received in the public schools he would find but few avenues of employment open to him. It is the practical training in the workshop, factory, counting house, office or special school which enables the lad with sight to take his place side by side with his fellow-men as a skilled workman or a trained business or professional man. The boy who is blind must receive the same practical training if he is to succeed in the world. He cannot secure this training after he graduates, hence it is of paramount importance that he receive a special training while he is still an undergraduate. I do not underrate the intellectual training given in the literary departments of our progressive schools, but this education, be it ever so good, will enable very few blind persons to solve the problem of how to win their bread and butter. I believe that each pupil in our schools should receive a specific training in some particular line of work which would enable him as a graduate to support himself, or at least to do something towards his support.

Each pupil requires special study upon the part of superintendent and teachers. The weak places in his character or physique must be strengthened; his manners and habits duly considered; his mental aptitude fully gauged, and his training such as to insure a practical knowledge of at least one occupation which has a commercial value in the world. If he is to be a teacher of music he should know how to teach and what to teach; he should have confidence in his ability to teach children with sight, and should be familiar with the difficulties with which he will have to contend. It should be our aim to make him a thoroughly qualified *instructor* rather than

Graduates of School for the Blind and their Needs.

a player of piano-forte music. I would not lower the standard of excellence in any of the musical departments so far as the individual is concerned, but I believe as a business proposition that piano *playing* should take a second place as compared with piano *teaching*. Better graduate three qualified teachers than one virtuoso. The training of vocal teachers, pianoforte tuners, and *masseurs*, should be equally definite and thorough. Each pupil should also be trained for one or more years in commercial work, so as to familiarize him with ordinary business transactions.

The choice of a locality in which to settle is of the utmost importance to a graduate of a school for the blind. Those who are blind are, as a rule, more successful in communities where they can become well known. Populous cities and sparsely settled country districts offer few opportunities of employment to the graduate of average ability. The choice of a locality should generally be made in the smaller cities, towns and villages. I have known many of our girl graduates succeed admirably in towns and villages who would undoubtedly have failed had their lot been cast in larger cities. I have also known pianoforte tuners and *masseurs* who have found little or no employment in their village homes achieve success in the larger towns. Therefore the prospective graduate, with the help of the superintendent of the school, should give a great deal of consideration to this matter of locality, as upon the choice the future success of the graduate may largely depend. It is a great mistake to allow our graduates to drift to their own homes, where there is little or nothing for them to do. Every effort should be made to induce them to go to work immediately upon leaving the school, as the effect of a year of idleness is demoralizing in the extreme, making the boy or girl less self-reliant and less able to cope with the difficulties with which all are called upon to contend.

A blind person cannot make a successful start in life without money in his pocket. This fact was forcibly brought to my attention during the earlier years of my superintendency, and in order to meet the need I established a modest loan and aid fund of \$1,000. From this fund loans of twenty dollars and upwards have been made to graduates in good standing. Interest is charged at the rate of six per cent. per annum, payable annually. The principal may be repaid in installments of smaller or larger amounts. Since the establishment of the fund in 1882, one hundred and fifty loans have been made, and in many instances repaid with interest within two years. The advantage of such a fund has, year by year, become more apparent to me; and although the individual loans were not large, I believe that many of our graduates would have failed to succeed had it not been possible to place within their reach the necessary financial assistance.

We are all well aware that it is more or less difficult for young and inexperienced blind persons to establish themselves in communities where they are strangers. The man with sight will in a few weeks establish friendly relations with those about him. A glance of the eye, a nod of the head, and certain acts of courtesy win for him the recognition of his fellows and speedily break down the barriers of strangeness and reserve. The disadvantages of the blind in this particular can be largely overcome by the superintendent of the school taking measures to have his graduates properly introduced to the leading people of the towns and villages in which they are to settle. This he can do by personal visitations and by letters of introduction from himself and interested friends. I need

Wisconsin School for the Blind.

not go more fully into this matter of proper introduction, as I believe its importance will be at once realized. It may be of interest to recount the measures that are taken to meet the needs of the graduates of our tuning department in the school for the blind at Halifax: It is decided that F. B. is to locate in M—, I at once set about to secure the addresses of all persons in M— who have pianos, and immediately send out a circular letter recommending the tuner and guaranteeing his ability to perform satisfactory work. The tuner goes to M— and calls upon those to whom letters have been sent. When he secures a piano and tunes it to the satisfaction of its owner, he requests that a brief testimonial be entered in a small book which he carries for the purpose. After he has obtained several of these local testimonials he finds no great difficulty in securing regular employment. New testimonials are added as opportunity offers. A similar method can be used to advantage by teachers of vocal or instrumental music.

Graduates of schools for the blind should make a point of joining some local society, organization, or brotherhood, and thus come into friendly contact with the men and women of the locality in which they reside. I always strongly recommend my graduates to identify themselves with the communities in which they live, and I know of no better way for them to do so than by becoming members of some philanthropic or mutual benefit society. The friendly association with workers in the same cause is socially and materially advantageous to them. It broadens their view of life and arouses upon the part of their fellow-members a keen interest in their success.

To sum up: Our graduates need specific training; they need to select with care the locality in which to reside; they need to have money in their pockets; they need to be properly introduced, and they need to identify themselves with local organizations. These needs being met, we should have no fear as to their success, provided their industry and the quality of their work merit the support and encouragement of their fellow-citizens.

PREVENTION OF UNNECESSARY BLINDNESS A PUBLIC DUTY.

DR. F. PARK LEWIS,

Chairman New York Commission for the Blind.

Address Delivered at the Conference of the American Association of Workers for the Blind, Boston, Mass., August, 1907.

It is not necessary to tell a blind man what it is to be blind. We may say what we will about the marvellous achievements of those without sight; we may point with amazement and pride at mathematical prodigies like Professor Carll, or at a musical genius who has been phenomenally successful like Edward Baxter Perry, or at a sightless typist, or switchboard operator, or masseur or business man or woman; but the fact remains that success has been won in each instance in spite of a heavy handicap, and the blind are cheery and optimistic because they are brave. So hard a thing it is to be denied a glimpse of the beauties of this world, to

Prevention of Unnecessary Blindness a Public Duty.

be shut out from an even competition with one's fellows, that it would seem impossible that in a civilized country any human being should be needlessly permitted to lose his sight. Yet there is no doubt whatever that from thirty to forty per cent. of those who are blind need never have become so had proper measures been taken at the right time to prevent the affliction. With much of the unnecessary blindness we may not here concern ourselves; but when young infants who come into the world normal in every particular have their eyes destroyed as the result of an avoidable infection, the failure to use the simple measures that will prevent it and to warn those who should know what to do but fail to do it become a crime, for which you and I are responsible. Ophthalmia neonatorum, or inflammation of the eyes of newborn babies, is one of the commonest and at the same time one of the most dangerous maladies of the eyes to which the child is subject. It is not confined to the tenement-house district; it may occur in any class of society. It is due to the introduction in the child's eyes at or shortly after birth of germ-infected secretion from the mother. If the smallest portion of this infecting material is allowed to get inside the infant's eyelids it rapidly develops a most violent inflammation, which may be followed by ulceration and rupture of the eyeball. When finally its intensity is expended and the suppuration has ceased, the clear, shining eyes have been replaced by ugly, staring, protruding globes from which the sight has forever gone. If, however, immediately after the child is born the lids be wiped free from all secretion, a pledget of absorbent cotton or a bit of soft, clean linen cloth being employed for this purpose, and the lids gently opened and washed free from any extraneous matter that may have got into them, the eyes may be saved.

One can never be sure, however, that all of the microscopic forms on which infection depends have been removed by simple washing; and twenty-four years ago Professor Crede, of Leipsic, made a great discovery, for which some day the whole world will unite in doing honor to his memory. At that time he made the announcement that, by allowing a small portion of a two per cent. solution of nitrate of silver to drop from the end of a tiny glass rod upon the eyeball of a new-born child, the microbes of infection would be destroyed and the eye itself uninjured. In his enormous clinic the number of cases of ophthalmia was reduced by this procedure from ten per cent. of the whole number of births to two-tenths of one per cent.; and some years later, in a series of over 1,100 births, one only was slightly infected, still further reducing the percentage to a quarter of one per cent., and increasing thereby the possibility of the child escaping this dangerous infection by fifty times.

It will be seen, therefore, that if this great discovery of Crede's were uniformly employed, the chief cause of blindness throughout the civilized world would be abolished.

This is a condition thoroughly understood and guarded against by all trained obstetricians. In almost every modern hospital, as in every suspected case in the practice of every modern physician, prophylaxis is a routine procedure, and a blind baby in consequence is so rare under such careful treatment as to be remarkable. But among the poor, ignorance is still rife, and vast numbers of mothers receive the ministrations of half-trained or ignorant midwives and, alas! sometimes of careless doctors. Through lack of knowledge as to the proper though simple procedure required, eyes are infected

Wisconsin School for the Blind.

rather than protected. The admirable Howe law, which already obtains in sixteen states, requiring midwives to report the existence of ophthalmia neonatorum to the health authorities, is rarely enforced, or if it is there is no one upon whom its care and treatment necessarily devolve. This means delay, and delay, so far as the eyes are concerned, is often another way of spelling destruction.

I have said that these cases usually occur among the poor. A helpless child, therefore, soon becomes too great a burden for the parents to carry and it is shifted to the community. Many, fortunately, are got into the schools for the blind. That efficient prophylaxis is not generally employed the records of all institutions where young blind people are gathered abundantly demonstrate. The average number of blind from this disease entering the New York State School during the past five years is twenty-six per cent of the whole number admitted, while at Overbrook, Pa., the main cause of blindness is ophthalmia neonatorum. Of 536 pupils admitted to this school between 1890 and 1906, inclusive (sixteen years), twenty-nine per cent of the whole were victims of ophthalmia neonatorum; 155 babies had had their eyes destroyed and their light extinguished forever because of the carelessness or neglect of some one who should have known, but did not, and should have cared enough, but did not, to put one drop of the simple but necessary prophylactic in the eyes of the child in time to save him from such a fate. About one-quarter of the children in all of the schools for the blind have lost their sight from this cause. There are in all in the United States fifty of these schools. The cost of supporting them reaches a sum annually approximating two millions of dollars. Were it not for the needless blindness resulting from this preventable disease, one-fifth to one-quarter of these schools would not be required at all, or they might be filled by other blind children who are not now being educated. The annual saving, then, to the nation would amount to hundreds of thousands of dollars and many times that sum would be added to the economic value of the commonwealth in turning an expense into a revenue by making one who may be a dependent into an effective and productive citizen.

In a home in Brooklyn, maintained through the broad and generous charity of the women connected with the Sunshine Society, are seventeen blind children, mostly taken from Randall's Island—the children of paupers. An examination was made by the New York state ophthalmologist—an official connected with the State Health Department—of sixteen of these children; one probably was absent. Of these, twelve, possibly thirteen, were hopelessly blind as a result of preventable and at one time curable conditions. This is a noble and worthy charity, and the kind and helpful sympathy given these children is brightening otherwise dark and desolate lives; but if the money and effort necessarily employed in caring for these blind children for one year had been devoted to propaganda for the prevention of blindness, these and countless others had never lost their sight.

In the State of Massachusetts among 3,806 blind registered by your commission on the first of the present year, 661, more than twenty per cent. of the whole, had become blind before their fifth year. If we exclude ulcerative condition due to bad hygiene and insufficient nourishment, which ought to be controllable, and congenital blindness, which constitutes a comparatively small proportion of the whole, we are safe in assuming that one-half of this number, or ten per cent. of the whole, have in enlightened New Eng-

Prevention or Unnecessary Blindness a Public Duty.

land given their eyes as a sacrifice to this Moloch of ignorance and neglect.

Before any adequate understanding can be obtained as to the measures to be taken for the relief of an intolerable condition such as I have pictured, it is necessary to know exactly the circumstances that make its continued existence possible.

It is unthinkable that any human being can understand and appreciate the frightful danger with which the innocent infant is menaced and yet deliberately withhold his hand from the very easy assistance needed.

We may safely assume that in no instance is it due to the unwillingness of the accoucheur to safeguard the child's eyes; but the world grows with great rapidity. More than one hundred thousand children were born in the city of New York during the past year. Vast numbers of these came from tenement houses, from back alleyways and the slums, from homes, if they may be called such, where cleanliness and decent living are almost impossible, and where sanitation in the modern acceptance of the word is a rite unknown.

To many of these even our language is strange. They are the Russian and the Polish Jews, Sardinians, Croatians, and others whom our college settlement workers and district physicians can better name.

These people are ministered to in their confinements by women of their own nationality, and usually of their own social status. Last year the demand for a midwife's services were voiced by 43,834 mothers in Greater New York. Not a few of them have had good training, but many of them are unclean and ignorant to the last degree. Occasionally, of course, in this class a physician is employed, but the hurry of an active practice often makes him forgetful of unusual precautions. He is not in the habit of caring for diseases of the eye. These go to the dispensary or to the specialist. Infections of the eyes do not, indeed, often occur in an individual practice. They may be expected only in from one in fifty to one in two hundred cases, so that a busy doctor may not see one in years. After the baby is a week or ten days old, as the mother is convalescing, his attention is called to the swollen, suppurating eyes of the child. Then he remembers that he did not happen to have the silver drops in his bag and none were used. Dr. Carrigues reports that during his service in New York maternity hospital, in 1882 to 1884, Crede's practice was followed in 351 infants and not one was affected with ophthalmia. One other case was delivered in the absence of the house surgeon and the silver was neglected. This child had the disease and lost both eyes in spite of special treatment. A Buffalo physician makes the use of this prophylactic a routine. He omitted in two cases. In both infection followed.

While with individual accoucheurs the infections are few, the aggregate is large. In the city of Buffalo last year, with 8,500 births, there were 102 cases of ophthalmia in the practice of the physicians and midwives. The number is far greater in maternity and other hospitals, from which reports were not obtained. There is no doubt whatever that at least ten times as many infections occurred as were necessary. In the country districts it is much the same. The attendant among the poor is often a woman-relative who does the best she can, or the doctor who has come many miles and who is not expected to see either mother or child again unless serious illness supervenes.

Wisconsin School for the Blind.

The reasons, then, why protection is not always afforded to the child are: First, that the disease occurs so infrequently that it is not anticipated. Second, midwives and many doctors are not sufficiently well informed as to its dangers and the most effective method of preventing infection. Third, neither the midwife nor the doctor is likely to have the proper silver salt in fresh solution at hand. Imagine one of these women, who can scarcely read or write, copying a Latin prescription for the purpose of securing a drug in which exact dosage is imperative; and, fourth, the accoucheur, whether midwife or doctor, does not always have accurate knowledge as to the way it should be used.

WHAT, THEN, SHOULD BE DONE?

It is essential if this plague, which is ubiquitous, be got under control that the public be enlightened concerning it. There must be inaugurated a campaign of education. Every prospective mother throughout the length and breadth of the land should know that unless proper precautions are taken, her baby may be blind for life. Attempts at popular education on these lines have been made many times and in many lands, but they have been sporadic and indefinite. They lacked plan and continuity. Under the inspiration of Dr. Roth, of London, England, many years ago, a prize was offered for the best essay on the prevention of blindness, and it secured an admirable popular monograph from the pen of Professor Fuchs, of Vienna. Unfortunately it is no longer in circulation. Leaflets describing ophthalmia neonatorum, giving its cause, the method of prevention, and necessity for urgent treatment by a competent physician, have been issued in many languages—English, German, Polish, French, Italian and Hebrew. These have been distributed to mothers and midwives by the Society for the Blind in England and the Valentin Haüy Association in Paris, as well as by our own Massachusetts and the New York Associations. The value of these is beyond measure. They, however, reach isolated spots, when the whole field must be covered.

The plan to which the American Medical Association has given its approval provides for a perfectly organized movement covering the whole United States from Maine to Alaska, and from Canada to the Gulf. It includes the appointment of committees from each state medical society, and through them from every county society in America, these to follow a definite plan of campaign which shall be given with the authority and approval of the national ophthalmological and obstetrical associations. In fulfillment of this, the subject will be presented during the coming month at a meeting to be held in Detroit, of the American Society of Obstetricians and Gynecologists, and a little later before the Academy of Ophthalmology and Oto-Laryngology, at a meeting to be held in Louisville, Ky. This will provide, first, for the enactment of laws in each state and federal territory placing the supervisory control and licensure of midwives in the boards of health, requiring that they may be examined and registered in each county and that they may be required to report each case of ophthalmia neonatorum occurring in their practice under penalty—if found guilty of neglect of the method of prophylaxis required by the health authorities—of forfeiture of their license and fine; second, for the distribution by health boards of circulars of advice to midwives and mothers, giving instruction as to the dangers, methods of infection, and

Prevention or Unnecessary Blindness a Public Duty.

prophylaxis of this disease; third, the preparation and distribution by health boards of ampoules or tubes containing the chosen prophylactic, with a simple description of its necessity and method of application. These may be made at almost infinitesimal cost; they insure a safe and pure solution, and if hermetically sealed in light-proof receptacles, will keep indefinitely without chemical change; fourth, to obtain at stated periods from midwives and all physicians engaged in the practice of obstetrics, a report of the number of cases of ophthalmia neonatorum which have occurred in their practice during this time, together with a statement as to whether or not a prophylactic was used in each case, with the condition of the eyes at the close of treatment. In cases of blindness a full explanation should be placed on record. The statistics thus easily and inexpensively obtained would be of great value, while the accoucheur would be constantly reminded of the necessity of vigilance in prophylaxis and treatment. The midwife, on the other hand, must be held to strict accountability for every case encountered, and failure to use the measures freely provided, should the child's eyes suffer, must be followed by a penalty which should include the forfeiture of the license under which she is permitted to ply her trade. From the medical standpoint, the success of this plan is assured. The president-elect of the American Medical Association, your distinguished citizen, Dr. Burrell, has signified his hearty approval of the efforts that are being made to control this disease, while eminent obstetricians, ophthalmologists and sanitarians, all agree with Professor Hess, of Germany, who was but recently the guest of the Association, that the time has come when the plague can and must be stamped out. But no great movement ever succeeded, no law placed upon our statutes has ever been enforced, unless it is backed by an intelligent public sentiment. This is not a new subject to the medical profession. For more than a quarter of a century doctors have been meeting in conclave and telling each other that which they already knew perfectly well, that blindness resulting from this disease was unnecessary and should be prevented; but helpful as has been these discussions they have failed to reach the audience with whom such teaching was most needed, and disaster continued to follow disaster. The efforts which the physicians are making must be supplemented by the state and by the public; by the state for economic and humanitarian reasons. For every dollar used for prevention, ten thousand times as much is saved in cutting off the cost of education and maintenance of one who may become a dependent, and it is moreover a legal right which the infant citizen may properly demand through his guardians and protectors that he be not robbed, through ignorance and neglect while yet helpless and unable to protect himself, of that which is more precious than his dearest earthly possession—the ability to see. The duty of saving the child from this calamity is one devolving not only on the state, it rests upon every right minded individual to whom a knowledge of his danger comes. We cannot be censured for taking no action concerning conditions about which we have no knowledge; but when I demonstrate to you that there will be born in the State of Massachusetts and in the city of Boston during the coming year hundreds of innocent, well-formed babies whose eyes may be injured or destroyed because right steps are not taken to protect them, then upon each one of us who knows and makes no effort to prevent this affliction will rest the responsibility for the result. It should be a self-im-

Wisconsin School for the Blind.

posed task on every society for the prevention of cruelty to children, upon every children's aid society, upon every charity organization society, upon every legislator, upon every citizen, to promulgate a knowledge of the dangers which menace the babes of the land; and if they and we unite our efforts, for no movement should be attempted except with the authority and co-operation of the organized medical profession, this pathologic anachronism of a controllable and preventable infection which continues to work havoc and disaster in spite of twentieth century knowledge and methods will be robbed of its virulence, and comfort and happiness and prosperity shall be assured for a multitude of children yet unborn.

List of supplies the children should have on entrance to the school.

For Boys.

2 suits for week-day wear
 1 suit for Sunday wear
 3 colored and 1 light day shirts
 2 night shirts
 6 prs. of socks or stockings
 1 hat and 1 cap
 2 suits of light underwear
 2 suits of heavy underwear
 3 pairs shoes
 1 pair mittens or gloves
 1 comb and brush and toothbrush
 Handkerchiefs and collars
 4 towels

For Girls.

3 dresses for week-day wear
 1 dress for Sunday wear
 2 white underskirts
 3 colored underskirts
 3 night dresses or gowns
 6 pairs of stockings
 1 warm jacket and hat
 3 suits of light underwear
 3 suits of heavy underwear
 3 pairs of shoes and overshoes.
 1 pair of mittens or gloves
 1 comb and brush and toothbrush
 Handkerchiefs
 4 towels

Small boys should have more underwear than larger ones. Their pants, both woolen and cotton, should be of washable material for every day wear. They should have six waists (instead of shirts) and an extra pair of trousers also rubbers or overshoes. Small girls should be provided with aprons.

3. Subsistence.....	9,448 52	9,601 79
4. Ordinary repairs.....	657 05	1,009 05
5. Office, domestic and outdoor expenses....	6,483 73	4,893 79
Total.....	\$32,695 38	\$32,394 21
Extraordinary expenses:		
1. New buildings, lands, etc.....	\$4,172 39	\$12,827 61
2. Permanent improvements to existing buildings.....	1,378 16	3,346 79
Total.....	\$38,245 93	\$48,568 61

Notes on current expenses:

- Salaries and wages should include salaries of trustees directors, if any.
- Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
- Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with 'permanent improvements.
- This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry, supplies, medicines, engineer's supplies, postage, freight, library, etc.

J. S. ROESELER.....	SCHOOL PRINCIPAL
J. B. NOBLE.....	PHYSICIAN

SUPERINTENDENT'S REPORT.

To the State Board of Control:

I hereby submit the report of the Wisconsin Industrial School for boys for the biennial period ending June 30, 1908.

I desire to express my appreciation of the uniform courtesy and consideration I have received from the board, and of my pleasant relations with its individual members.

Beginning with the financial panic and the depression in business following it, there has been a very marked increase in the number of boys committed to the school. On the last day covered by this report the number enrolled was 356, the largest enrollment at the close of any year since 1890. A new family was organized on that day, housed in that part of the double cottage known as No. 9. In spite of this relief, the institution is still much overcrowded.

By Chapter 630, Laws of Wisconsin, 1907, Section 4966 of the Statutes was amended so as to confer upon justices of the peace authority to commit boys to the school upon conviction of criminal offenses. Fortunately, it does not confer upon justices of the peace authority to commit incorrigible boys. Unfortunately, it raises the age limit for the commitment of criminals to eighteen, and fixes no limit whatever as to how young they may be at commitment. If vagrants are criminals, it is difficult to determine whether their commitments are to be governed by paragraph 1 or paragraph 2 of section 4966.

The juvenile court of Milwaukee county provides for a medical examination of every boy it commits to this school. A physician's certificate goes with every commitment paper, certifying that the boy committed is not suffering from any contagious disease. Such a certificate should be required by law of every court sending boys here. This school is not a hospital. I have no disposition to shirk the proper care of our own sick, but I

Wisconsin Industrial School for Boys.

contend that the school should be protected by a stringent law from boys suffering from smallpox, scarlet fever, diphtheria and other contagious diseases. Chronic invalids and physical weaklings requiring hospital care should not be sent here.

In the case of every boy committed to this institution, there should be a careful medical examination under the direction of the court committing the boy. The boy should be examined again on his arrival here. In this way, the boys would be protected against contagion, and the institution against the burden of giving hospital care to chronic invalids.

From another point of view, *for the sake of the boy*, the law should hold the court responsible, for a thorough examination into his physical condition before he is sent here.

Some time ago, a little fellow was received so near the point of collapse that his life was barely saved by prompt medical treatment and good nursing. He was sick when taken to court for trial. Apparently, no one noticed the condition of the little sufferer. He was taken on his journey of several hundred miles. He did not get well on the way. His condition was critical when he got here.

Another boy, a scarlet fever patient, was taken from his sick room, just before desquamation had begun. Accidently or providentially, it was discovered in a day or two, that the boy's hands were beginning to peel. He was promptly isolated and cared for. The other boys of the school escaped contagion and he escaped any serious consequences from the hardships of a long journey. Such cases of carelessness are not uncommon. They ought to be made impossible in an enlightened state like Wisconsin.

This is not the proper place for epileptic or feeble-minded boys. "Where shall such boys go?" is a question the state is answering as rapidly as buildings can be erected at the home for feeble-minded, at Chippewa Falls. The fact that the home at Chippewa Falls is crowded does not impose the duty of caring for these unfortunates upon this school. This school is maintained by the state for a very different purpose.

Boys over sixteen years of age with bad criminal records, convicted of rape, burglary, forgery, horse stealing, or other

Superintendent's Report.

serious offenses should not as rule be sent here. This is not the place for mature, hardened felons. There comes a time in the career of every such boy when society must consider not solely what is best for the boy, but also, and more and more predominantly, what is best for the protection of society against the boy? What is best for the younger, more innocent, and more hopeful boys of this school? Undeniably, to keep the mature, hardened criminals out.

Neglected and dependent children should not be sent here. The state maintains an institution at Sparta for them. They should not be compelled to associate with "vagrants, incorrigibles and criminals."

The more strictly the various penal and charitable institutions are made to attend to their respective special functions the more economically and efficiently they will serve the state.

The health of the boys has been excellent, though for the first time in six years, death has visited the school. Otto Staff was received January 4, 1908. In April, his strength began to decline rapidly and he found to be seriously ill with consumption. He was sent to his home in Marinette April 27th. He died there of consumption May 7.

Henry Stransky, after an illness of about twenty days, died of cerebro-spinal-meningitis June 26, 1908.

I send enclosed herewith the report of the school physician.

The school has improved steadily during the biennial period. The average time of detention is about two years. Boys with clean conduct records are released on parole after about eighteen months. Boys under fourteen are held, when practicable, until they finish the fourth grade. Most of the boys are very backward in their studies when they are received. They rarely get any more schooling after they are released.

Under these conditions, it is obviously wise to emphasize the great fundamental studies of a good common school education—the practical arts and sciences by means of which the boys are enabled to earn their own bread and butter. The course ends with the eighth grade.

Besides the common school branches, the boys are trained in

Wisconsin Industrial School for Boys.

vocal and instrumental music. There is a good manual training department.

I hand in the report of the principal.

Besides the training of the school proper, the boys are trained in all the operations of our large farm. They make all their own clothes and shoes. They do the work of our large laundry. They do the sweeping, dusting, scrubbing, dishwashing, waiting on table, and all the other operations of housekeeping. They haul all the coal and other supplies. They make all our bread, and learn something of cooking. They do the firing for our power plant, and assist in our plumbing and electric-wiring, blacksmithing, painting and carpentry. In short, it is the purpose of the institution to give every boy the fundamentals of a good common school education and the means of earning his livelihood in some trade or calling.

Many improvements have been made since June 30, 1906. A tract of land adjoining the school lands on the east, containing about twenty-six acres, has been purchased. The acquisition is extremely important. It insures room for an athletic field and for additional buildings as they may be needed, so that the younger boys may be segregated more perfectly from the older ones. The growth of the city in this direction will not bring private houses too close to the school. Garden plots for the small boys are available close to the school buildings. In every way, the institution has room to grow.

New roofs have been put on the piggery, the large cow barn and the tool shed. The boys' dining room and the assembly room have been handsomely decorated. The gutters on the roof of the boys' dining room have been renewed, so that the rains no longer leak through to injure and blacken the walls. Hardwood floors have been laid in all the cottages, lockers for the clothes and shoes of the boys have been provided, and many other internal improvements made for their convenience, comfort and health.

New iron bedsteads in all the cottages have taken the place of the old wooden ones.

A good deal of fencing has been done.

A fine new dormitory for the men has been built at an ex-

Superintendent's Report.

pense of less than \$12,000.00. The concrete blocks in the basement and first story were made on the ground by the boys. The plumbing and electric wiring were put in by our own men and the boys working under them.

The new building takes the place of the old dormitory—the oldest building on the ground—which had become so delapidated as to be dangerous.

There is still an unexpended balance of the special appropriation made by the legislature of 1907 for a new coal shed, a new cow barn and a printing outfit. All of these improvements are urgently needed.

On account of the great increase in our population, I recommend that the legislature be asked to restore the general biennial appropriation for the support of this institution to its original figures, \$114,000.00. The cutting down of the appropriation to \$110,000.00 by the legislature of 1903 has crippled the institution ever since.

We need at once or in the near future:

1. Two new cottages for small boys to accommodate fifty boys each.
2. A new schoolhouse for the small boys.
3. A good gymnasium well-equipped.
4. A creamery.
5. New front walks.
6. The front driveway should be macadamized or paved with brick.
7. A system of telephones between our principal buildings.
8. A system of ventilation for the whole institution.
9. Playground outfits.
10. The Winchell farm of 114 acres adjoining our land on the west should be added to our farm.

In my judgment, the legislature should make provision not only for the immediate needs of this school, but also for the needs of the future. This school will grow with the growth of the state. A wise administration will foresee its growth and make provision for it.

A. J. HUTTON,
Superintendent.

Waukesha, June 30, 1908.

Wisconsin Industrial School for Boys.

PRINCIPAL'S REPORT.

PROF. A. J. HUTTON, Supt.,
Wisconsin Industrial School for Boys,
Waukesha, Wis.

I have the honor to submit to you herewith the biennial report of the department of instruction for the period ending June 30, 1908.

As the work in this department has been carried on largely along the lines set forth in my last report, I will refrain from covering the whole ground again, and will instead call attention only to marked changes or to much needed improvements.

INCREASE IN SCHOOL ATTENDANCE.

There are nearly 100 boys more in the grades than there were five years ago. This increase is due partly to an increase in the commitments and partly to a reduction in the number of those who are employed all the time at some form of manual labor. Of the latter class, there are at present only sixteen.

This increase in school attendance necessitates an increase in the teaching force. Most of the grades are over-crowded, there being an average of thirty-six pupils in eight grades, and an average of thirty-two in all the grades. For the most effective work, the average should not be above twenty-five.

We need a specially trained primary teacher. Primary work has peculiar difficulties in our school. All our boys have really passed the primary age. Many speak a foreign tongue, and know very little English. They find great difficulty in doing at nine or twelve years of age what they might have done with ease at five or six. We need a teacher of skill and power to keep these backward boys from staying too long in the first grade. Special skill in the teaching of these neglected boys in

Principal's Report.

our primary grades will go far towards relieving the continued congested condition in these grades, and will awaken in them a desire to learn.

SPECIAL IMPROVEMENTS.

In order to make the reading work the central and most important work in the school, we are now devoting the first two hours of the morning school and the first two hours of the afternoon school in each grade to reading and to oral and written language work growing out of the reading lesson. Thus only one book, the reader, is now used in teaching the three branches—reading, language and spelling. The Baker and Carpenter Language Reader Series, which we are now using, is admirably adapted to this plan. Under this method, minimum attention is given to the technicalities of language, and maximum attention to its usage or practical application. To supplement the reading work of the basal readers and to furnish valuable information along the lines of the other studies in the school course, the grades have access to sets of geographical, biographical, historical and literary readers.

Much attention is given to the memorizing of choice extracts of prose and poetry from the reader. By constant repetition, these gems in time become as familiar and as firmly fixed as the multiplication table, the Lord's Prayer and the alphabet.

A MARKED CHANGE IN SYSTEM OF SCHOOL RECORDS.

During the past biennial period, we have adopted the loose leaf system of keeping the class standings and attendance record. Each teacher has now a separate interchangeable post binder for this purpose. When a pupil is transferred or promoted, his leaf is taken out and passed over to the next teacher. If the boy is paroled, his leaf is filed in the principal's office.

IMPROVEMENTS IN THE LIBRARY.

During the past biennial period, we have increased our library by over 600 volumes, so that we now have 1800 library books and 3500 text-books, besides a large number of valuable

Wisconsin Industrial School for Boys.

official documents and pamphlets. In order to make room for this addition of books, we have had an additional large library case placed in the library, so that we can now conveniently place twice as many books as we could five years ago.

These books should be catalogued by a library expert, so that their contents might be made more accessible, and they may prove more useful in making the school work more effective. Provision should be made for caring for them and repairing them, and every effort made to induce the boys to use them more freely and with greater profit.

POOR CONDITION OF BLACKBOARDS.

The boards are in very poor condition. In many patches, they need re-plastering before they are re-slatted. They have been fixed over a number of times and enough has been expended on them to have bought solid slating several times over. In a school like ours, which is in session every day of the year except Sundays, this constant replastering, repainting and re-slating is one of the greatest hindrances to our school work, since the grades are always disturbed thereby, and, even after the repair, the boards in each grade cannot be used for several weeks. It appears to me that since nearly every little country school today has solid slate blackboards, the state of Wisconsin could also afford it for its wards in this school.

NEW DESKS.

To accommodate properly the increased numbers in the school, it will become necessary to purchase from thirty-five to forty new desks for seating the room that has heretofore been used for grade singing, and use this room as an additional class room.

SLOYD AND MANUAL TRAINING.

Our quarters for the sloyd work are too small and crowded for doing the best work with so large a number of small boys. To do justice to these small boys, we ought to have at least two hours of sloyd work in the forenoon and two hours of sloyd work in the afternoon throughout the year.

Principal's Report.

Under the cramped condition and other unfavorable circumstances, this department has accomplished results far beyond reasonable expectations.

THE MANUAL TRAINING.

This department has had too much general repair work to do justice to the boys. For much of the time, repair work has been primary, and manual training work only incidental. I hope for the good of the school, that it will become possible to make manual training primary, and repair work incidental, at all times. I would suggest that the last week in each month might be given to repair work, and the remaining weeks to manual training in its full sense.

The manual training is one of the most helpful means in the redeeming of neglected boys. To prove most effective, it must be pursued systematically without too much breakup or interruption. Some practice in repair work is useful, as it relates the work to practical daily life. If this department could be relieved of some of the repair work, it will be in better shape than it has ever been before. It has even under these hindrances accomplished wonders.

THE VOCAL MUSIC.

This department has outstripped even its former enviable record. It is continually increasing in effectiveness.

IN CONCLUSION.

I hope that the much needed improvements I have suggested may come in the near future by prompt co-operation of superintendent and board.

With the wish to render the best service possible to the state, I most respectfully submit this report.

JOHN S. ROESELER,
Principal.

Wisconsin Industrial School for Boys.

PHYSICIAN'S REPORT.

A. J. Hutton, Supt. Wis. Industrial School for Boys. I herewith submit my report as physician for the past two years.

During that time the boys of the institution have enjoyed uniformly good health. There has been only one death during that period, and that from Cerebro Spinal Meningitis. There was an outbreak of small-pox which lasted about two months. All of the cases were very mild, some of them being hardly recognizable. All of the boys are vaccinated on their arrival unless they show scars of recent vaccination. To this fact I attribute the mildness of the epidemic. Two of the employes had the disease in a more severe form, due to the fact that they had not been vaccinated. I would suggest that a rule be made requiring all employes to be vaccinated, who are not properly protected by recent vaccination. There also was a boy admitted to the institution in the desquamation stage of scarlet-fever, but fortunately it was detected in time and isolated, so it did not infect the school. At another time we received a boy from the extreme northern part of the state suffering from a very severe attack of follicular tonsilitis. He had traveled all night in a day-coach, and upon arrival was very sick. It was nearly two weeks before he was able to be up and around. These unfortunate affairs could have been avoided if they had had a medical examination by order of court before they were sent here. This is done by the Juvenile Court of Milwaukee. I would suggest that a rule be made requiring all courts who send boys to this institution to furnish him a certificate of health.

I want to thank you for the support you have given me in my part of the work in caring for these boys. There has been nothing that I have needed in that work, but what has been promptly and cheerfully furnished.

Wishing you the greatest success in this good work, I remain,

Yours most sincerely,

J. B. NOBLE, M. D.

STATISTICAL FORM, STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of Charities and Corrections, adopted May 15, 1906.

Name of institution, Wisconsin Industrial School for Boys.

Population.	1907.	1908.
Number of inmates at beginning of year.....	305	310
Number received during the year.....	192	260
Number discharged, paroled or died during the year.....	187	214
Number at end of year.....	310	356
Daily average attendanc, i. e., number of inmates actually present during the year.....	310	328
Average number of officers and employes during the year.....	52	52

EXPENDITURES.

Ending June 30	1907.	1908.
Current expenses:		
1. Salaries and wages.....	\$26,775 01	\$29,804 11
2. Clothing.....	3,751 60	4,497 55
3. Subsistence.....	19,160 08	19,719 04
4. Ordinary repairs.....	6,434 60	2,675 83
5. Office, domestic and out door expenses.....	14,002 97	9,021 14
Total.....	\$70,124 26	\$65,717 67
Extraordinary expenses:		
1. New buildings, lands, etc.....	\$9,400 00	\$14,748 41
2. Permanent improvements to existing buildings.....	7,215 77	7,235 88
Total.....	\$86,740 03	\$87,701 96

Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
 - Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
 - Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
 - This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry, supplies, medicines, engineer's supplies, postage, freight, library, etc.
- Superintendent, A. J. Hutton.

WARDEN'S REPORT.

WAUPUN, WISCONSIN, July 1st, 1908.

To The Honorable State Board of Control:

I respectfully submit a report of the operations of the Wisconsin State Prison for the biennial period ending June 30, 1908. The revenues of the institution for the period have been very satisfactory. The cash receipts from convict labor show a material increase over former years with no increase in the number of men employed at productive labor. The increase in receipts from this source have been brought about by the new contract for the employment of prisoners, made at the expiration of the piece price contract, in the month of January, 1907. About one hundred men had been employed at an industry conducted on the piece—price system the receipts from which was a little less than \$1,000.00 per month. We now receive sixty-five cents per day for all convicts working on contract labor. The average number employed the past year on contract was 405. The receipts from contract labor for the past six years have been as follows:

Year ending June 30, 1903.....	\$47,694 36
Year ending June 30, 1904.....	60,317 34
Year ending June 30, 1905.....	71,137 99
Year ending June 30, 1906.....	74,727 58
Year ending June 30, 1907.....	76,497 39
Year ending June 30, 1908.....	80,392 27

The past few years have been extremely busy ones. Extensive improvements have been under way, buildings re-modeled and needed additions constructed. The administration or center building has been entirely re-constructed and re-fitted. Much has been added to the interior appearance of this building and the sanitary conditions have been made the best possible. The changes in this building have been as follows: First floor: The old guards' room, locker room and officers' dining room occupy-

Wisconsin State Prison.

ing the west half of this floor, have been merged into an attractive room, 40x70, for the use of guards and accommodation of visitors. The floor is of white tile with marble base. The ceiling and walls are tinted in sage green adding a bright and cheery effect. The room is furnished with twenty-four massive arm chairs and two large mahogany library tables. The clerk's and warden's offices have been renovated and repainted in keeping with the other improvements on this floor.

Secnd floor: The second floor of the building has been converted entirely into rooms for officers. Ten large, well lighted sleeping rooms occupy the east and west portions of this floor. The recreation room, in the center is 32 feet square and consists of billiard room, reading and writing rooms. The furniture is of mahogany finish and the color scheme in harmony with that of the first floor. The toilet and bath rooms, on this floor, are very complete, consisting of three showers, bath tub, four lavatories and several closets.

Third floor: The chapel occupies this entire floor. The auditorium which is eighty feet and seventy feet deep is equipped with 698 wood veneer theater chairs of comfortable design. Across the rear of the hall is a balcony 75 feet deep, capable of seating two hundred and fifty persons. The floors are inclined at a pitch which insures an uninterrupted view from every seat. The ceiling is finished in delicate cream color, the walls in orange yellow and the woodwork in white. This with the rich red coloring of the seats and floor make a pleasing color arrangement. The total cost of the above described improvements, not including convict labor, was \$31,065.21.

The new cell room, mentioned in my report of two years ago, is rapidly nearing completion. Special efforts will be made to have this much needed building entirely finished so that it can be occupied early next fall. There has been expended on this account to date, exclusive of convict labor, the sum of \$58,417.80.

LAND PURCHASE.

An appropriation was made by the legislature of 1907, for the purchase of additional land. The sum of \$15,036.25 has been expended for this purpose. Two tracts comprising 165

Warden's Report.

acres were purchased adjoining the prison farm. We now have a farm of 312 acres which can be made to add considerably to the revenues of the institution.

ADDITION TO WOMAN'S PRISON.

The legislature of 1907 made available, funds appropriated several years ago for industrial purposes, for the building of an addition to the female prison and extending the prison walls. On account of the many other improvements under way being done by convict labor it was decided to have this building constructed by outside labor. Accordingly plans and specifications were prepared, bids received and considered and the contract awarded to William Lister of Chippewa Falls. Work on this building is progressing rapidly.

BINDING TWINE PLANT.

By Chapter 574, Laws of 1907, there was appropriated \$125,000.00 for erecting buildings and the purchase of machinery and equipment necessary for the manufacture and sale of binding twine. The contract for the construction of this building was awarded to C. W. Noble of La Crosse. The building is being constructed just outside of the west prison wall, but will be enclosed by the new walls that are to enclose this portion of the prison property. Work on the twine plant is progressing very rapidly, the contractors have a large force of men and machinery and the building will be completed this fall.

PAROLES.

Chapter 110, Laws of 1907, provided for the parole of prisoners from this institution by the Board of Control with the approval of the governor. The law provides that before being paroled the convict must have served at least one-half of the full sentence. Those previously convicted of a felony and life prisoners are ineligible. The operation of the law under the rules and regulations you have provided has been very satisfactory, and carried out with very little expense. Each prisoner has had

Wisconsin State Prison.

work provided for him before his release from the institution and monthly reports have been required from both prisoner and employer until the final discharge was ordered. The first meeting for the consideration of paroles was held August 20, 1907. Since then meetings have been held every three months. The results shown below are most gratifying.

Applications considered	69
Paroles granted	34
Applications denied	35
Of the 34 paroles granted,	
17 have received their final discharge	
3 have violated the conditions of the parole agreement	
14 are now making monthly reports.	

Of the three who defaulted in their paroles, one was returned to this institution, one is now confined in a penal institution in another state and will be returned at the expiration of his term and the other escaped and to date has not been apprehended.

In this connection thanks are due the Judges, District Attorneys and others who have answered numerous inquiries regarding applicants and rendered much aid in determining the fitness of the convict for parole.

ESCAPES.

During the period covered by this report there have been several attempts to escape. None from the prison proper were successful. John Kniss, serial number 9493, sentenced from Washburn County to serve two years for the crime of Assault with Intent to Commit Murder, escaped from the prison farm on the evening of Feb. 7th, 1907, and has not been recaptured.

RECOMMENDATIONS.

I recommend that an appropriation of \$60,000.00 be asked for remodeling the cell block of the north cell room. This building was constructed some 35 or 40 years ago and when compared with our new modern cell building leaves much to be desired. The block consists of four tiers of cells in which 286 prisoners spend over one-half of their time. The cells are

Warden's Report.

seven feet long and four feet wide with a flagstone for a floor in each cell. These flagstones are filled with small holes in which water and dirt accumulate. The cells are poorly ventilated and contain no plumbing. The unsanitary condition of such a cell should not require extended comment. This improvement should be started in the immediate future while we have sufficient room by moving the prisoners into the new cell room nearing completion.

I also recommend that an appropriation of \$20,000.00 be asked for extending rear prison walls. The twine plant, now being constructed, is outside of the prison walls, and will have to be enclosed before prisoners can be worked in that department. The part of the grounds now enclosed is overcrowded with buildings.

In conclusion I desire to express to all the members of the Board of Control, my sincere thanks for their kindly advise and support and their harmonious co-operation in matters pertaining to the management of the penitentiary.

To those in charge of the various departments I extend my thanks for their constant and vigilant attention to the needs of the institution and to all subordinate officers I am indebted for the efficient manner in which they have discharged their respective duties.

Very truly yours,

HENRY TOWN,

Warden.

Wisconsin State Prison.

Statistical Tables.

STATISTICAL FORM STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of
Charities and Corrections, adopted May 15, 1906.

Name of institution, Wisconsin State Prison.

Population.	1907.	1908.
Number of inmates at beginning of year.....	639	636
Number received during the year.....	292	317
Number discharged, paroled or died during the year.....	295	298
Number at end of year.....	636	655
Daily average attendance (i. e., number of inmates actually present during the year).....	640	627
Average number of officers and employes during the year.....	55	56

EXPENDITURES.

Ending June 30	1907.	1908.
Current expenses:		
1. Salaries and wages.....	\$39,434 93	\$40,951 27
2. Clothing.....	5,975 70	7,156 16
3. Subsistence.....	34,663 12	33,816 92
4. Ordinary repairs.....	2,603 65	3,749 16
5. Office, domestic and out door expenses ..	36,979 53	34,764 33
Total.....	\$119,656 93	\$120,437 84
Extraordinary expenses:		
1. New buildings, lands, etc.....	34,229 48	70,830 71
2. Permanent improvements to existing buildings.....		7,417 21
Total.....	\$153,886 41	\$198,685 76

Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
 - Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
 - Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
 - This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry, supplies, medicines, engineer's supplies, postage, freight, library, etc.
- Superintendent, Henry Town.

SUPERINTENDENT'S REPORT.

SPARTA, WIS., June 30, 1908.

To the State Board of Control:

Inclosed find the 11th biennial report of the Wisconsin State Public School for Dependent and Neglected Children, ending June 30, 1908.

THE WORK OF THE SCHOOL.

This school was formally opened for the reception of children in November, 1886. Since that time 3,261 children have been received at the school. These children have been kept here for a longer or a shorter term as their necessities might require. In many instances the children have come from sadly neglected conditions to where cleanliness and Godliness prevail. In the large majority of cases the children are quick to respond to their changed surroundings. I cannot say that all are changed but I believe that more than 85% grow into new lives with new desires and new hopes. In fact, I believe this percentage of success in life, even though in humble spheres, is as great as in the average homes throughout the state of Wisconsin. Statistics show that not more than 85% of children throughout the country grow to good lives as men and women. Fifteen per cent of them are not necessarily criminal but many of them are of shiftless, careless, slovenly habits, live in squalor and poverty, so that it may be said, I think, that not more than 85% of the children in the homes in Wisconsin become good citizens, in all that the word implies.

If the children of the State School had not been rescued from their surroundings, in a majority of instances they would have grown into criminal lives, or nearly as bad as that, of slovenly, shiftless habits. So I am more and more convinced that the State Public School is as essential as any charity in the state

State Public School.

of Wisconsin; that it is really the most economical from the standpoint of making good citizens, and that it should be encouraged in every way possible to care for these unfortunate children and lead them to better lives.

The school is founded after the great Bernardo schools in London, and the parent school in this country is Cold Water, Mich., both of which have done a great work in the uplifting of humanity to higher and better lives.

OFFICERS AND EMPLOYEES.

The superintendent has no more responsible duty than that of selecting his officers and employees. Personal friendships should not be considered. Dignified, competent, conscientious, humane, and industrial helpers will do more to make a successful institution than any other factors. The superintendent should be a good judge of human nature: he should be a man who will put politics and friendships behind him and have in mind only the good of the institution. No outside agency; no civil service commission, no member of the state board of control can know all of the needs of the institution in regard to help as well as the superintendent himself. In fact, the registration and examination of applicants for positions in the State Public School are really of no practical assistance. I have tried several who have applied to the Commission for positions and given them a thorough trial, and in every instance they have proven failures and soon had to be relieved of their work or else kindly resigned.

I find upon investigation, that in the main; these people who had made application were those who had failed in private life; those who could not, perhaps, obtain positions of good salary with very little returns therefor. In some instances, I have found that applicants to the civil service commission had made application for positions in several state institutions and had concluded before coming to the State School to try all of them to find the easiest place with the best salary therefor. So far as the State Public School is concerned, the civil service commission has been of little or no help in the selection of employes, although I cannot question the sincerity of the commission or

STATE PUBLIC SCHOOL—BUS GOING TO TOWN.

Superintendent's Report.

of the executive officer thereof. I believe they have tried to do the best they could under the circumstances, but, in my opinion, the state institutions should be relieved of the provision of this law and a superintendent should be engaged who will pay no attention, whatever, to politics or friendships in the selection of employees. In fact, I do not believe with the scarcity of help that has prevailed during the last five years, that any superintendent in the state institutions has made political appointments or has appointed special friends to places, regardless of their qualifications.

THE PROBLEM OF THE SCHOOL.

The great problem of the State Public School is the placing of children in good homes, in watching over them to see that they have good care, physically, morally, and mentally; that they are surrounded by good conditions that will tend to bring them into good citizenship in later life. As a rule, the preliminary steps in placing children in the home comes from the guardian who makes either a personal or written request for a child. A good judge of human nature can decide many important qualifications from the personal appearance of a man or woman and can judge something of them by their letters in making application for children. I have had many applications, in my experience from men who "made their mark," were unable to write their names. These applications have not been followed up or investigated by the officers of the School but have been promptly rejected. Such homes would be found without any reading matter of any kind, anything to encourage the child to a better life. Perhaps the man might reason that, inasmuch as he had gotten along through life without an education, others could do the same. Applications from saloon keepers or those engaged in the sale of intoxicating liquors are also promptly rejected.

If a written application is made on one of the blanks furnished by the State School, the rule of the school is for the agent to visit the home and make all inquiries possible in regard to the applicant. The agent inspects the home to see whether it is neatly and cleanly kept or not, also the surround-

State Public School.

ings of the buildings, and some homes have been rejected because the applicant was very careless about caring for his animals and his barn and his farm tools, the agent feeling that such habits would be important to the child and that he ought to be taught better lessons than those which the shiftless farmer would teach.

The responsibilities of the agents are very great, indeed. It would seem as though they held the future life of the child by their decisions in regard to the home and I think that there is no work that requires more careful judgment, earnestness of purpose, thorough conscientiousness than that of a person placing children in homes where their future will largely depend upon their surroundings.

With this thought paramount in the work that I have done in the school, I have retained the agents and take this opportunity to commend the work that they have performed.

Mr. A. F. Brandt commenced his work in the school the 1st day of September, 1897, nearly eleven years ago. He had been a teacher and county superintendent of schools and had a thorough understanding and appreciation of child life and, during this long term he has gone in and out looking after the wards of the State School almost or quite as earnestly as a parent would look after the welfare of his children.

Miss Elsie M. Loomis, agent for the southern part of the state, commenced her work in the State School, April 1, 1900. She had been a teacher for a few years of her life and had valuable experience in child life in the State Institution at Chippewa Falls. She has always had due appreciation of the importance of her work and has performed it well.

Mrs. E. M. Huebing was assigned the duties of state agent by the Board of Control last October. I regretted very much when she felt that she could not endure the fatigue of the work or the responsibilities which came to her. She was as successful as a new agent could expect to be. She was earnest, careful, and painstaking, but the duties were impairing her health and she resigned in April. I am informed that her successor is a Miss Evans, of Spring Green, Wis., and that she will commence her duties soon.

STATE PUBLIC SCHOOL—OFF FOR THE FARM.

Superintendent's Report.

These agents ride to all parts of the state. The "needs of the children" are ever before them and I know that they feel each and every day of their lives the responsibilities of their charge and the anxiety as to whether the very best thing has been done or not. Only a person who is in this active work can appreciate what these responsibilities and anxieties mean to the faithful agents.

After long rides, frequently forty miles a day, it may be through snowdrifts or over muddy roads; it may be after a runaway team or after a serious breakdown miles from any house, they are obliged to pass the night in an obscure country hotel where the accommodations are very poor. Almost their first work after reaching the hotel they make their day's report to the superintendent on a blank postal card as follows:

Date.....1908
 To the Superintendent of State School:
 I am to-day at.....
 I will be at.....Hotel, at.....
 on the.....inst.
 Signed

 Agent.

The next day is a repetition, through rain and snow, through any condition of the elements. They visit the homes of the children, the schoolhouse if school is in session, and do all they can to ascertain the true condition of the child. Their trips vary from a few days to three or four weeks, depending upon circumstances. When they return to the School they have their reports to complete, their children to select for another trip; in fact, they have little or no rest during the entire year.

The agents' work deserves commendation and appreciation, and if we have had any success in the work in Sparta, the agents have contributed their part of it.

THE POSTAL CARD SYSTEM.

At the beginning of my administration in 1899, I prepared a blank printed on a postal card, for the report of guardians to the superintendent of the State Public School, as follows:

Our children enjoy their every day life of school and recreation, but, of course, look forward to their festive days with keen anticipation. All the officers of the school devote their time to

STATE PUBLIC SCHOOL—FOUR OF OUR BABIES IN GOOD HOMES.

Superintendent's Report.

these holidays to give the children a grand, good time. The Fourth of July is duly celebrated by the children with a procession of boys in improvised uniforms, drums beating, flags flying, and the most essential firecrackers. A good dinner is served and then in the afternoon it has been the custom for some years, to provide them with candy and lemonade, and in the evening there are fireworks to take their attention until the tired, but happy children are glad to seek their beds.

Our annual picnic is also a day which the children look forward to with the keenest enjoyment. The "whole family," about nine o'clock in the morning, depart for the grove on the farm and there the festivities occur and the day is passed in games, contests for small prizes and, or course, a good picnic dinner is enjoyed by all; then there may be boating and bathing in the river which runs across the farm and these are a fitting close to the day's enjoyment.

Thanksgiving day, Christmas, and New Years' Day are duly observed, and but few children are better supplied with sensible gifts than the children of the State Public School.

The teachers and students of the Milwaukee Downer College never forget the children of the State Public School. For many years a box has been sent as regularly as the day comes and it contributes very much happiness to the children. It is a kind and generous remembrance that the pupils and officers of the State School are thankful for.

PER CAPITA STATEMENTS.

Nothing is more unfair or unjust than to make per capita statements of the expenses of the State Public School, basing these statements on the children that are cared for. I quote from my report of two years since as follows:

"Some people are exceedingly fond of making figures for per capita expenses. No method could be more unjust and unfair. They simply take those in the school and give no credit, whatever, for those in homes. Last year we cared for more than 1,000 children. Now take your per capita statement: an annual appropriation of \$38,000 divided by 1,000 gives \$38 per capita for the year. To carry it to the extreme, about seventy-three cents per week and yet this is a fairer statement than to take just those who are in the school, or the average number in attendance.

State Public School.

The fact remains that the State Public School cares for more than one thousand children each year, at an actual cost of seventy-three cents per week for each child and costs the state less per capita than any other state institution."

FARM AND GARDEN.

The farm and gardens of the School are of great benefit to the large boys as a means of instruction and getting them into habits of industry, and also most profitable in the results.

We produce oats, hay, corn, rye, potatoes, mangels, beans, great quantities of small fruits, such as currants, raspberries, blackberries, strawberries, and everything in the line of vegetables or food for the inmates of the institution. In fact, we purchase very little of fruits or vegetables outside of these that we produce, and probably no families are better supplied with these articles of food than the State Public School.

We have a herd of twenty-five thoroughbred Holsteins which furnish an ample supply of milk for the children. We also raise poultry and pigs.

With the farm herd last year of thirty head of cattle, and with some forty or fifty hogs to fatten, and seven horses, we were able to get through the winter and keep our stock in good shape without purchasing any hay and but few bushels of oats for seed, and less than one hundred bushels of corn. The producing power of the farm has been increased during the last seven years more than 100% in addition to what it was before and we have made the same record in our gardens.

Our gardener is one of the best in the state and takes a personal pride in what he can produce for the School. He considers he is responsible for the supply of vegetables and small fruits and works to this end and has always succeeded admirably.

MANUAL TRAINING.

There is still a great scarcity of help for the homes and for the farms of Wisconsin. Many children and young people are taught nearly everything from books to the exclusion of work, or to the exclusion of instruction in household duties. In fact, to the exclusion of work with the hands. Boys are taught just

STATE PUBLIC SCHOOL—A CLASS IN SEWING.

Superintendent's Report.

enough about tools to create a desire for a trade and thus a good farmer or laborer is spoiled. While our boys at the School are here for an indefinite time, they are taught farming; are taught how to prepare soil, something of fertilizers, how to seed, how to care for the harvest, how to care for stock, and how to handle a team. All of this is done under the direction of the boys' supervisor, but it is very profitable to them because it gives them a start in farm work and a love for it, something, in my opinion, that the country demands at the present time.

Equally important, the larger girls are taught sewing, plain cooking, and many things that will fit them for domestic service. This is done in our domestic science department by a teacher who has been in her position eleven years and has done excellent work. It is especially valuable and desirable here because many of our girls come from homes where the mother is ignorant and careless in housekeeping. In these two branches, the farm and in the domestic science department, our manual training is directly practical and I feel the necessity of preparation for domestic life is the most valuable training that our children can have. Some of our pupils have gone into higher institutions, high schools, normal schools, and the university, and we have had some graduates from the university, one this year. Also one in Beloit College.

A great majority are preparing for domestic service and I believe in this work. The school officers have chosen wisely for them in encouraging to prepare for domestic life.

OUR TEACHERS.

The school employs five teachers for the following departments: Grammar, intermediate, primary kindergarten, and domestic science. Our teacher in the grammar room has been in her position seventeen years. The teacher of the primary, nearly nine years, and the teacher of domestic science nearly eleven years. Our present teachers in the intermediate and kindergarten rooms have resigned their positions to take effect at the close of this school year and new ones have been engaged.

I mention the years of service of the teachers only for this

State Public School.

reason: That officers and employes of the state school have not been removed with changes of administration, but have been continued and I hope, and have no doubt, they will be continued as long as their services are acceptable.

The changes in pupils and the fact that the agents select the brightest and best pupils to take to homes soon after their arrival are not conducive to the very best results in school work, but the teachers do the very best they can for all committed to their care.

The child is placed in school the next session after he arrives here and is under excellent discipline and instruction, something that he is found to be sadly in need of as long as he remains in the school.

Many boys and girls write to the superintendent years after they leave the school and express their gratitude to the faithful instructors who taught them to seek for knowledge even after school days were over.

HEALTHFULNESS OF THE CHILDREN.

We have been fortunate in having but one epidemic since my last report. Last winter we had diphtheria; in all seventeen cases. We were quarantined for one week but owing to the watchfulness of our physician, Dr. Sarles, and the precautions that he took and the help that he gave in his treatment of the afflicted, but one child died and that a little girl four years of age, who some time after the diphtheria was over, succumbed to heart failure. I cannot speak too highly of the work that Dr. Sarles did in this connection, but his position in the medical world needs no commendation from me. Also the hospital treatment under the faithful care of the matron and nurse, Miss Mitchell, with her most competent assistants, contributed very much to the suppression of the epidemic. In fact, the physician and the matron of the hospital working carefully and faithfully as they did in their respective positions, have contributed very much to the general healthfulness of the children and sometimes months have elapsed with not a child in bed from sickness.

STATE PUBLIC SCHOOL—IN THE SCHOOL ROOM.

STATE PUBLIC SCHOOL-BABY COTTAGE.

Superintendent's Report.

In fact, our children enjoy far better health than the same number in homes because they have regular habits of life and are more closely inspected than the average child in the average home.

THE COTTAGE LIFE.

We have no more responsible position at the school than that of a matron, a lady who takes charge of thirty boys or girls and cares for their physical needs, and also trains them in habits of morals and manners and the little things that help to build into a good life hereafter. The superintendent feels that he has no more responsible duties than that of selecting a matron. Oftentimes many applicants have been rejected, and I presume those who might have passed an examination for the position; but nature has to give these matrons the necessary qualifications and these can never be determined positively without actual trial. Whenever trials have resulted in failures, changes have been promptly made, and I feel that if the school is entitled to any measure of success under my administration it has been in the selection of good conscientious, christian ladies for the positions of matrons in the different cottages.

THE BABY COTTAGE.

The legislature of 1901 changed the law eliminating the age of admission at three years. The bill was bitterly contested by certain societies in the state because, no doubt, in the opinion of members of said societies, it would infringe upon their opportunities; but the bill became a law and went into operation on the 30th day of May, 1901.

A vacant cottage was opened, a matron and assistant installed, and the first baby was received from Dane County on May 31st. Since that time 328 babies have been received.

Last year we had a very important addition made to the baby cottage. We had been crowded for room and during the preceding years had been forced to decline to receive all applicants; but this addition has given us splendid, airy rooms, well devised, and we are now able to care for thirty babies and care for them well, far better than in the average homes. In

State Public School.

fact, our mortality tables show a smaller percentage of deaths than in the homes throughout the state.

For the last three years we have had the services of Miss May Masters as matron in this important position, and I cannot speak too highly of the work that she has done. She has been a mother to these homeless little ones and has carefully studied their physical needs and taken care of them in a manner that commends itself to every person who inspects her work. While matrons in other cottages have done their work well, I consider that the matron of the baby cottage has had a most responsible position, and one that has required careful watchfulness which Miss Masters has shown on every occasion.

We have succeeded in finding good homes for nearly all of these babies, lately exceeding our usual number of thirty in the cottage, although many have been received during the last year.

DOMESTIC SCIENCE DEPARTMENT.

The girls are taught plain cooking. They are taught to cook vegetables, meat, plain cake, bread, and some other essential provisions for the table. They make excellent bread and their other work is very well done, indeed.

Their work in sewing is not only instructive and helpful to them in the way of cutting and making, but it is very helpful to the school, as the following list will show:

944 Diapers for Baby Cottage	5 Corset Covers
34 Dresses	24 Pillow Cases
21 Night Dresses	4 Sunbonnets
39 Aprons	1 Dress Waist
940 Buttonholes	12 Dish Aprons
80 Dishtowels hemmed	12 Dishcloths hemmed
42 Towels hemmed	62 Buttons sewed on
13 pr. Drawers	2 Ironing cloths hemmed
6 Underwaists	12 Fancy Bags for Christmas
6 White Skirts	6 Fancy Aprons for Christmas
4 Dark Skirts	20 Needlebooks for Christmas
3 pr. Curtains	1 Embroidered Pillow Cover
24 Boys' Waists	Christmas
19 Tablecloths	2 Embroidered Belts, Christmas
18 Boys' Shirts	6 Handkerchiefs
24 Bibs for Baby Cottage	

STATE PUBLIC SCHOOL—A LESSON IN COOKING.

Superintendent's Report.

DIETARY FOR ONE WEEK.

Although high prices have prevailed on all eatables during the last biennial period, our children have been well fed. The food has been of the best quality, as all meats, vegetables, bread, and butter have been of the same kind in every respect as those furnished officers and employes.

The following dietary was taken during the fall. The list varies of course, during the year. While there may not be as many luxuries as some children have in homes, the children have all they need at all times. Thanksgiving day, Christmas, and other holidays, bountiful dinners are served, such as may be seen in the best homes on such occasions.

Monday.

Breakfast—Oatmeal, meat, potatoes, milk, bread, and butter.

Dinner—Roast beef, potatoes, gravy, pickles, muskmelon, bread, and milk.

Supper—Tomatoes, bread and butter, cold meat, milk, and biscuits.

Tuesday.

Breakfast—Oatmeal, milk, potatoes, bread and butter.

Dinner—Boiled meat, gravy, potatoes, pickles, boiled cabbage, milk, bread and butter.

Supper—Cold meat, tomatoes, apple sauce, milk, bread and butter.

Wednesday.

Breakfast—Oatmeal, potatoes, milk, bread and butter.

Dinner—Roast beef, potatoes, gravy, stewed tomatoes, pickles, milk, bread and butter.

Supper—Crabapple sauce, milk, bread and butter.

Thursday.

Breakfast—Oatmeal, hash, milk, bread and butter.

Dinner—Roast beef, potatoes, gravy, Lima beans, pickles, milk, bread and butter.

Supper—Cold meat, cookies, syrup, bread and butter.

Friday.

Breakfast—Oatmeal, potatoes, hash, milk, bread and butter.

Dinner—Celery soup, meat, potatoes, pickles, crackers, bread, milk.

Supper—Cold meat, peach sauce, milk, bread and butter.

Saturday.

Breakfast—Oatmeal, potatoes, meat, milk, bread and butter.

Dinner—Meat, potatoes, pork and beans, pickles, milk, bread, butter.

Supper—Cold meat, prunes, milk, bread and butter.

State Public School.

Sunday.

Breakfast—Oatmeal, potatoes, milk, bread and butter.

Dinner—Frankfurt sausage, potatoes, milk, sweet pickles, bread, butter, apple pie.

Supper—Peach sauce, meat, beans, milk, bread and butter.

Hominy, rice, and corn meal are served at various times, but the children prefer oatmeal for breakfast. Puddings, cake and fruit are also served from time to time.

IMPROVEMENTS.

Since my last report and account of special appropriation, we have made some permanent improvements very essential and necessary to successful work. The special appropriation of 1905 paid for a tunnel 1280 ft. long connecting hospital with the central heating plant. The tunnel was completed in August, 1906.

A modern bake oven was built in July, 1906, with a capacity of 200 loaves at one time. It is an economical oven requiring very little fuel and it was something very much needed at the school because the old oven did not have sufficient capacity and would not do good work, consumed quantities of fuel, and was unsafe.

Last fall we built a shed for our farm machinery, which was also a measure of economy, on the special appropriation of \$800. It is sufficient for many years to come.

The coal shed with a capacity of 900 to 1000 tons of coal, built at an expense of \$4,000 last year, has taken the place of a temporary shed which was built by the help at the school. The new coal shed building is completed with a railroad and cars for running the coal directly to the boilers, and will be sufficient for the school for a number of years to come.

Within the last two years we have remodeled our cow barn, putting in cement floor, some ventilating shafts, and new stanchions, and at this writing in June, 1908, we are putting a new cement floor in our horse barn, doing some permanent cement work in our boiler room and doing away with the last of the old board walks, replacing them with cement so that we will have none but cement walks on the grounds.

Superintendent's Report.

CONCLUSION.

With the completion of this work, my services as superintendent of the state public school, will end after a service of nine years.

My resignation, which was handed to the board on May 4, 1908, was for the reason of poor health and a feeling that on this account I could not do the work which a superintendent ought to do. The step was not hastily taken. I came to this conclusion a year ago, that my resignation would be handed in, to take effect the first day of July, 1908.

There is no member of the board now in service of the state who was on the board when I came to the work in 1899. But throughout the long term that I have been here with the past board and the present board, I have received most courteous and careful consideration and have had many helpful suggestions in the work, for which I extend my sincere thanks.

I believe the state public school system is the very best for caring for dependent and neglected children. I could give many reasons for this belief but they are not necessary at this time. I can only hope that the work may go forward and that better work may be done in the future than has ever been done in the past for the neglected children of Wisconsin, and I believe the work has grown better from year to year and I sincerely wish that it may continue.

Respectfully submitted,

M. T. PARK.

SPARTA, WIS., June 30, 1908.

State Board of Control:

I wish to add something supplemental to report for the last biennial period.

I can say, as the rulers of nations are always pleased to say, there is the profoundest peace at home, and we are on good terms with all the world, or if there is any case where we are not it is the world's fault, not ours.

State Public School.

There are one or two "problems" here. One—and this is always the first and greatest—is that of the babies.

The second is the permanent population of the girls' cottage.

The problem of the babies would be very much simplified if there was some restriction as to the age at which they may be brought here.

It is the custom of poorhouse managements and of such institutions as the Beloit "Home" to bring to the State School their illegitimate product as soon after it is born as the managements can pack up and get here. Thus we have had infants placed in our care this summer from forty-six hours old to a week or two. Numbers of them have been brought from Beloit and arrived in very poor condition, the several hours of the journey having evidently been bad for them. These babies, or many of them, are poor, weak little things with hardly enough vitality to take nourishment. They are doubtless the victims of the efforts of the mother and father continued through a period of several months to get rid of them; so that when they come here there is nothing to build on.

I would like a rule under which no infant under 30 days of age, and no illegitimate infant under 90 days of age, should be received here; and, if it could be enforced, a law providing that the management of county houses, lying-in hospitals, and the like, should require the mothers of illegitimate children to nurse them until they are three months old. This suggestion, it is unnecessary to say, is in the interest of the infant and not of the mother.

The number of babies that will be provided for here will, I have no doubt, continue to increase. On the first of July there were twenty-six, and this number increased to forty-five during what we might call the harvest season for this brand of babies, to-wit, the months of July, August and September.

The capacity of the nursery is about forty, and forty are really too many for it.

There are in the nursery a number of babies, as they are called, a year and a half to two and a half years of age. They are too large to be with the infants, and too small to be in the cottages with large children; and in cottages A and E there are

Superintendent's Report.

six or eight children from three to four who ought to be taken away and put with these other children in a department by themselves.

We need more room in the nursery; and because of the expensive character of the equipment, and the difficulty of securing competent heads for such buildings, I would change the idea of "cottage life" and small families which pertains to the other buildings, and make a "nursery annex" which could be under the same control as the main nursery building.

Of needed changes and improvements there are many.

There is insufficient room in some of the cottages and in the administration building to meet the demands that are made upon it.

The cottage for girls, with dormitories for forty, has fifty-seven children sleeping in forty-two single 3-foot-wide beds, and there is not only no room for more beds, but there are already several more than there should be, keeping the health of the children in mind.

There are a number of children of varying ages in this cottage who will probably never go into homes and stay in them. They are not quite of the class that should be sent to Chippewa, probably; and they are not such incorrigibles as should send them to the Industrial School in Milwaukee. They are too good to be returned to their counties to grow up in the poorhouses. They have been sent to private families repeatedly, but always come back, thus increasing the permanent population. I suppose they will stay here until they are eighteen, after which there seems to be no provision for their care.

The care and control of this class offers one of the difficult problems—what to do with eighteen year old girls who have failed in homes, and who have failed in school, and are not competent to take good positions as servants in families. They never need care and protection as they need it the day they are started out to shift for themselves. That there should be some permanent provision for caring for this class of girls, and for some boys in a measure like them, seems to admit of no question.

State Public School.

The reason why the cottage for girls is crowded is its "permanent" population; and this has grown since I came here, on the first of July. It is likely to continue growing. There are the girls above mentioned, several cripples, a number of colored girls, and two or three mixed blood Indian girls, who may have to be kept in the cottage for years.

There is insufficient sleeping room in the main building; while the little rooms intended for sitting rooms for the matrons of the cottages are all used as sleeping rooms for either teachers or agents, and the matrons therefore have no rooms where they can go to be alone and rest except their bedrooms.

There is a room used as a chapel, on the second floor of the administration building, which could be divided into six fine sleeping rooms, providing rooms for the teachers and others, thus leaving the sitting rooms to the cottage matrons.

There are at present three employes entitled, on the basis of the pay they are receiving, to rooms on the grounds, who sleep at their homes because there is no room for them in our buildings. If they demand rooms as the other employes have them, or leave, and we are compelled to engage people from away to take their places, we have no available rooms for them.

The change suggested will give sufficient room for all, if we can have the third floor of the hospital finished off into rooms so that the hospital employes can use some of them, giving up rooms they at present occupy in the main building and the nursery. The employes of the hospital should have rooms in the hospital, where they can be within easy reach in case of necessity.

The third floor of the hospital can be finished into seven or eight good sized rooms, and there may easily arise conditions when they will be needed. Last winter there was an epidemic of measles, forty cases being treated in the hospital at one time. Had diphtheria broken out at the same time, and half a dozen, or even two or three, children come down with that malady, the situation would have been most serious. It would be a problem what to do under such circumstances if they arise this winter.

The kitchen departments are in unsanitary condition, and are most inconvenient and uncomfortable, especially during the hot

Superintendent's Report.

season. Last summer the heat in the kitchens, which are in the basement of the administration building, was all but intolerable, and I wonder that the people who worked there could endure it. If the partitions were to be taken out of the basement, throwing all of the rooms into one large one, and an outside chimney be built to which all of the ranges could be connected, there could be a circulation of air through the room which would relieve the condition complained of, and make possible sanitary sinks which are at present the abiding places of innumerable cockroaches, to get rid of which seems an impossible task with the construction as it is.

Another advantage of the outside chimney would be felt in the relief from the heat of the present chimneys in the living apartments above.

There is at present a large chimney connecting with three ranges that runs up through the center of the building, forming one side of closets on the three floors, and heating them to that degree that they can not be used for the storage of clothes, and heating the dining and sleeping rooms and the living apartments of the superintendent's family to a degree that makes them about as uncomfortable as rooms could be. Removing this trouble would greatly relieve conditions that are at present not only uncomfortable but menacing to health.

A balcony might be built along the south side of the second floor, off the superintendent's apartments, giving the family an opportunity it does not at present have, to get fresh air without going downstairs and out into the yard.

The use of the present chapel for sleeping apartments would necessitate the construction of a building for an assembly room, which should be on the ground floor, with a gymnasium and manual training on the second floor, and natatorium in the basement.

Bathing facilities in two of the cottages, those where thirty-odd small boys are housed, are entirely inadequate. In each of these two cottages there is but one small bath tub and an unsatisfactory over-head shower bath, in each case on the first floor, while it should be in the basement. In the girls' cottage and the cottage for the larger boys there are five bath tubs in the

State Public School.

basements, on wooden floors, without any shower. I would recommend cemented floors with drains and side showers attached to hose, so that quick showers could be given to the children at more frequent periods than once a week, especially during the hot weather, for all of the cottages.

The outside closets are an abomination, being filthy and impossible of sanitary conditions. They are also the congregating places for the children where things are said and done that are not conducive to clean morals. There are three of these to which 140 children go several times a day. And besides being unfit on every other account, they are much dilapidated. I would recommend that the plans of the Board, long since made, for putting closets of improved sanitary construction in the basements, where there is ample room, be carried out.

No attention has been given to out of door gymnastics, or to playgrounds for the children. During the summer vacation of two months there is absolutely nothing for more than a hundred small children to amuse themselves with except what they can get out of two pavilions, the floors of which will not stand for more than a year to two; and a swing or two, and a rough merry-go round constructed by themselves. It is little wonder that these small people find amusement in tearing down the insides of the closets out in the yard, and filling the vaults with whatever movable bricks and boards they can lay their hands on. They must do something, and do it all the time.

There is so much in the line of modern playground equipment that we can hardly go amiss in getting any part of it. I should like to see a good start made at fitting up the playgrounds before the next summer vacation.

The roofs on several of the buildings will have to be renewed at an early day. All but those of the administration building and the hospital have been painted this fall, and tin shingles have been used in large numbers, so that there will be no leakage this winter, we hope. These roofs may last two years, but they are old and the shingles are badly rotted.

STATE PUBLIC SCHOOL—PLAY PAVILION.

Superintendent's Report.

FARM.

This farm is a poor, sandy tract, and needs more fertilizer than can be made for it with the stock we keep. The number of cows should be increased for the double reason that there would be more fertilizer and more milk, which is needed, and which would be economical to have. An addition to the lower barn, of thirty feet, to make room for twenty more cows, should be built, extending towards the horse barn.

Another economy of fertilizer would be the construction of one or two cisterns in the barnyards for liquid manure, which at present all runs away to the river.

On the subject of the conservation of fertilizer, it is worth saying that we have gathered up a number of loads of cow chips from the pastures and places where the cows congregate at night, and will have it for use on the garden, where it is much needed, next spring. There will be fifteen or twenty loads of this.

The bridge across the La Crosse River, which passes through the farm cutting off a plow lot of 24 acres which has not been cropped for three years, because it could not be reached, will have to be renewed. This piece of land has been plowed this fall. It has before now yielded enough silage to fill the silo. It will be planted in some way next spring; but the bridge is very necessary.

Some fencing, particularly about the barn yards, is necessary. These fences are old, the posts rotted off, and the appearance is not right for a model institution farm.

There are in the cottages and the main building a large number of old wooden bedsteads with worn out springs. In a number of instances two wire mattresses have been used on one bed because one is not strong enough to hold up. And the chairs and stands are dilapidated, needing to be renewed. Many of the rugs and carpets are also worn out and unfit for further use.

Our garden was at the mercy of the drought last summer, and proved a failure where it might have been saved by means

State Public School.

of a simple irregation plant, consisting of a cement tank of say, 40 feet diameter and 4 feet deep, the water supply to have been brought from the La Crosse River, a soft water stream, by means of a small gasoline engine and pump, with iron piping. There might have been made a sufficient saving last summer to pay for the plant; and with such an outfit the garden and all of the small fruit would be safe, no matter what the weather may be.

Multiplying these tanks two or more times would make it possible to take care of the potato fields even in a dry season. Our crops were burned up long before those on heavier lands had begun to suffer.

There is no adequate internal telephone system, and one is much needed to connect the office with the engine house, the horse barn, the farm house, the nursery, and the hospital, if not with all of the cottages; and with the house of the engineer and the assistant steward. It seems to me that no argument is required to make this need plain. A leak in a steam pipe in one of the cottages, discovered some time after midnight, means a trip from the cottage to the main building by some of the women, and after the superintendent is aroused, a trip by him out to the house of the engineer on the further side of the grounds; a half hour lost, and a lot of discomfort. This is not exactly a hypothetical case. One like it happened within the week.

One recent Sunday morning a severe case of diphtheria was discovered in Cottage A. I went to the cottage, then to the hospital, then back to the office to telephone; then to the cottage to get the patient ready to move, then to the engineer's house, Mr. Venus being the only man on the place to help, using up half an hour in hustling around the grounds on foot when the whole thing could have been arranged in five minutes by telephone. If it is necessary for the superintendent to find anybody on the premises, and there is no messenger at hand, he has to go out and look him up.

With a large number of boys in the school, many of whom are destined to remain here indefinitely, while others will have to stay for months if not years, there are needed some facilities for manual training.

Superintendent's Report.

There is not a work bench or a set of tools with which a boy can be taught to do any of the things that every boy should know. The value of such training needs no demonstration by me. A boy who is big enough to handle tools ought to know how to saw a board off square, and how to make a good joint, and how to nail together a fair sort of box. If he can be taught this he can be taught how to do almost anything with tools; and knowing how to use tools makes his chances to succeed many fold greater when he goes into a home. The twelve year old boy who can use a saw and plane can do what many farmers do not know how to do.

What we call our "Domestic Science" department is doing good work with the girls, teaching them something about cooking and sewing. It will shortly have classes of boys learning the same things. Every boy at twelve years of age should at least be learning how to set a patch on his trousers, sew on a button, and darn his stockings, and every boy is to receive this instruction.

Few of the children know how to do anything without being watched. I am going on the principle that a child should be taught how to work, and then held responsible for the work he is set to do. If he slights his work and is required to do it all over again he is pretty apt to be careful for a time; as for instance, in the cleaning of steps, or the washing of dishes.

The "Ringworm Institute," established two and a half months ago, has proven a success. The old hospital building was put in order for the reception of twelve "patients," and a competent woman was engaged to take care of it and them. Dr. Sarles entered into the scheme of ridding the place of the pest, and of the twelve cases sent to the "Institute" at the beginning, and three others that came to the School or broke out in the cottages, fifteen in all, ten have been returned to the cottages, cured, while the five remaining will be cured by the first of the year. It is slow work, but keeping eternally at it, as at almost anything, brings final success. A ringworm discovered in time and tackled with vigor, can be cured in the cottages, I believe, without danger of spreading. At any

State Public School.

rate we look upon this old time trouble as a thing of the past at this institution.

We have accomplished considerable work during the past five months. We have given the little cemetery a presentable appearance by clearing out the brush, leveling the lot, and covering it with black earth brought from the bottoms near the river; and have seeded it with lawn grass.

There has also been made a plot of the ground, and the graves are located and named; necessary information being gleaned from the records. There was no cemetery record kept by itself.

The coal shed, built of light colored brick, has been painted, or stained, and looks as if it had been built of the same colored brick as the other buildings.

The little acetylene gas building at the rear of the main building has been converted into a room for house supplies, and the basement was given a cement bottom, and, being connected with the kitchen department by a tunnel, is now used for vegetables.

The old main building basement store room has been divided by a partition, lathed and plastered, one part being used for a preserve store room, and the other for a pantry for the lower dining room; and all of the work done is good work.

The farm horse barn has been finished with good stalls for the horses, and stanchions and calf pens for the young stock.

The hard wood floor in Cottage A was taken up and relaid where it was warped and rough.

I have changed the bath room and pantry in the nursery, putting one where the other was, thus doing away with the odor from the latter in the children's dining room, and have put in necessary shelving in that and several other cottages, and enlarged the lavatory in Cottage C.

The floors of the two pavilions were found to be rotted around the edges, making them unfit and unsafe for the children to play upon. These have been repaired.

The floor in the horse barn has been taken out and a cement floor put in. The joists were rotted out so as to make the stable dangerous for the horses.

Superintendent's Report.

The farm was littered with pieces of board, sticks of wood, old boxes, barrel staves, limbs of trees, and a general air of untidiness prevailed. This has been somewhat remedied, so that when snow comes we can say that there is not a board or a stick of wood anywhere on the ground; and we have trimmed the dead limbs from the trees in the lower woods, picked up and cut up the fallen timber, cut out the old pines from the little grove back of the farmhouse, dug out about 100 box alder trees, trimmed the grass along the borders of all the walks, trimmed the row of hackberry trees along the front fence, made a cinder walk between these trees and the fence, and started the work of making a good road in front with a split log drag. And we have painted the roofs of nearly all of the buildings.

We have grubbed out the alders that were growing back from the river on the pasture land, improving the appearance of that part of the farm very much besides increasing the space for grazing. The river is going to show prettily next summer through the alders that are left along its banks.

It seems to me that in the erection and furnishing of the buildings at the State School, the idea of "economy" has largely been the idea in mind; and time has proven that it was not always wise economy. The bottom of pretty much everything has either gone out or has holes in it; and the buildings are getting old, anyway. We need some generous expenditures of money to put the property of the School in such condition as it ought to be in, and to give us the additional facilities needed.

I will estimate that we shall need in addition to the cost of maintenance, \$35,000 divided as follows:

Girls' Cottage.....	\$8,000
Nursery Annex.....	4,000
Change of Chapel into bed rooms.....	1,200
Finishing third floor of hospital into seven rooms.....	1,800
Repairing the kitchen and building outside chimney.....	2,000
Balcony on south side second floor M. B.....	500
Assembly, gymnasium and natorium building.....	8,000
Improved bathing facilities in four cottages.....	800
Putting in closets in basements of four cottages.....

State Public School.

Out of door gymnastics.....	250
New roofs for four cottages and school-house.....
Thirty foot extension to cow barn.....	1,000
Ten cows	2,000
Two liquid manure cisterns for barnyard.....	300
New bridge over La Crosse River.....	1,000
New fencing.....	200
Bedsteads and bedding	700
Furniture	500
Irrigation plant for garden	700
Telephone exchange	400
Manual training	500
General repairs and painting

Respectfully,

C. M. BRIGHT,

Superintendent.

STATISTICAL FORM STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of Charities and Corrections, adopted May 15, 1906.

Name of institution, State Public School.

Population.	1907.	1908.
Number of inmates at beginning of year.....	156	150
Number received during the year.....	208	261
Number discharged, paroled or died during the year.....	214	231
Number at end of year.....	150	180
Daily average attendance (i. e., number of inmates actually present during the year).....	143	165
Average number of Officers and employes during the year.....	48	49

State Public School.

EXPENDITURES.

Ending June 30	1907.	1908.
Current expenses:		
1. Salaries and wages.....	\$17,501 37	\$19,189 56
2. Clothing.....	2,049 31	856 30
3. Subsistence.....	9,231 53	10,947 33
4. Ordinary repairs.....	1,499 95	1,378 68
5. Office, domestic and out door expenses...	11,006 57	14,729 39
Total.....	\$41,288 83	\$47,101 35
Extraordinary expenses:		
1. New buildings, lands, etc.....	\$1,550 40	\$8,632 29
2. Permanent improvements to existing buildings.....		
Total.....	\$42,839 23	\$55,733 64

Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
- Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
- Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
- This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

SUPERINTENDENT'S REPORT.

CHIPPEWA FALLS, WIS.

The Honorable, the State Board of Control, Madison, Wis.

GENTLEMEN:—I, herewith, present for your consideration, the sixth biennial report for the Wisconsin Home for Feeble Minded.

The movement of population is as follows:

In home July 1st, 1906	685
Admitted July 1st, 1906 to June 30, 1907	111
Returned	42
Discharged	4
Eloped	11
Died	35
Went out on visit	41
Remoaning June 30, 1907	747
Admitted July 1st, 1907 to June 30, 1908	66
Returned	33
Discharged	8
Went out on visit	38
Died	33
Eloped	7
Remaining June 30, 1908	760

The last two years have added materially to the growth of the institution. The generous appropriation by the last Legislature has made possible the erection of three new cottages of the most approved fireproof type, which will be ready for occupancy well within the present calendar year. This will complete the buildings of our institution, designed especially for dwellings, according to the original plans, and provide accommodations for 1050 inmates.

In the way of permanent improvements, we have made many cement blocks in the past two winters, when other work was wanting. Our larger boys assist very materially in this work. From these blocks have been constructed a large carpenter and paint shop, enabling us to take the inflammable material,

Home for Feeble-Minded.

connected with these two industries, from the basement of a custodial building, where they might imperil the lives of scores of helpless children. This work is now established in quarters so commodious and convenient, that the larger amount that can be accomplished will undoubtedly pay good returns on the investment and make this more profitable, as well as safer.

The large tract of wild land which the State, with commendable foresight procured at the beginning, is being gradually converted into tillable soil by those of our boys who are not adapted to occupations requiring some intelligence.

To utilize this land properly, with the means available for this purpose, we have constructed a creamery and silo, and the center and one wing of a cement barn, all fireproof to the roofs. A second wing will be completed in a few weeks. This will accommodate sixty-eight cattle over and above our former herd. We are now able to make all of the butter we need, besides furnishing all fresh milk necessary for the children. We expect to increase our dairy as the need of the institution grows.

The certainty of the grass crop in this section, and the fact that this work is so well suited to the limited intelligence of our boys, appears to invite the development of this industry.

We have replaced many of the old wooden walks and steps with finely constructed cement work. The short period of service and higher price of lumber make it inexpedient to replace with the original material.

The local telephone wires, forming an unsightly cable from building to building, have been placed in a new cement tunnel, out of sight and readily accessible for repairs as needed.

A new apple orchard has been planted, as we find this fruit grows well in this climate.

The new dining hall has been decorated.

The quarrying of all of the rock needed for the concrete walls, tunnels and floors of all of the new buildings, amounting to many hundreds of loads, has been done by our boys, under the direction and instruction of a single attendant.

HOME FOR THE FIDDLER MINDED-COTTAGE.

Superintendent's Report.

In our schools are taught such branches as are taught in the lower grades of the City Schools. The higher studies are not attempted. Our children learn much more slowly than the normal child, and it is impossible for them to fix their attention for as long a period as those of more stable mind. Their progress is correspondingly slower. Even had they the memory and nervous endurance to attack these higher branches, they have not the mentality to apply them in their daily lives, and they are readily forgotten.

The best education is the acquiring of such knowledge as can be used for the future usefulness and happiness of the individual. With this fact in view, manual training, whose value is now recognized in every good school system, became a prominent factor early in the history of the education of the feeble minded, and its scope has increased as its great value has become more appreciated. This system is applied to our children's daily work. They are taught the importance and dignity of labor and they take pride in the duties assigned them. It is about our only and effective method of punishment with our older charges, to impose absolute rest in day room, or dormitory, without the privilege of taking part in the daily life of the Home. The efficiency of this system with our most refractory charges demonstrates, as nothing else could, their enjoyment of the industrial and social privileges in their lives here, and shows the narrow life of a purely "care taking" system. None of our charges are expected, or allowed, to overwork. The duties of our older and stronger boys and girls, who work several hours each day on the farm, or at various household duties, are carefully overseen and directed, as are those of the young child who does her tiny task before school.

Band and orchestra practice, sloyd, or other hand work, classes in fine needle work, lace and basket making, or simply rest periods, come into each day to prevent overwork, and to bring not only enjoyment, but the increased refinement in the child's taste, and added ability to do work well.

In the evening, general dances, or other entertainment, is given at least once a week. The opportunity which the Cottage system gives for careful grouping of children of the same

Home for Feeble-Minded.

mental grade adds much to the social possibilities of our charges.

In the evenings they will be found in congenial groups, entertaining themselves and each other with music, reading, games, small parties, or other diversions, to close each day. No expedient has been spared to make our children's residence as much like home life, as is possible in an institution.

Industrial pursuits of the institution are not conducted for profit. Its wards are, as a rule, incapable of working independently, and their work must be planned and supervised. They are slow in movement as in thought, and they accomplish much less than the average normal worker. In consequence, the cost of their oversight increases as their field of usefulness extends, and the per capita cost of their care does not materially lessen, and the principal thing gained is a broadening of their enjoyment of life, to compensate in some measure for the affliction of which they are the blameless victim.

Without instructors to encourage and direct them, they cease their efforts. Several of our brightest boys have left our care and have started out to earn their way unaided. They have either returned to ask for shelter, or have been returned, having become public charges, or have taken to the road as tramps. I have not yet learned of a single case, in those children I have traced, who has become a desirable unit in the community.

Our industries are the foundation of our children's happiness. It saves them from the mental degradation which is inseparable from absolute idleness. To abolish all means of employment would remove the best means of elevating these afflicted ones to the highest point of enjoyment and self respect they are capable of reaching. It would abolish the pride our children feel in their work, and rob them of one of life's greatest blessings, the consciousness that they take, and fill, a place in the world's work.

This line of education is generally endorsed by those whose long and successful experience, and many years of study, entitle their opinions to respect. It keeps our children contented. It would be safe to say that 95% of our charges show no desire to leave their home here. As time passes, a

Superintendent's Report.

smaller proportion of parents remove their children. Some of them state the reason that their children miss the friends they have made in the institution, and find no congenial companionship in the midst of people intellectually above them.

Discontent rarely exists among our children, except among those born with the wandering instincts; those who are restrained by care, which is no more than parental, from following their animal desires; and those in whom discontent is created by the unwise counsel of persons who urge them to go out into the world, absolutely ignorant of how unfit they are to help themselves over life's hard places.

The buildings now in progress, when finished, will do little more than accommodate the waiting cases. While the birth of this class must be materially lessened by the protection which the State has given the high grade imbeciles of child bearing age, and may be still further curtailed by wise legislation, still further provision will be needed. It would be of doubtful wisdom to increase the population here. The economy achieved by maintaining more than 1000 in one institution is very inconsiderable. It is more than balanced by the diminished care of details which the management is compelled to give to a larger number. More than that, it is hardship to the public that an institution should be at a great distance from the residence of its inmates. In the writer's opinion, the interests of the children and the public will be better served by starting a second institution in some portion of the State distant from this location.

The character of the new institution is also worthy of thought. Three classes are found in modern institutions for the feeble minded. The unimprovable, requiring custodial or hospital care; the feeble minded proper, or imbeciles, who are capable of being developed to some material extent; and lastly, the epileptic.

The question arises whether these should be cared for in separate institutions, or in a general institution. The latter proposition is more generally adopted. It goes without saying that they should be cared for in separate buildings, and that the different groups should not intimately mingle.

Home for Feeble-Minded.

In a very few states they have gone further and advocated a separate institution for each class. This seems unnecessary. Questions as to which group they would belong would be continually arising.

A certain number of epileptics, and also the brighter class of feeble minded are continually retrograding, making frequent transfers necessary. In institutions distant from each other, this is a cause of considerable trouble and expense, and on that account, might not be properly attended to. Segregation can be practiced as completely at a distance of two hundred yards, as it can be at an equal number of miles. By two or more general institutions of this kind, inmates can be housed near their families, and save much expense to Counties in the way of transfers.

Much has been said of the necessity of the segregation of epileptics. Epilepsy and mental deficiency are as closely associated as branches on the same tree. They are both evidences of disturbed brain action; in one case, interfering with the functions of that portion of the brain devoted to thought and its essential faculties; in the other, occasioning a disturbance of that portion of the same organ which controls muscular movements and subjects them to the will.

Over one-half, and perhaps two-thirds of all the feeble minded are subject to convulsive seizures at some period of their lives, and we are never surprised at the appearance of epilepsy in any feeble minded person. On the other hand, so small a percentage of epileptics maintain normal mental action as to be hardly worth consideration. In one report of a State institution for epileptics in New York, the Superintendent classified only four out of several hundred as being regarded as absolutely normal. Even those who retain a normal mind in the early stages of disease, almost infallibly becomes imperfect later. This emphasizes the difficulty which would ensue in trying to separate the feeble minded from the epileptic.

While the individual with occasional spasms might be a detriment among excitable insane inmates, and while there is no doubt that adult epileptics are inclined to be vicious and

Superintendent's Report.

difficult to control, this is not of so much importance among children. The occurrence of a fit fails to arouse any especial excitement, or even interest, among our children. They would watch with amusement the almost hysterical excitement in persons who view this nervous phenomenon for the first time. All of our more experienced children will attend to the simple needs of an epileptic with the adeptness and coolness of a nurse.

It has been claimed that the presence of epileptics among non-epileptic children may induce convulsions in the latter class. If this ever occurs, it must be rare. In twenty-five years of continuous service, I have never seen such a thing occur.

I would, therefore, advocate that no separation be attempted in these classes, except as is afforded by the Cottage system of the modern institution.

Another point calls for earnest consideration. In this, as in other institutions, there are at least twice as many applications for unimprovable children as there are for the school grade. Naturally there are very few changes from the custodial department to that of the school grade. Children afflicted with epilepsy especially, almost invariably tend to retrograde. Many of the school cases, especially those whose infirmity comes through disease, rather than heredity, drift into custodial care. The demand, therefore, for buildings for the feebler type will be much greater in the next few years, than for school cases. Moreover, this institution can probably care for most of the school cases applying in the immediate future. I would, therefore, suggest for your consideration, that the custodial buildings of the next institution be built first, as was the case in this one.

The new cottages now in process of erection, will complete the institution as originally designed, with these exceptions, First, a hospital building. This was asked of the last Legislature, but it was not allowed on account of the more immediate need of devoting all available funds for the erection of dwelling houses for the several hundred waiting cases. We have been able thus far, to care for the sick in the two small

Home for Feeble-Minded.

rooms available for this purpose. With the early increase of our number by nearly three hundred new inmates, this will be no longer possible. We should have a building especially adapted for this purpose. After careful consideration of our past needs, and investigation, by inquiry and personal inspection, of hospitals of similar institutions, I would recommend that a small hospital with twenty beds be built. I am confident that this will supply the demand for such provision. A number of empty beds, in a too large hospital, is an almost irresistible temptation to move in helpless children from the custodial room. Their unclean habits make them most undesirable associates for the brighter sick children, which would be forced into close association with them.

Another need is a second school house. Owing to lack of adequate space in the regular school rooms, we have been compelled to occupy the school house cellar. This is not properly lighted, nor is the ventilation the best. Owing to the springy nature of the soil, these rooms are damp at certain seasons of the year. We have, furthermore, been compelled to take a room from one of our custodial buildings, which is needed for a nursery. We are using a dining room in a cottage which we will soon have to use to segregate cases of epilepsy, when we will be obliged to recall this room for its legitimate purpose.

These facts will demonstrate fully the necessity for the early erection of these two buildings.

While the excess of demand over supply for workers throughout the country affected this institution to some extent, we have been fortunate in retaining many of the officers and employees through several years of service, and their influence and experience keep up the quality of the care of our inmates in times of temporary shortage. To them, and to those whose terms of service have been shorter, but whose interest has been no less earnest, I beg to express my appreciation.

For the ready endorsement of the Board of every proposition for the promotion of the enjoyment and comfort of the children; for their support of all measures to shield our weak willed charges from social responsibilities they could not com-

Superintendent's Report.

prehend and dangers they would not know how to avoid, by prolonging the guardianship of the State, where other competent guardianship could not be assured. I beg to extend my grateful thanks.

This guardianship will curtail the number of defectives born, and consequently the amount of poverty, crime and suffering incident to their existence, which is only beginning to be understood. Coming generations will profit largely by, even if they do not fully appreciate the saving foresight of the Board in this policy.

Respectfully submitted,

A. W. WILMARTH,

Superintendent.

4. Ordinary repairs.....	3,574 25	2,488 50
5. Office, domestic and out door expenses..	12,252 48	24,757 02
Total.....	\$119,000 38	\$131,325 97
Extraordinary expenses:		
1. New buildings, lands, etc.....	\$7,464 89	\$94,203 66
2. Permanent improvements to existing buildings.....	21,758 63	17,041 98
Total.....	\$148,223 90	\$242,571 61

Notes on current expenses:

1. Salaries and wages should include salaries of trustees or directors, if any.
2. Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
4. Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
5. This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

Superintendent, A. W. Wilmarth.

SIXTH REPORT.

OF THE

WISCONSIN STATE REFORMATORY

FOR THE

BIENNIAL PERIOD ENDING JUNE 30, 1908.

S. W. GOSS.....	Foreman

SUPERINTENDENT'S REPORT.

GREEN BAY, July 1, 1908.

To the State Board of Control:—

I respectfully beg leave to present to you my report for the biennial period beginning July 1, 1906, and ending June 30, 1908. This is the sixth report issued from this institution since it was opened in August, 1898, when twenty-eight prisoners were transferred from the State Prison at Waupun forming the nucleus of a population which has since grown to approximately 300 inmates.

MOVEMENT OF POPULATION.

The inmate population has varied considerably during the biennial period covered by this report. On July 1, 1906, there were 283 inmates. Until that date the average population had been steadily increasing for several years with slight fluctuation. At that date, however, the average monthly population began to decrease, and continued to decrease with but little variation until for December, 1907, it reached the low mark of 252—the lowest it has been for two years, while the lowest record for any one day of that month was 247. From that date the population began to increase quite rapidly until in May, 1908, it had risen to 296—the full capacity of the cell house, and it has remained very close to our cell capacity ever since, despite the fact that the paroling of inmates was considerably enlarged in order to make room for those in county jails awaiting admittance. The prospects are that so soon as we complete the main central building, it will be desirable to begin the construction of the south cell wing in order to take care of the prospective population, unless the present agitation against the average saloon shall render more sleeping accommodations unnecessary. We have sleeping ac-

Wisconsin State Reformatory.

commodations for 296 inmates and the law wisely provides that no more than this number shall be received, thus avoiding the necessity of placing more than one inmate in a cell.

THE REVENUES.

The revenues of the institution have fallen off somewhat during the past year while the current expenses have somewhat increased. This was the natural outcome of conditions over which we had no control. In the first place, during the autumn of 1906 and up to July 1, 1907, there were thirty-five or forty idle inmates daily who could not be employed, either at revenue producing industries or upon permanent improvements, for the reason that the revenue producing industries had their full quota of men and the previous Legislature had failed to pass any appropriation for the purchase of material for the making of permanent improvements. Then, also, the business depression that began in the fall of 1907 seriously curtailed the demand for the goods we were manufacturing and the contractors who receive our products were unable to supply us with the usual amount of orders.

Fortunately in this business crisis the gratifying liberality of the last Legislature enabled us to turn our attention in the direction of new buildings and much needed permanent improvements. These appropriations amounted to \$84,500.00 to be expended as follows:

For the purchase and shipment of granite for use in future buildings; for the purchase of steel, cement, and other materials for erecting the rear portion of the main administration building; for the equipment of a machine shop; for the establishment of a molding plant; for the purchase of appliances for a tin shop; for the construction of a reservoir.

Estimates indicate the requirement of about 50,000 cubic feet of granite in the rough which has been shipped in from the granite quarries at Amberg. A large class of our boys is now at work cutting and fashioning this granite under an expert instructor. This affords the boys thus engaged the opportunity to learn an excellent trade while saving the State a large amount of money.

Superintendent's Report.

THE MAIN BUILDING.

The excavating for the main central administration building was carried on through the past winter with scarcely any interruption on account of weather, and as soon as the spring opened work was commenced on the concrete footings and brick laying until at present writing the building has reached the first story above the basement. More than fifty boys are employed at concrete and cement work, brick laying and carpentry, while the iron grill work is all being turned out of our own blacksmith shop and machine shop, thus adding still further to the number of inmates who are gaining valuable experience in practical mechanics, and I venture to assert that our granite cutting, brick laying, concrete work, machine work, carpentry, etc., will equal in quality similar work done by free labor, and at a very large saving of cost to the State.

The building now under construction will add very materially to the facilities of the institution. The front portion will contain the administration offices, the dormitory for those officers who reside at the institution, and a large auditorium capable of seating 1,200 persons. Back of this section will be a large rotunda into which the present and all future cell houses will open. The ceiling, 25 feet high, will be supported by a row of huge columns finished in marble and scagliola. The rotunda will have marble wainscoting and tiled floor. Over the rotunda will be two large lecture rooms. To the rear of the rotunda and forming the central section of the building will be fifteen class rooms for school and instructional purposes. The upper story of this section will contain a gymnasium and drill hall 105 by 60 feet in dimensions. Back of the class rooms and forming a rear transept will be the dining room and kitchen, the former having a capacity sufficient to seat 1,000 inmates at one time. The kitchen with its bakery and cold storage attachment will be fitted with all the latest improvements. A portion of the 15-foot basement under this spacious structure will be fitted up as a bath room, with fifty shower baths encircling a large swimming pool while other portions of the basement will be devoted to stor-

Wisconsin State Reformatory.

an acre. This was acquired as was also a small tract of 34 acres mostly of brick clay on which a brick yard was established for the manufacture of our own brick.

There still remains to the south of us, and lying next to our buildings, a tract of 80 acres which should be added to our domains. The extent of woods and marshes included in the original purchase leaves our tillable lands even at present much less in extent than is necessary for a growing institution of this kind where farming, gardening and dairying should be one of the chief industries. Our fine herd of Holstein cows is so rapidly increasing and the market demands for our surplus vegetables and garden truck so inviting that not only the question of suitable employment for inmates but that of agreeable revenues urges most strongly the desirability of acquiring as soon as possible the land lying next south of us, especially since the owners of it are about to plat it with a view of selling it off in suburban lots. To have suburban settlements pressing upon our very doors, with a large number of trustees roaming over the farm without guards would be very damaging to the discipline and reserve of the institution. I cannot, therefore, urge too strongly the pressing necessity of acquiring the 80 acres of land before mentioned lying next to our buildings on the south, and trust that the Legislature, with rare foresight and business acumen, may be induced to make the necessary appropriation therefor. As this tract is now held at exorbitant figures it may be necessary to resort to commendation proceedings.

MACHINE SHOP.

During the past few months we have installed a fine machine shop in a section of the new power house reserved for that purpose. The shop is equipped with lathes, drill presses, planers, milling machine, punching and shearing machines, grinders, sawing and cutting tools, pipe cutting and threading machines, with the necessary work benches, vises and tools for hand work, making the shop quite complete in every respect. It is needless to say that the machine shop has been

Superintendent's Report.

busy with the large amount of work in iron which our present building operations require.

THE BRICK YARD.

Our brick yard the past two seasons has turned out a large accumulation of brick for present and future use thus adding greatly to our home made supply in the building line and saving a considerable cost to the State in this essential item.

A HOG PALACE.

During the summer of 1907 we erected a new hog house on the river bank at a suitable distance from the institution. The structure is quite unique in its appointments. The pens have concrete floors and outer walls, with brick for the superstructure. The pens are separated by heavy wire screens swinging on pivots so that any number of pens may be thrown into one. The feeding troughs are of concrete molded into the corridor walls and there is an artesian water faucet over every feeding trough, and drainage from every pen, so that any part may be flushed with the hose. Ventilators extend through the roof from every pen. The house will accomodate 200 hogs which is about the average number we keep. The structure was erected by our own boys and the brick, of course, came from our own brick yard.

MAIN SEWER.

The small winding sewer only six inches in diameter upon which we have apprehensively depended for the drainage of our whole institution for so long was replaced during the past winter with a twelve inch sewer of vitrified pipe running directly to the river with a fall of 35 feet in a distance of 1,400 feet into which our sewage has been turned, thus securing to us a most excellent drainage system.

Wisconsin State Reformatory.

WAGES TO INMATES.

Under our system of paying inmates for their labor the amount of daily wages paid to them for the year ending June 30, 1907, was \$8,942.09 and for the past year \$7,736.18. During the same time the inmates earned in addition thereto, as overtime, for the two years respectively \$2,753.05 and \$2 561.-37. This makes a total of \$21,992.69 we have paid inmates for labor during the biennial period, over and above their board. Of course this adds materially to our current expense account.

WHAT WE HAVE MADE.

Aside from the permanent improvements made by inmate labor, and such furniture and other appliances as we fabricate for home uses, we manufactured during the year ending June 30, 1907, 99,298 dozen garments in the overall factory, and for the past year 77,655 dozen. In the broom factory we turned out 7,902 dozen brooms during the first year and 8 238 dozen during the second year of the biennial period. We have also made in our tailoring and shoe departments the following list of goods for our own needs in the institution:

During the year ending June 30, 1907: 11 officers' uniforms, 5 pairs officers' trousers, 3 officers' coats, 3 officers' vests, 127 pairs of leather shoes, 17 pairs of cloth shoes, 108 outgoing suits for inmates, 56 first grade coats, 88 first grade trousers, 41 second grade coats, 54 pairs second grade trousers, 98 first grade caps, 81 second grade caps, 167 work shirts, 6 pairs duck trousers for waiters, 10 table cloths for officers' dining room, 41 kitchen aprons, 265 pillow slips, 39 napkins, 125 sheets, 116 towels, and repaired 581 pairs of shoes.

During the year ending June 30, 1908: 16 officers' uniforms, 170 pairs leather shoes, 32 pairs cloth shoes, 160 outgoing suits for inmates, 47 first grade coats, 88 pairs first grade trousers, 74 second grade coats, 93 pairs second grade trousers, 86 first grade caps, 41 second grade caps, 492 work shirts, 24 duck coats for waiters, 11 table cloths for officers' dining room, 147 kitchen aprons, 502 pillow slips, 9 napkins, 563 sheets, 745 towels.

Superintendent's Report.

During each year we have turned out from 500,000 to 750,000 sand mould bricks in our brick yard. A statement of the farm and garden products raised will be found in another place in this report.

READING MATTER.

Although the report of the librarian shows that respectively 7,311 and 8,290 books were drawn from the library during the two years of this biennial period, this does not indicate the amount of reading compassed by the inmates. There are upwards of 1,500 books in the cells owned by the inmates themselves and purchased out of their own earnings. Many of the inmates are collecting large and valuable libraries of their own which they take pride in carrying with them when they go out. In addition, the inmates are allowed the daily newspapers and the magazines which afford much reading, and many contributions of old magazines and other reading matter are constantly received and distributed. It is gratifying to note the zeal for reading manifested by the inmates.

Although our school room facilities are wholly inadequate we have maintained our daily recitations as usual and the school has been doing a good work. Many instances might be cited of inmates who came here totally illiterate and have gone out able to read and write excellently.

In order to give an idea of the character of meals served to inmates I append the bills of fare taken at random from the midwinter and midsummer schedules of 1908.

Superintendent's Report.

January 23, 1908.

Breakfast—Fried bacon and liver, fried potatoes, bread, tea, milk, syrup.
Dinner—Baked pork and beans, potatoes, stewed onions, beets, bread, bread pudding with lemon sauce, water.
Supper—Frankfurth sausage, baked beans, bread, tea, milk, syrup.

January 24, 1908.

Breakfast—Oatmeal mush and milk, bread, butter, tea, syrup.
Dinner—Fresh fish, milk gravy, potatoes, stewed rutabagas, cucumber pickles, bread, cottage pudding with spice sauce, water.
Supper—Hot wheat rolls, apple sauce, bologna sausage, bread, tea, milk, syrup.

January 25, 1908.

Breakfast—Fried pork sausage, gravy, steamed potatoes, bread, tea, milk, syrup.
Dinner—Roast beef, brown gravy, potatoes, sauer kraut, stewed carrots, bread, baked rice pudding, water.
Supper—Frankfurth sausage, sauer kraut, bread, tea, milk, syrup.

January 26, 1908.

Breakfast—Fried bacon and liver, gravy, fried potatoes, bread, tea, milk, syrup.
Dinner—Roast beef, brown gravy, boiled pork and cabbage, stewed carrots, cucumber pickles, bread, suet pudding with nutmeg sauce, water.
Supper—Bologna sausage, ginger cake, bread, tea, milk, syrup.

January 27, 1908.

Breakfast—Fried pork sausage, gravy, fried potatoes, bread, tea, milk, syrup.
Dinner—Roast beef, brown gravy, baked pork and beans, potatoes, stewed parsnips, cucumber pickles, bread, bread pudding with spice sauce, water.
Supper—Beef steak, potatoes, baked beans, bread, tea, milk, syrup.

January 28, 1908.

Breakfast—Beef steak, brown gravy, steamed potatoes, bread, tea, milk, syrup.
Dinner—Roast beef, brown gravy, potatoes, sauer kraut, stewed carrots, cucumber pickles, bread, rice pudding, water.
Supper—Hot wheat rolls, apple sauce, sauer kraut, bread, tea, milk, syrup.

January 29, 1908.

Breakfast—Fried pork sausage, gravy, fried potatoes, bread, tea, milk, syrup.
Dinner—Roast beef, brown gravy, potatoes, stewed rutabagas, stewed onions, cucumber pickles, bread, suet pudding with lemon sauce, water.
Supper—Veal stew potatoes, rutabagas, bread, tea, milk, syrup.

Wisconsin State Reformatory.

June 15, 1908.

Breakfast—Beef steak, brown gravy, steamed potatoes, bread, cereal coffee, milk, syrup.
Dinner—Pea soup, baked pork and beans, boiled potatoes, bread, cottage pudding with vanilla sauce, water, syrup.
Supper—Beef hash, bread, tea, milk, syrup.

June 16, 1908.

Breakfast—Fried bacon, gravy, fried potatoes, bread, cereal coffee, milk, syrup.
Dinner—Roast beef, brown gravy, steamed potatoes, spinach, green onions, bread, baked rice pudding with lemon sauce, water.
Supper—Warm biscuits, rhubarb sauce, bread, bologna sausage, tea, milk, syrup.

June 17, 1908.

Breakfast—Fried pork sausage, gravy, hashed brown potatoes, bread, cereal coffee, milk, syrup.
Dinner—Boiled ham, baked beans, gravy, steamed potatoes, bread dressing, bread, suet pudding with orange sauce, water.
Supper—Veal stew with potato dumplings, bread, tea, milk, syrup.

June 18, 1908.

Breakfast—Fried bacon, gravy, fried potatoes, bread, cereal coffee, milk, syrup.
Dinner—Roast beef, brown gravy, steamed potatoes, lettuce with sugar and vinegar, bread, radishes, bread pudding with lemon sauce, water.
Supper—Beef hash, bread, tea, milk, syrup.

June 19, 1908.

Breakfast—Oat meal mush and milk, fried potatoes, bread, butter, cereal coffee, syrup.
Dinner—Fried fresh fish, gravy, boiled potatoes, mashed rutabagas, green onions, bread, suet pudding with nutmeg sauce, water.
Supper—Hot wheat rolls, apple sauce, bologna sausage, tea, milk, syrup.

June 20, 1908.

Breakfast—Frankfurth sausage, milk gravy, steamed potatoes, bread, cereal coffee, milk, syrup.
Dinner—Baked pork and beans, steamed potatoes, gravy, lettuce with sugar and vinegar, bread, rice pudding with cream sauce, water.
Supper—Beef stew with vegetables, bread, tea, milk, syrup.

June 21, 1908.

Breakfast—Fried bacon, gravy, fried potatoes, bread, cereal coffee, milk, syrup.
Dinner—Roast beef, brown gravy, steamed potatoes, mashed rutabagas, radishes, bread, suet pudding with lemon sauce, water.
Supper—Bread, cheese, coffee cake, tea, milk.

Superintendent's Report.

EMPLOYMENT.

The employment of inmates has been variable owing to the different kinds of work going on. Occasionally large crews are switched from building and other employment to work on the farm and garden in weeding or harvest time, and from outside to inside work as the exigencies of the time may require. Very few occupations have been steady. The following summary for the current month will give a general idea of the division of labor usual in the institution.

Barn, farm and garden	10	to 50
Blacksmith shop	3	to 5
Bookkeeping	4	
Brick laying	16	to 20
Brick yard	18	to 24
Broom factory	14	
Concrete and construction	20	to 50
Excavating	12	
Granite cutting	16	
Kitchen and dining room	17	
Laundry	3	
Machine shop	2	to 5
Office	3	
Overall factory	120	to 130
Power house	4	to 6
Painting	2	to 4
Tailoring	10	
Shoe making	2	
Tier tendres	5	

MUSIC.

Music is still one of the chief features of our institution. The military band of 35 pieces keeps up its high standard and altogether 50 to 60 inmates are taking lessons on musical instruments. A class of from 50 to 60 inmates receives vocal instruction from Prof. North of Green Bay and a choir of 30 voices furnishes the special music for church services Sunday afternoon. This musical talent furnishes the basis for an occasional concert and entertainment by the inmates.

GENERAL HEALTH.

Generally speaking, the health of the inmates has been good. We have had no contagious diseases to contend with except,

Wisconsin State Reformatory.

perhaps, an occasional case of tuberculosis. In such cases the patient is usually sent home on invalid parole as soon as the symptoms become authenticated. There have been three deaths from tuberculosis, during the past two years, of inmates who had no home or friends to send them to.

IN CONCLUSION.

In conclusion I desire to extend my thanks to his excellency the governor and to the State Board of Control for their uniform courtesy and co-operation in all matters pertaining to the management and welfare of the institution.

Respectfully submitted,

C. W. BOWRON,
General Superintendent.

Statistical Tables.

STATISTICAL FORM STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of
Charities and Corrections, adopted May 15, 1906.

Name of institution, Wisconsin State Reformatory.

Population.	1907.	1908.
Number of inmates at beginning of year.....	283	270
Number received during the year.....	163	216
Number discharged, paroled or died during the year ..	176	194
Number at end of year.....	270	202
Daily average attendance (i. e., number of in- mates actually present) during the year.....	280	270
Average number of officers and employes during the year	28	31

EXPENDITURES.

Ending June 30	1907.	1908.
Current expenses:		
1. Salaries and wages	\$20,360 24	\$16,948 79
2. Clothing.....	2,072 45	2,427 77
3. Subsistence	13,402 35	15,347 57
4. Ordinary repairs.....	780 60	171 56
5. Office, domestic and outdoor expense.....	5,232 58	2,993 63
Total.	\$41,848 22	\$37,889 32
Extraordinary expenses:		
1. New buildings, lands, etc.....		37,098 69
2. Permanent improvements to existing build- ings.....	38,874 36	37,007 42
Total.	\$80,722 58	\$111,995 43

Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
- Clothing includes shoes, and also materials for clothing and shoes if they are manufactured in the institution.
- Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
- This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

Superintendent, C. W. Bowron.

FIRST BIENNIAL REPORT

OF THE

WISCONSIN STATE TUBERCULOSIS
SANATORIUM

FOR THE

BIENNIAL PERIOD ENDING JUNE 30, 1908

OFFICERS

DR. C. A. PAULL.....SUPERINTENDENT
FRANK X. SCHOEN.....STEWARD
LEVINA S. DEITRICHSONMATRON

SUPERINTENDENT'S REPORT.

To the State Board of Control:

I have the honor to present herewith the first report of the State Tuberculosis Sanatorium.

My duties beginning April 1, 1907, I am unable to make any report prior to that time. At this time there were under construction the following: Administraion Building, Refectory, Power House and two cottages for patients. These were completed during the following summer and early fall. Work was also begun, at this time on the Laundry, Stable, Root Cellar, Pump House and two additional cottages for patients. This was from the appropriation of \$30,000 granted by the Legislature of 1907. These buildings were sompleted during the winter and spring of 1908.

The Sanatorium was opened for patients on November 7, 1907. Since then there have been admitted 113 patients. Of this number 62 have been discharged, leaving in the Sanatorium June 30, 1908, 51 patients. Of the 62 discharged patients 14 remained at the Sanatorium less than one month and are therefore not reported on in the statistical table, because no definite statement can be made regarding the pulmonary condition in such a short time. This leaves us 48 to be reported on. Of this number 4 have been sent to their homes as apparently cured and 12 have had the disease arrested. The classification of cases has been in accordance with the one adopted by The National Association for the Study and Prevention of Tuberculosis and is as follows:

Incipient—Slight initial lesion in the form of infiltration limited to the apex of one or both lungs, or a small part of one lobe.

No tuberculosis complications. Slight or no constitutional symptoms (particularly including gastric or intestinal disturbance or rapid loss of weight).

Slight or no elevation of temperature or acceleration of pulse at any time during the twenty-four hours, especially after rest.

Expectoration usually small in amount or absent.

Tubercle bacilli may be present or absent.

Wisconsin State Tuberculosis Sanatorium.

Moderately Advanced—No marked impairment of function, either local or constitutional.

Localized consolidation moderate in extent with little or no evidence of destruction of tissue.

Or disseminated fibroid deposits.

No serious complications.

Far Advanced—Marked impairment of function, local and constitutional.

Localized consolidation intense.

Or disseminated areas of softening.

Or serious complications.

Acute Miliary Tuberculosis, Unimproved—All essential symptoms and signs unabated or increased.

Improved—Constitutional symptoms lessened or entirely absent; physical signs improved or unchanged; cough and expectoration usually present.

Arrested—Absence of all constitutional symptoms, expectoration and bacilli may or may not be present; physical signs stationary or retrogressive; the foregoing conditions to have existed for at least two months.

Apparently Cured—All constitutional symptoms and expectoration with bacilli absent for a period of three months; the physical signs to be those of a healed lesion.

Cured—All constitutional symptoms and expectoration with bacilli absent for a period of two years under ordinary conditions of life.

As our law now reads, we are obliged to take in rather advanced cases, cases that need hospital attention. As we have no suitable place for such cases, they have to be put in the cottages with the others. At one time last winter it was necessary to use the Reception Room and Matron's Office in the Administration Building for some very sick cases. It is also very depressing to the others in the cottages to have the very sick persons near them, to say nothing of its not being a suitable place for the advanced cases. Also there should be a place where the patients could be put on entrance and so have them under closer observation. An Infirmary would answer for both purposes, and I would recommend that such a building be built at an estimated cost of \$15 000.

More cottages for patients will shortly be needed. Our present cottages are now nearly filled and applications are being received daily. Since last November we have had an average increase of over 6 patients per month. At this ratio we will need to increase our present capacity of 80 to 150, which is the present capacity of the patients' dining-room. For cottages for these 70 patients we will need \$17,000. At present

Superintendent's Report.

the patients use one end of the dining-room for an amusement hall, but this will not much longer be feasible from the rapid growth of the Sanatorium. We will soon need a separate building for this purpose at an estimated cost of \$10,000.

A bakery is greatly needed. This should be built for \$1500. At present there is no place for the employees to gather and their present temporary dining-room is crowded. An addition to the Refectory would solve this problem. The estimated cost of this addition would be \$3500. A piazza should be built on the front of the Refectory where the patients could congregate, at present there is no place where they can come together. This ought to be built for \$500.

The money appropriated for the Superintendent's Residence had to be spent for other things, so the Residence has not been built. I would recommend that \$10,000 be appropriated for this purpose.

Our present Coal Shed is inadequate and I would recommend that \$1500 be appropriated for enlarging the same. There should be cottages for the employees. These would cost \$5000. Much is needed to be done in grading and improving the grounds; an estimated cost of this work would be \$10,000.

Summary.

Infirmary	\$15,000 00
Cottages for patients	17,000 00
Amusement Hall	8,500 00
Bakery	1,500 00
Addition to refectory	3,500 00
Piazza on refectory	500 00
Superintendent's residence	10,000 00
Addition to coal shed.....	1,500 00
Cottages for employees	4,000 00
Grading, etc.	10,000 00
	<hr/>
	\$71,500 00

In conclusion I wish to take this opportunity to thank your Honorable Body for the counsel and advice so cheerfully given and for the courtesy shown me at all times.

Respectfully submitted,

CHESTER A. PAULL,
Superintendent and Steward.

Wisconsin State Tuberculosis Sanatorium.

Number received during the year.....		113
Number discharged, paroled or died during the year.....		62
Number at end of year.....		51
Daily average attendance (i. e., number of inmates actually present during the year).....		30
Average number of officers and employes during the year.....		20

EXPENDITURES.

Ending June 30	1907.	1908.
Current expenses:		
1. Salaries and wages.....		\$7,972 43
2. Clothing.....		67
3. Subsistence.....		1,558 28
4. Ordinary repairs.....		98 44
5. Office, domestic and outdoor expenses.....		8,882 86
Total.....		\$18,512 68
Extraordinary expenses:		
1. New buildings, lands, etc.....	\$61,289 64	\$69,307 00
2. Permanent improvements to existing buildings.....		19,728 86
Total.....	\$61,289 64	\$89,035 95

Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
- Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
- Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
- This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

Superintendent, C. A. Paull.

WISCONSIN WORKSHOP FOR THE BLIND.

SECOND BIENNIAL REPORT

OF THE

WISCONSIN WORKSHOP FOR THE BLIND

FOR THE

BIENNIAL PERIOD ENDING JUNE 30, 1908

OFFICERS

Oscar Küsterman.....Superintendent

INSTRUCTORS

William Schroeder.....Instructor

Michael Zanna.....Assistant Instructor

John Henning.....Assistant Instructor

SUPERINTENDENT'S REPORT.

To the Honorable State Board of Control:

GENTLEMEN:—It becomes my duty and pleasure at this time to again submit to you my report, showing the condition and progress of the Wisconsin Workshop for the Blind during the biennial period ending June 30, 1908.

Since my report of two years ago the number of the men employed in the Workshop has steadily increased and it will not be many years before a hundred blind men will earn their living in our institution.

It is greatly to be regretted that we have not the room and the general arrangement which is necessary to do the work practically, properly and economically.

No one owning and operating a willow ware factory would ever think of a cut up arrangement such as we have in our institution, which state of affairs is due only to the fact that our shop rooms and storage rooms are disconnected and that as a consequence we are much hampered in the disposition of all departments to a more proper end.

As it now is the goods must be handled oftener than would be necessary in a workshop specially arranged for our purposes and consequently the blind workmen receive less wages than they would if we had proper facilities.

We have long ago passed the experimental stage and the Wisconsin Workshop for the Blind may well be considered a permanent institution. This being the case the advisability of having proper and permanent quarters should be given due consideration by the next legislature.

Our present yearly rental is \$1284.00 equal to an investment of \$32,100 at four per cent, at which rate the State could procure the money. About \$35,000 to \$40,000 used for the purchase of suitable property or the building of a factory would not materially increase the annual expense to the State,

Wisconsin Workshop for the Blind.

while it would be of great benefit to the blind workmen and the means of doing more and better work.

Taking into consideration that for the past two years we have been handicapped by the fact that all our rooms are separated and disconnected we have nevertheless been advancing steadily as seen from the following figures:

During the year 1903-1904 we paid to the workmen \$403.61; 1904-1905 \$2327.80; 1905-1906 \$4328.29; 1906-1907 \$5430.54; and the year 1907-1908 \$7852.80. This will make in the year 1907-1908 a total weekly average of \$6.44 $\frac{3}{4}$ for all men employed.

The sales for the year 1903-1904 amounted to \$850.18; 1904-1905 \$3,042.21; 1905-1906 \$6,110.29; 1906-1907 \$11,157.10 and in the year 1907-1908 to \$14,808.96.

We manufactured in the year 1903-1904, 2870 buggies and 1020 baskets; in 1904-1905, 4497 buggies and 4903 baskets; 1905-1906, 1532 buggies and 8676 baskets; in the last two years June 30, 1906-1907 we made 922 buggies and 13,113 baskets and in the year 1907-1908, 17,898 baskets.

It is to be regretted that so little willow is raised in this country and we are still obliged to buy the greater part of our supply from Europe.

I was in hopes that other State institutions would follow the good example set by Dr. W. A. Gordon, Supt. of the Northern Hospital, who now annually furnishes us with about 10,000 lbs. of willow at 5 cts. per pound.

If a few acres of land be set apart for the raising of willow in every institution it would not only be a good source of income for the institution but also a great help to our workshop.

Until this is done generally by our institutions we are obliged to buy outside and as our room for storing willow is limited we must buy in small quantities and so are unable to take advantage of the greatly varying market price. With proper building and sufficient room for storing our material, we could save a considerable amount to the workmen and the State.

The investment in material and tools by the State for the

WORKSHOP FOR THE BLIND—BASKET MAKERS AT WORK.

WORKSHOP FOR THE BLIND—SAMPLE ROOM OF BASKET SPECIALTIES.

Superintendent's Report.

year 1906-1907 was \$3376.25 and for the year 1907-1908 \$1339.67.

The expense of the State for the yeear 1906-1907 amounted to \$4703.21 and for the year 1907-1908 to 4644.98 this including the rent.

With 30 to 35 men employed in the workshop, the average expense to the State for each one has been from \$106 to \$117 per year, less than half the amount expended in similar institutions of other states in the Union.

How well the authorities in other states think of the work done in the Wisconsin Workshop for the Blind is best seen from the report lately made by a committee appointed by the New York Legislature which reports as follows:

"One of the most interesting and so far most successful experiments in endeavoring to solve the question of how best to aid the adult blind is that which has been conducted since 1903 in the city of Milwaukee. While the experiment in Wisconsin has been conducted for about three years only, we believe that it gives greater promise of success than the great majority of experiments in this country on behalf of the adult blind."

Sincerely hoping that you will continue your interest in our Workshop and use your kind influence with the next Legislature to have suitable and permanent quarters provided, I am,

Yours Respectfully,

OSCAR KUSTERMAN,

Superintendent.

Milwaukee, June 30, 1908.

Statistical Tables.

STATISTICS OF PAUPERISM.

For the biennial period ending June 30th, 1908:

Movement of population in poor houses.	1907.	1908.
Number in poor houses at beginning of year.....	1,477	1,444
Of whom were male.....	1,005	1,087
And female.....	382	377
There were received during the year.....	1,045	1,091
Of whom were male.....	881	8,882
And female.....	184	209
There were born in poor houses.....	13	12
Of whom were male.....	8	5
And female.....	5	7
Making the total in poor houses during the year.....	2,535	2,547
Of whom were male.....	1,984	1,984
And female.....	571	563
There were discharged during the year.....	850	856
Of whom were male.....	701	696
And female.....	149	158
There were placed out during the year.....	21	19
Of whom were male.....	12	10
And female.....	9	9
Ran away during the year.....	24	14
Of whom were male.....	24	13
And female.....		1
There died in the poor houses during the year.....	183	157
Of whom were male.....	146	123
And female.....	40	34
Total loss population during the year.....	1,081	1,046
Of whom were male.....	883	844
And female.....	198	202
Number remaining in poor houses at the end of the year.....	1,454	1,501
Of whom were male.....	1,081	1,110
And female.....	373	391

On June 30, 1908, there were 42 county, 1 town and 3 city poor houses in the state

Statistical Tables.

COMPARATIVE TABLE
Showing the total amount expended for poor relief, including the amount expended in maintaining poorhouses, and the outdoor relief administered by counties, towns and municipalities.

	1899.	1901.	1903.	1905.	1907.	Total.	Population 1905.	Average annual cost.	Cost of poor relief to population.
